3. The drop-latches J J, in combination with the mud-tub A, brick-molds *i*, and bar *m*, substantially as shown and described.

4. The radial arms a^1 a^2 a^3 a^4, constructed as described, provided with the adjustable presser-blocks *s s s s*, as and for the purpose specified.

121,451, antedated November 20, 1871.—DIRECT-ACTING STEAM-ENGINE.—Charles P. Deane, Springfield, Mass.

Claim.—1. The secondary valve I, constructed for a continuous movement, substantially as described, and operating to admit steam alternately to opposite ends of its cylinder B, and the secondary piston C, connected with the main valve D, substantially as shown, and without intervening stuffing-boxes, in combination with a constant mechanical connection from the main piston to the secondary valve, whereby a continuous movement of the latter is derived from the reciprocating movement of the engine without an intervening rotary motion.

2. The secondary valve E and its seat, constructed and having ports, chambers, and passages arranged thereto, substantially as described, so as to act conjointly with the main valve, as and for the purpose set forth.

3. The arrangement of the main valve D with the continuously-moved secondary valve and its piston C, and a constant mechanical connection from the main piston to the secondary valve in such manner, substantially as described, that the secondary piston is reversed by the operation of the secondary valve, admitting steam to one end and opening the exhaust to the other end of the cylinder B, and is then brought under the joint control of the secondary and main valves, substantially as and for the purpose set forth.

4. The combination of the secondary piston C and secondary valve I or E with the arm *f*, and the constant connection thereto from the main piston, substantially as and for the purpose set forth.

5. The arrangement of the oscillating eccentric *m*, Fig. 2, with the secondary valve I or E in the manner shown, the eccentric forming a part of the connection from the main piston to the secondary valve, and, like the valve, moved continuously during the whole stroke of the piston.

121,452.—FASTENING DRIVING-BELTS.—Jean Chrysostome Desumeur, Celestin Dudin, Edouard Dudin, and Louis Delacourt, Guise, France.

Claim.—A fastening for driving-belts, composed of the rivet-plate E with wedge-box D, and the perforated wedge H I, the several parts being constructed, arranged, and operating substantially as set forth and described.

121,453.—CHILD'S CARRIAGE.—Edwin Falkingham, San Francisco, Cal.

Claim.—1. The supporting-stand F and the movable body G, mounted as shown, together with the bolding-strap H and the eyes I, substantially as and for the purpose described.

2. The prop or standard J with its inwardly-projecting shaft K for the bows, and the screw-loop M passing into this arm, substantially as and for the purpose described.

121,454.—BINDING-POST SAFE.—Daniel Fitzgerald, New York, N. Y.

Claim.—1. The use of a post with flanges in the construction of safes, in the manner above described.

2. The combination of the flanged post with a safe, or refrigerator, or desk, in the manner above described.

121,455, antedated December 2, 1871.—SUBMARINE ORDNANCE.—Daniel Fitzgerald, New York, N. Y.

Claim.—1. The mortar B, hung on trunnions or stationary in the bottom of the vessel A, so as to be partially submerged in water while it is being discharged, substantially as and for the purposes herein set forth.

2. In combination with the mortar B, the cylinder C, constructed as described, and the space between the two filled with water, substantially as and for the purposes herein set forth.

3. The combination of the mortar or gun B, one or more cylinders, C, and the tube D, provided with a zigzag or corrugated flange, E, all constructed substantially as specified.

4. The arrangement, with the vessel A, of the mortar or gun B, one or more cylinders, C, and the perforated bow *f*, forming an elongation of the gun, all substantially as set forth.

5. The gun herein described, composed of a series of conical or zigzag rings surrounding a central core, substantially as set forth.

121,456.—STREET GAS-LAMP POST.—Simon W. France, Brooklyn, N. Y.

Claim.—1. In combination with a lamp-post constructed substantially according to either of the forms herein described, the bent discharge-pipe *c*, to carry off the drippings without permitting the escape of gas, substantially as shown and described.

2. The lever *e*, cord *f*, and spring *s*, substantially as and for the purpose described.

121,457.—OSCILLATING ENGINE.—Alfred Goulding, Worcester, Mass.

Claim.—1. The arrangement of the cylinder C, the cross-bar E, the end pieces G G, rollers F F, rings M M, and springs N, all constructed and operating as shown, and for the purpose set forth.

2. In combination with the cylinder C, the cross-bar E, the end pieces G G, and rollers F F, substantially as and for the purposes hereinbefore set forth.

121,458.—BRUSH AND BROOM HOLDER.—Solomon G. Groff, Voganaville, Pa.

Claim.—The arrangement of the broom or brush-handle holder A *a*, spring wire and bearings for the rollers in a continous piece, B, in combination with the anti-friction rollers E *e*, suspended and operating substantially in the manner and for the purpose specified.

121,459.—DUMPING-WAGON.—Anthony Iske, Lancaster, Pa., assignor of one-half his right to Hilaire Zaepfel, same place.

Claim.—1. The arrangement of the bearings E E D, hinged to the bolster B of a wagon, in combination with the horizontal shaft L bearing a pawl, H, and pinion K, to operate the ratchet G and rack I, which latter have a raised edge or flange, *i g*, for a slotted head, N, or hook ends on the band M, which embraces the bearings and keeps them in position, all constructed and operating substantially in the manner specified.

2. In combination with said described hoisting device the fulcrum-bolt *a* and bearings *b*, by which the box is hinged to the hind portion of the running-gear of the wagon, in the manner and for the purpose set forth.

3. The arrangement of the end-gate A', hinged above by means of the plates *r* R, with its projecting eye for a pin or key, the catches S on the vertical rails O, the small central gate P hinged to Q, adjusting hooks *p p* for the hanger I on the folding trough, in combination with the catches S S S, the sliding bolt U, staples T, jointed bar V, lever W, adjusted holder *s*, all in relation to each other, substantially in the manner and for the purpose mentioned.

4. In combination with the adjustable hooks *p p* on the central rail O of my hinged end-gate A, the hinged hanger I, connected to the folding trough with its bolt *q* and catch *p*, all arranged and operating in the manner and for the purpose specified.

121,460.—SEWING-MACHINE.—Michael Heinrich Kernaul, Berlin, Prussia.

Claim.—1. The spindle A', conical nuts M M' attached to the ends of the spindle A' and made adjustable, as described, and uprights S S' when arranged, operating together, and applied to a sewing-machine, as and for the purposes set forth.

2. The pressing-finger h^1, when combined and operating in connection with the bobbin *g'*, as and for the purposes described.

3. The pressing-finger h^1 actuated by means of a rod, *h*, operating in combination with the spring h^2 and notched or recessed rim on the driving pulley, substantially as and for the purposes set forth.

4. The notched regulating bush *x*, the pressing-finger h^1, and pin *c*, combined substantially as set forth.

5. The segment B^2 of the loop-check brush, when secured by means of a screw, b^2, having a head fitting into an under-cut groove, L^2, in the standard L, and operating substantially as set forth.

121,461.—WASHING-MACHINE.—Charles Larrabee, Haywood, Cal., assignor of three-fourths of his right to John Yule, same place.

Claim.—The elongated box A provided with the transverse strips or corrugations C, as described, when mounted upon the rockers H, and constructed to operate substantially as herein described.

121,462.—METALLIC HUB FOR WHEELS.—John Monk, Norwich, Conn.

Claim.—1. The construction of a metallic hub with its sleeve-collars, wooden center, screw-cap, and flanges, substantially as shown and described, as and for the purpose hereinbefore set forth.

2. The devices for dishing spokes in wheels with metallic hubs, and giving to them the requisite bearing by means of beveled mortises and beveled spokes corresponding thereto substantially as described, as and for the purpose herein set forth.

121,463.—HOISTING APPARATUS.—Jesse Nicholson, Monticello, Ind.

Claim.—1. The coal-box A when constructed in two parts and hinged at the top, as and for the purpose described.

2. The combination of said coal-box and the hoisting apparatus above described, when constructed substantially as described and shown.

121,464.—DETACHABLE DRAFT-HOOK.—Jesse Nicholson, Monticello, Ind.

Claim.—1. A detachable hook, when constructed and operating substantially in the manner described.

2. In combination with the frame or plate A, the hook B, arm or frame C, and roller D, when operating substantially as and for the purpose specified.

121,465.—EDGE-PLANE FOR BOOT-AND-SHOE MAKERS.—Aron James Parker, Lynn, Mass.

Claim.—1. The stock C, constructed of a block, *a*, and guard F, in combination with the knife D secured diagonally upon said stock and interlocked with the guard F, substantially as described, for the purpose specified.

2. The outer guard E, constructed and arranged substantially as described for being adjusted and for self-adjustment to the varying thickness of boot or shoe soles, as and for the purpose specified.

121,466.—Circular-Saw Mill.—Lewis C. Pattee, Lebanon, N. H.

Claim.—1. Giving the movement to the log upon the carriage by the movable rail F, operated by the treadle H, the friction-wheel G, the shaft A, and pinion *e*, the shaft *a* and pinions *b d d*, the racks *c c* operating the standards E, and the dogs K, all constructed and operating substantially as described, and for the purpose specified.

2. The combination, with a movable rail, friction-wheel, and setting-blocks, constructed and operating as described, of the vertical roller M for arresting and governing the movement of the log as it is fed to the saw, substantially as described and specified.

121,467. — Medical Compound or Eye-Wash. — Philipp Paul, Black Earth, Wis.

Claim.—The combination of sugar of lead with sugar and the white of an egg, forming a mixture as a medicine for diseased eyes, substantially as above described.

121,468. — Animal-Trap. — Henry Polley San Francisco, Cal., assignor to himself and Isaac Jessup, same place.

Claim.—1. The spring D and the notched bell-crank lever E F, together with the holding-plate, substantially as herein described.

2. The pins *a a*, with the connecting-spring I above the rods, substantially as and for the purpose described.

3. The arms *c' c'* on the rods A A, and the operating lugs *d* for closing and holding the prongs, substantially as described.

4. An animal-trap having the parallel rods A with their prongs C or equivalent devices, together with the opening and closing mechanism for the holding-prongs, as shown, and the setting and springing device, the whole constructed and operating substantially as herein described, and for the purpose set forth.

121,469.—Propulsion of Canal-Boats.—William E. Prall and John D. Defrees, Washington, D. C.

Claim.—1. The movable lug *c* or its equivalent, forming a bearing for the valve on either side, substantially in the manner and for the purpose specified.

2. The combination of the valve *b*, movable lug *c*, and tube *a*, substantially as described.

121,470.—School-Desk and Seat.—James S. Rankin, Minneapolis, Minn.

Claim.—1. The bracket C, formed with the slots *e e* and catch *g*, in combination with the standards A, rack *a*, and bolt *k*, constructed and arranged to operate substantially as and for the purpose described.

2. The bracket E, slots *e e*, bolt *g*, rack *h*, and seat F, in combination with the standard A and bracket C, all constructed and operating substantially as and for the purpose set forth.

3. The bracket C, slots *e e*, and catch *c*, and bolt *k*, in combination with the bracket E, slot *e*, bolt *g*, and rack *h*, operating in connection with the standard A formed with the rack *a* and a^3, for the purpose described.

4. The base piece B, in combination with the standards A A, substantially as and for the purpose specified.

121,471. — Device for Supporting and Connecting School-Desks.—James S. Rankin, Minneapolis, Minn.

Claim.—The central beam B, formed of a series of sections by the combination of the upper lengths *b* and the under lengths *c*, constructed, substantially as described, for supporting and connecting a series of school-desks, as set forth.

121,472.—Water-Wheel.—Benjamin Redding, Kentville, assignor to David M. Dickie, Canning, Canada.

Claim.—A hollow cylinder for admitting the water to the wheel, having a stationary bottom and hinged sides which answer for gates when closed and for guides when open, in combination with the barrel and chains for opening the gates, and a revolving wheel, open in the center, to admit said cylinder, for the purposes hereinbefore set forth.

121,473.—Bed-Bottom.—Reuben A. Smith, East Weare, assignor of one-half his right to Thomas R. V. Bradley, Manchester, N. H.

Claim.—The suspending devices, consisting of the brace D, stirrup E, bar C, and loop G, as applied to the rails of a bedstead, substantially as and for the purpose shown and described.

121,474.—Machine for Making Watch-Cases.—Charles Louis Thiery, Boston, Mass.

Claim.—The herein-described receiver, for purposes above stated.

121,475. — Mode of Applying Tints to Photographs.—Henry Vander Weyde, New York, N. Y.

Claim.—The use of pulverized pumice-stone, emery, or its equivalent, for the purpose substantially as described.

121,476.—Station-Indicator.—Francis F. Warner and James W. Benham, Chicago, Ill.

Claim.—1. The disks A A', provided with inner radial grooves and circular flange for supporting the inner edge of the cards, the ribs between the grooves not extending to the flange, in combination with the plates C, and the guard D arranged with its slot for the cards to pass through beneath the disks, substantially as and for the purposes specified.

2. The riders *e*, the vertically-vibrating bar F supported upon a spring, in combination with operating levers, and arranged beneath the disks so that the cards will simply rest upon them, all substantially as and for the purposes described.

3. The combination of the pawls J J', the sliding bar K, cams *k k'*, when so constructed and arranged that when one pawl serves to turn the card-holder the other pawl serves as a stop, as and for the purposes set forth.

4. The adjustable stop *m*, in combination with the sliding bar K, cams *k k'*, pawls J J', for the purpose of automatically reversing the motion of the machine at any desired point, substantially as described.

121,477.—Sewing-Machine.—John N. Wilkins, Chicago, Ill.

Claim.—1. The presser-foot B arranged to move the fabric laterally to the line of its edge and alternately forward in the line of stitch by the automatic movement of the needle-bar, substantially as and for the purpose described.

2. In combination with the presser-foot B, the plate A, lever C, cam D, and spring E and I, arranged in connection with pivot *h* of the needle-bar, substantially as described.

121,478.—Manufacture of Paints.—Damon R. Averill, New Centreville, N. Y.

Claim.—The method of uniting the bases or bodies of paints with watery solutions, oils, and pigments, the same consisting in first wetting the oxide of zinc, carbonate of lead, or other material to form the body of the paint with either or several of the solutions herein named, and then adding a drying oil or oleaginous compound so as to form a paint, substantially as set forth.

121,479.—Engine Operated by Heated Liquids.—James S. Baldwin, Newark, N. J.

Claim.—The arrangement and combination of the cylinder A, piston B, valve-chest E, and valves controlling the passages *g* and K, substantially as described, and for the purpose of constituting an apparatus for controlling the temperature of liquids, as herein set forth.

121,480.—Engine Operated by Heated Liquids.—James S. Baldwin, Newark, N. J.

Claim.—The arrangement and combination of cylinder A having piston B, cylinder P with wire-gauze K, tubes C and D, and valve-chest Q with valves, as an apparatus for controlling the temperature of liquids, substantially as set forth.

121,481. — Engine Operated by Heated Liquids.—James S. Baldwin, Newark, N. J.

Claim.—The combination of cylindrical vessel C with the jackets D and E, pipe A, and valves B and F, arranged substantially as set forth, as an apparatus for controlling the temperature of liquids.

121,482. — Apparatus for Forcing Liquids by the Expansion and Condensation of Gases.—James S. Baldwin, Newark, N. J.

Claim.—The accumulator, constructed and operated, as described, by means of carbonic-acid or equivalent gas in both the gaseous and liquid state, substantially as set forth.

121,483.—Pipe and Cigar Holder.—Virgil A. Bond, Cotton Gin, Tex.

Claim. — The bowl A, chamber B with orifice shaped for the reception of a cigar, shank C, and sponge E, when the same are so connected, by channel D and openings *a b c*, that the smoke escaping at the lower section of the bowl shall enter the chamber above the upper surface of the sponge so that the latter may arrest the nicotine on its upper surface while its lower surface shall in like manner arrest the saliva, the whole being combined and arranged so as to operate substantially as described.

121,484. — Cultivator.—Daniel W. Bowman, Tippecanoe City, Ohio.

Claim.—In combination with a single shovel-plow, A B C, the secondary beam and shovel F F', when pivoted to the main beam at *f* and adjustably connected therewith at the rear end by means of the link G and perforated or slotted plate or bracket H, substantially in the manner set forth.

121,485.—Safety-Pin.—William H. Brock, Bridgeport, Conn.

Claim.—The safety-pin, constructed and operating as described, consisting of the hooks B B hinged to the plate A, and locked or released by the plate *c* or its equivalent, as specified.

121,486.—Car-Seat Frame.—George Buntin, Boston, Mass.

Claim. — As a new manufacture, the herein-described metallic cap-plate for arm-rests of railway-carriage chairs.

121,487.—Faucet.—Marshall Burnett, Boston, Mass.

Claim. — The combination and arrangement of the chamber B and its hole *h* with the valve C, the stem B, the valve-seat *i*, the elastic diaphragm D, and body A, and induct *a* of the faucet, all being substantially and to operate as described.

121,488.—Tuck-Folding Attachment for Sewing-Machines. — Richard G. Bush, Jamestown, N. Y.

Claim.—The plates B and C when used in combination with the vibrating slotted adjustable plate A, in the manner substantially as described, and for the purposes set forth.

121,489.—Earth-Closet.—Dennis B. Collins, Richmond, Va.

Claim.—The cylindrical service-box D, having a crank attached to one end, and provided with a suitable cord or chain, and stops *e e*, so that it can be operated before rising from the seat, substantially as described.

121,490.—Head for Rectangular Can.—Edward T. Covell, Brooklyn, N. Y.

Claim. — Unbroken seamless corners, formed substantially as herein described, in combination with the within-described hook-shaped flange formed upon the edges of a rectangular plate to receive the edges of the sides of a rectangular can and form a joint therewith, substantially as and for the purpose herein set forth.

121,491.—Construction of Packages of Pins. — Chauncy O. Crosby, Milford, Conn.

Claim.—A package of pins formed by coiling, winding, or folding a strip of material previously stuck in the manner described, and having the lower edge of the strip turned over the points, when the said package is constructed and secured in form substantially in the manner described.

121,492.—Case for Pin-Packages.—Chauncy O. Crosby, Milford, Conn.

Claim.—The herein-described box as a case for the arrangement of pins, substantially as set forth.

121,493.—Machine for Sticking Pins.—Chauncy O. Crosby, New Haven, Conn.

Claim.—1. In combination with the longitudinal or angular grooved feeding device I constructed with transverse grooves, the shoe L constructed with ribs corresponding to the said annular or longitudinal grooves to form the crimps in the paper to receive the pins, substantially as set forth.

2. In combination with the grooved slide D, the cut-off E, and follower F, the longitudinal or annular grooved feeding device, the shoe L constructed with ribs corresponding to the said annular or longitudinal grooves to form the crimps in the paper to receive the pins, substantially as set forth.

3. In combination with the subject-matter of the second clause of claim, the guide P, constructed to turn one edge of the paper, substantially in the manner and for the purpose described.

4. A continuous strip or ribbon of material having longitudinal crimps through which pins are transversely stuck, and having the edge of the strip turned up over the points, substantially in the manner and for the purpose specified.

121,494. — Chuck for Metal Turning-Lathes.—Austin F. Cushman, Hartford, Conn.

Claim.—1. The shell A having the pinion C inserted from the inside and held in place by the sleeve *g* and screw *h*, the said parts being constructed and arranged substantially as described.

2. In combination with the outer shell A and body B, the screw *e* when inserted, as described, for the purpose of holding the parts in place.

3. The combination of the outer shell A, thimble *g*, pinion C, and screws *h* and *e* with the scroll-plate D, jaws E, and body B, constructed substantially as and for the purpose set forth.

4. The combination of the shell A, pinion C, and key or wrench, all constructed and arranged to operate as set forth

121,495. — Eyeleting-Machine. —Adolph Delkescamp, New York, N. Y., assignor of one-half his right to John North, same place.

Claim.—1. The anchor movement or escapement, constructed and operating as described, and attached to the lower end of the semicircular conductor to deliver the eyelets singly and place them properly on the spindle, and die for setting, as herein set forth.

2. The combination of the semicircular grooved conductor D, hopper E, the lever G, link-plate H, and stop I with the vertical plunger C, spindle *a*, die *b*, and escapement F provided with a nipper, *d*, and stop-pin *i*, for automatically setting eyelets.

3. The check-spring *q*, stops *m n*, pin *o*, and vertical stop I, in combination with the plate D, lever G, and standard A, as set forth.

121,496, antedated November 18, 1871.—Butter-Mold. — Anthony J. Derrick, Sheridan, Nev.

Claim.—A butter-mold, composed of the stationary walls C C, movable walls D D, connections F G, pounds-weight marks E E, packer H, and scraper K, all arranged and operating as and for the purposes described and set forth.

121,497. — Vapor-Burner. — Truman P. Doane, New York, N. Y.

Claim.—The wick-tube A provided with orifice C, in combination with the rotary case or cap B provided with orifice F, the tube and case or cap having bearing-points *d* E, constructed and arranged in the manner and for the purpose substantially as described.

121,498.—Knuckle-Protector for Washing Clothes.—George W. Doty, Wooster, Ohio.

Claim.—The knuckle-protector for use in washing clothes, as herein described, with its uneven surface C as applied to the shield, the peculiarly-shaped handle A by which the shield is secured to the fingers, and the attachment of the cushion B which protects the knuckles from contact with the metal, the whole being constructed and arranged to operate in the manner and for the purpose specified.

121,499. — Breech-Loading Fire-Arm.—William H. Elliot, New York, N. Y.

Claim.—1. In combination with a breech-block pivoted at its rear end in a line with the bore of the barrel, whose front end falls or is drawn downward into the receiver in the act of opening the chamber and is forced upward to close the same, the globe-shaped cartridge-rest, whereby a uniform support is provided for the cartridge-head and the opening in the receiver in which the breech-block swings is kept at all times closed, substantially as specified.

2. The auxiliary lever *n*, in combination with the retractor *m* and breech-block *b*, when operating substantially as specified.

3. The combination of the trigger, with its arm *t*, with the double pawl *e* and *e'*, when operating substantially as and for the purpose specified.

4. The combination of the retractor *m* with the hinged guard-strap *v*, whereby it may be brought out of the receiver, substantially as and for the purpose set forth.

5. The arrangement of the swivel-base on the guard-strap opposite to the cut *w'*, as shown and described.

6. The combination of the breech-block *b*, pawl *e* with its stop-shoulder *u* cut at the angle described, and hammer *d* with its point *w'* and catch *s*, all operating for unloading the drum, substantially as set forth.

7. The combination of the locking-shoulder *w* and hammer-rest *w'* with the double pawl *e* and *e'*, whereby the hammer is made to assist in giving the proper movements to the pawl while manipulating the arm, as described.

121,500. — Ice-Pitcher.—Conneillous Englebert and Joseph S. Von Nieda, Philadelphia, Pa.

Claim.—The combination of the vessel A' with the pitcher A by means of a permanent and smooth connection at or near the mouth of the pitcher, there being an ice-chamber, *a*, below and around the vessel A' and the bottom B of the pitcher, having an opening, *b*, and cover C, substantially as and for the purpose above set forth.

121,501. — Broom. — Thomas R. Evans, Blacksburg, Va.

Claim.—The broom-head, consisting of the beveled case A provided with the arms F and one or more bands, D, and with the interior plate C supporting the socket B, substantially as described, for the purpose specified.

121,502.—Toy-Toad.—James Fallows, Philadelphia, Pa.

Claim.—1. The hooked spring-tongue *c'* in the open mouth of the toad C, the said parts being constructed and arranged to operate in combination with the penny *x* and the holder *a''*, substantially as and for the purpose hereinbefore described and set forth.

2. The holder *a''*, when constructed and secured upon the outside of the arched upper side of the case A, substantially as and for the purpose hereinbefore described and set forth.

3. The toad C, the swinging-bar D, and weight *d'*, in combination with the case A, penny-holder *a''*, and den B, the said parts being constructed and arranged to operate substantially as and for the purposes hereinbefore described and set forth.

121,503. — Safe.—Daniel Fitzgerald, New York, N. Y.

Claim.—The combination, with the inner strong box F, the outer shell A, and the filling described, of the interposed compound plate of welded steel and iron, protected within and without by said filling, for the purposes and substantially as set forth.

121,504.—Cast-Metal Desk.—Daniel Fitzgerald, New York, N. Y.

Claim.—The cast-metal desk as a new article of manufacture, substantially as described.

121,505. — Machine for Cleaning and Finishing Silk and Thread.—Christopher L. Frink, Vernon, Conn.

Claim.—1. The thread-polishing roll L, formed with a conical-shaped barrel and a flange at its smaller end, the two meeting in a curved line, substantially as and for the purpose set forth.

2. The stop mechanism for the heads, consisting of the combination, with each set of polishing-heads, of a drop-rod, X, and its stop-wire 11, spring-latch *w* having a notch for each rod, and an arc to disconnect the heads from the mechanism which actuates them, the parts operating as described.

3. The stop mechanism for each set of receiving-spools, consisting of the drop-rod X and its stop-wire 11, actuated by the head K, lever Y, and gear-spindle R, the whole operating substantially as described.

4. In combination with the devices enumerated in the last-preceding claim, the padded brake-lever Z, substantially as and for the purpose described.

5. In combination with the traverse-rod and its actuating cam, the yoke-bar 18 19 having an adjustable piece 23 to vary the leverage and adjust the length of the traverse.

6. In a machine having thread-finishing, stretching, or winding mechanism at opposite sides of the frame, the construction and arrangement of the devices which drive the heads, so that those on one side or on the opposite sides, or both, shall move in opposite directions, substantially as and for the purpose shown and described.

121,506. — Auxiliary Air-Chamber for Stoves. — John H. Goodfellow, Troy, N. Y.

Claim.—1. A portable ash-receiving box, A, provided with a hinged bottom, D, and door *c*, arranged and combined substantially as herein described and set forth.

2. Providing an ash-receiving box such as described with a window, B, for permitting the operator to inspect his work without incurring the liability of ash-dust getting into the room, substantially as herein described and set forth.

3. The shield H, or any equivalent therefor, for containing a horizontal opening or slot, E, at or near the top or upper edge thereof, constructed and applied or used in the manner and for the purpose substantially as herein described and set forth.

4. The employment of the auxiliary air-chamber I, constructed, arranged, and operated in combination with the fire-grate P and fire-chamber or chamber of combustion S, in the manner substantially as hereinbefore described and set forth.

5. The arrangement and combination of the opening or elongated slot E, or any equivalent thereof, with the auxiliary air-chamber I, by means of which atmospheric air is admitted to the fire in the combustion-chamber S so as to promote and facilitate combustion and economy in the use of fuel, substantially as hereinbefore described and set forth.

121,507.—Door-Spring.—William M. Gray, Brooklyn, N. Y.

Claim.—1. The exteriorly prismoid bolt B, in combination with the spring S, and arranged to slip up and down on the same.

2. The bracket K, provided with a socket of prismoid form interiorly, in combination with the corresponding prismoid bolt B and the spring S, the bracket being arranged to be secured to the door and sustain the bolt B.

121,508.—Door-Spring.—William M. Gray, Brooklyn, N. Y.

Claim.—1. The hinged clamp C, arranged to clasp and hold the angled barrel B of a door-spring.

2. The hinged clamp C, secured by the button B', and holding the barrel B.

121,509. — Suspender.—Henry C. Griggs, Waterbury, Conn., assignor to himself and Louis D. Griggs, same place.

Claim.—The herein-described improvement in suspenders, consisting of the two parts A A' and B B', interlaced or folded together, substantially as described.

121,510. — Gluing-Table. — Samuel P. Groocock, Clifton, N. J., and Walter J. Brassington, Brooklyn, N. Y., assignors to The National Wood-Manufacturing Company of New Jersey.

Claim.—1. The combination of the adjustable sliding lock-pins P P, bolts *s s*, tongue *t*, and extension bars A A, substantially as and for the purpose hereinbefore set forth.

2. The combination of the duplex inclined planes H A, radial bars I I, and side rods R R, substantially as and for the purpose hereinbefore set forth.

121,511.—Machine for Manufacturing Horseshoe-Nails.—George L. Hall, Boston, Mass., assignor to Globe Nail Company, same place.

Claim.—1. In combination with rolls for drawing out and shaping horseshoe-nails, and a die and punch for trimming the edges of the nail as formed by the rolls, mechanism to transfer the nail from the rolls to the die and to hold it vertically in proper position in front of said die until the punch in its forward movement shall come in contact with the nail, and then release its hold that the punch may force said nail into the die, substantially as set forth.

2. The combination of the drawing or shaping mechanism, the seizing, carrying, and holding mechanism, and the punching mechanism automatically co-operating to roll the nail-shank and turn its edges, substantially as described.

3. Jointly, the two sets of rolls *f g* and *o n*, each roll being constructed as described, the roll *o* being a plain frictional roll and larger than the roll *n*, as and for the purpose set forth.

4. The combination of the devices shown and described for successively drawing, pointing, surface-finishing, straightening, and edge-trimming a nail-blank.

5. The reciprocating griping-nippers or levers *s x*, stationary die-plate *v'*, and reciprocating punch *t'*, combined and operating substantially as described.

121,512. — Swaging-Tool for Boiler-Tubes. — Ira S. Hamilton, Hamilton, Ohio, assignor to himself and Owens, Lane, Dyer & Co., same place.

Claim.—The improved tool, constructed substantially as described.

121,513, antedated November 25, 1871.—Tool for Expanding and Cutting off Boiler-Tubes.—Ira S. Hamilton, Hamilton, Ohio, assignor to himself and Owens, Lane, Dyer & Co.

Claim.—1. As my improvement in flue-expanders, the construction herein described of the head A with slots therein for the reception of the rollers of equal length with the rollers, and with concave walls that shall at the same time support the rollers and prevent their displacement from the slots, and, jointly therewith, cylindrical rollers without journals.

2. The combination of the tapering mandrel C, sliding cutter G, band F, and cutter F' revolving in stationary bearings, substantially as set forth.

3. The combination and arrangement of the mandrel C C', nut D, and dog or stop E, substantially as and for the purpose set forth.

4. The combination of the sockets A A', rollers B B B', mandrel C C', nut D, and dog or stop E, substantially as and for the purpose set forth.

121,514.—Flue-Expander.—Ira S. Hamilton, Hamilton, Ohio, assignor to himself and Owens, Lane, Dyer & Co., same place.

Claim.—The combination of the tapering mandrel B, swaging-rollers A A', constructed as described, and arranged to form a belt around the mandrel for mutual support, and the sockets C C', substantially as and for the purpose set forth.

121,515.—Ejector for Forcing Liquids.—John T. Hancock, West Roxbury, Mass.

Claim.—1. The combination of the conical steam-jet or tube *a* with the tube *d*, when said tube *d* is continuously enlarged from its orifice in the chamber outward.

2. The combination of the chamber *b* with the tubes *a* and *d* and the tube *c* having upon it the valve *e*.

3. The combination of the tubes *a*, *c*, and *d* with the chamber *b*, all constructed in the manner and for the purposes described.

121,516.—Hemmer and Binder for Sewing-Machines.—Milo Harris, Jamestown, N. Y.

Claim.—The combination, with the double hemming-scroll, of the guide and stop C, when arranged to operate in the manner and for the purpose specified.

121,517.—Spinning-Machine.—George H. Hathorn, Bangor, Me.

Claim.—The arrangement of the wheel L revolv-

ing in a plane at right angles, or nearly so, to the plane of revolution of the spindle, inclined standard C, horizontal pulley E on the top, and vertical pulley D on the side of the same, band M passing over and around said wheel and pulleys, as described, to the pulley K, wire-guide I, screw-button *f*, and retaining-pin *g*, as herein set forth and specified for the purposes described.

121,518.—MACHINE FOR PACKING SUGAR.—Cornelius E. Haynes, Boston, Mass.

Claim.—1. In a device for packing sugar, the combination of one or more revolving sloping blades with an upright shaft, to which the same are applied, sliding vertically in suitable bearings, the whole being as and for the purposes shown and set forth.

2. In combination with the blades E E, shaft B, pulley G or its equivalent, and the traveling carriage D, the carriage being mounted upon the guides P P, and the whole operating as and for the purposes herein stated.

3. In combination with the blades E E, shaft B, and carriage D, or its equivalent, the weights *a' a'*, for the purposes stated.

121,519, antedated November 25, 1871.—DEVICE FOR FASTENING WAGON-SEATS.—Garet G. Heermance, Claverack, N. Y.

Claim.—The combination of the pins *c* and *d* in the seat and the hooks *c'* and *e* upon the seat, and staples or pins upon the wagon or sleigh-body, for the purpose of securing the seat to the wagon or sleigh-body, substantially as described herein and set forth.

121,520. — DEVICE FOR CUTTING WHALEBONE.—Frank E. Hibbard, Boston, Mass.

Claim.—1. In a whalebone cutting-machine two or more knives, G H, in combination with the spring C, as set forth.

2. In a whalebone cutting-machine one or more knives, G H, having a curved cutting-edge, constructed as described, for the purpose set forth.

3. The knife G, in combination with the knife H operated by the screw-shafts I, and the spring-gauge B operated by the screw-shaft C, and the block A, substantially in the manner and for the purpose described.

121,521, antedated November 18, 1871.—LAMP.—Mark Wiggins House, Cleveland, Ohio, assignor to Cleveland Non-Explosive Lamp Company, same place.

Claim.—1. The combination of the interior draught-tube and its longitudinal groove, the wick-sleeve, and the interior turning spiral-threaded tube, the whole constructed to operate substantially as before set forth.

2. The combination of the exterior spiral-threaded tube, operating upon the exterior of the wick-sleeve, with an external stationary tube constructed with an enlarged head, substantially as before set forth.

3. The combination of the interior draught-tube and its longitudinal groove, the wick-tube, the exterior spiral-threaded tube, the wick-sleeve, and the fount, substantially as before set forth.

4. The fount constructed with an expansion-chamber extending above the level of the filling-hole, and also with a vent from said chamber, substantially as before set forth.

5. The combination of the movable spiral-threaded tube with the fount by means of a locking device so as to prevent the upward movement of the threaded tube when it is turned, substantially as before set forth.

121,522.—APPARATUS FOR MOLDING DENTAL-PLATES.—John W. Hyatt, Jr., and Isaiah Smith Hyatt, Albany, N. Y., assignors to Albany Dental-Plate Company.

Claim.—1. The arrangement, with the flask-press A, of the heating-vessel C cast with recesses *c* or equivalent construction to receive and hold the press against turning, substantially as hereinbefore set forth.

2. The recess D and flanges *d* cast with the flask-heating vessel A, and forming a receptacle for the thermometer, as hereinbefore set forth.

121,523.—MEDICAL COMPOUND FOR CURE OF HOG CHOLERA. — Charles L. Jones, Pedler township, Va.

Claim.—The compound for cure of hog cholera, composed of the ingredients and in about the proportions hereinbefore set forth.

121,524.—PAVEMENT.—John Stafford Kelly, New York, N. Y.

Claim.—1. The extension of the iron bands C C, forming flanges and lugs, and the double interlocking by the lugs or tangs D D and socket or groove E, for the purposes herein set forth and described.

2. A pavement formed of wooden blocks and iron bands, with extensions, constructed as aforesaid, and held together by lugs and sockets, as exemplified in drawing and specification.

121,525. — FOOT-POWER. — George Byron Kirkham, New York, N. Y.

Claim.—1. A double pitman, B B', operating alternately against opposite sides of the wheel A, as and for the purpose hereinbefore set forth.

2. The arrangement of the grooved or beveled wheel A and arms B B', also grooved or beveled, the bearings C C', and pitman-arm I, as and for the purpose hereinbefore set forth.

3. The lever E F and wheel D, also the arm G and slide H, as and for the purpose hereinbefore set forth.

4. The arrangement of the bearing J and slide L, spring N, arm K, and standard M, as and for the purpose hereinbefore set forth.

5. The arrangement of the arms B B', bearing C C', and wheel Q, and also the slides O P O P, as and for the purpose hereinbefore set forth.

121,526.—MACHINE FOR SEPARATING AND TREATING ORES.—Stephen R. Krom, New York, N. Y.

Claim.—1. The poppet-valve D, faced with soft material, operating in combination with an ore-bed and constant blowing means, as specified.

2. The arrangement of the valve D along the bottom of the slender space P, communicating directly with the bed so as to work the valve in close contact with the bed, as specified.

3. The hammer F, operating, as represented, to open the valve D by percussive action, as set forth.

4. The spring O, arranged and operated, as represented, relatively to the valve D and to an ore-bed and suitable blowing means.

5. The chamber U between the pipe U' and valve D, in combination with an ore-bed and blowing means, as specified.

6. The oblique back of the delivery-passage J, in combination with the ore-bed I and means for puffing air up through the same, as specified.

7. The overhung front H of the delivery passage J, in combination with the ore-bed I and means for puffing the air, as set forth.

8. In combination with the bed I and means for puffing air through and feeding forward material to be separated therein, the wheel L^2, pawl *l*, and adjustable crank-pin *b*, operating to allow a delicate adjustment of the velocities, as specified.

9. The employment of two or more independent delivering devices, L, and their connections, mounted in a single frame, the one serving to discharge the denser portions of the material, which is unaffected by the other, as specified.

10. The double ore-bed mounted at different levels, the second and lowest receiving the material thrown over from the first in the same manner as the first receives it from the elevated hopper, as and for the purposes specified.

11. The curve or lip, extending forward from the lower edge of the delivering-gate N on the hopper into and under a quantity of the material on the bed, as and for the purposes specified.

12. The backward curve or overhang of the delivery-gate K at the front of the ore-bed, extending into and covering a quantity of the material on the bed, as and for the purposes specified.

13. The dampers *i i* mounted on the single shaft *f'*, and arranged to serve within the hollow bars of the ore-bed, as and for the purposes herein set forth.

121,527. — FEEDER FOR AMMONIACAL-GAS ENGINE. — Emile Lamm, New Orleans, La.

Claim.—The combined tender and injector into one single instrument, in connection with a boiler of liquefied ammoniacal gas, as set forth and specified, or its equivalent.

121,528.—BRIDLE-BLINDER FOR HORSES.—John B. Low, Homerville, Ohio.

Claim. — In combination with a headstall, the blinders B with apertures occupied by sieve-wire, constructed and arranged as herein set forth, for the purpose specified.

121,529.—BAG-HOLDER AND FILLER.—William F. Lum, Waterloo, Wis.

Claim.—1. The scoop B, having a removable head, B', and bail-hand B'', when the same is constructed and arranged to operate as described.

2. The scoop B, with side-staples b^1, and without the head B', in combination with the projecting hooks a^4 and frame-support A, in the manner shown and described.

3. The open scoop B, as seen in Fig. 2, having band b^2 surrounding it, with hooks or ears *d* thereon, in the manner and for the purpose described.

4. The open scoop B, having band b^2 with hooks *d* thereon, in combination with the bag C and spring-holder or fastener C, in the manner shown and described.

121,530, antedated November 24, 1871.—REFRIGERATING-CAR.—Azel Storrs Lyman, New York, N. Y.

Claim.—1. The combination of the fan driven by the wind-wheel on its spindle with the reservoir of cooling material and the descending cold-air flue, in the manner substantially as and for the purposes specified.

2. The combination of the injector or receiving-cowl with the reservoir of cooling material and the descending cold-air flue, substantially as and for the purposes specified.

121,531.—SASH-HOLDER.—William W. Lyman, West Meriden, Conn.

Claim.—The herein-described sash-fastener, consisting of the bolt A, the pull B or its equivalent, and the chambered post D having a headed spindle, over which the said post works, substantially as described.

121,532.—MOTOR FOR SEWING-MACHINES.—James A. Macauley, Wheeling, W. Va., assignor to himself and John Macauley, Sr., same place.

Claim.—The spring B, wheels D, E, G, H, L, K, M and N, in combination with each other, and in combination with brake O and driving-wheel R, constructed and operated as described.

121,533, antedated November 18, 1871.—PNEUMATIC WATER-ELEVATOR. — Philip W. Mackenzie, Blauveltville, N. Y.

Claim.—The combination of the compressed-air chamber A and a supply apparatus, B, with the jet-pipe K H and suction-pipe C, all arranged for operation substantially as specified.

121,534.—MEDICAL COMPOUND FOR CURE OF CANCER.—Nathan McKelfresh, Elizabeth, Ind.

Claim.—The manufacture or preparation and use of a compound for the cure of cancer of the ingredients, in their several proportions, as above described, and for the purpose hereinbefore set forth.

121,535.—SHOVEL-PLOW.—Thomas Meikle, Louisville, Ky.

Claim.—The combination of the beams A and B of a double-shovel plow, tie-bolt E', and brace E, when the latter is constructed at each end with projections or flanges *e e* for embracing the edges of the beams, substantially as and for the purpose set forth.

121,536.—COMPOUND FOR CLEANSING THE HAIR.—Alexander Miles, Toledo, Ohio.

Claim.—The combination of borax, French castile soap, rain-water, and solution of salts of tartar with any appropriate perfume and the glair of an egg, substantially in the proportion named, and for the purpose described.

121,537. — SCISSORS-GRINDING ATTACHMENT FOR SEWING-MACHINES.—Russell S. Morse, East Dixfield, Me.

Claim.—An apparatus for grinding scissors and other blades, arranged with an adjustable slotted bar, *b*, adjustable curved arms *n* and *q* or stationary single arm *i*, gauge piece *s*, bar *d*, standards *e* and *e'*, in combination with a sewing-machine or other frame, *a a a*, and grinding-wheel *g*, substantially as specified.

121,538. — ELEVATED RAILWAY. — John B. Newbrough, New York, N. Y.

Claim.—1. The frame or post I having two parallel rails, *g g'*, lower parallel rails for wheels *i* of suspended cars, and arranged to revolve, as set forth.

2. The car B with its inclined grooved wheels *d d* adapted to the inclined face of an upper rail, and wheels *i* bearing upon or against a lower rail arranged at the side of a series of posts, as specified.

3. A suspended car provided with horizontal driving-wheels arranged below the bottom of the car and bearing laterally on rails secured to the sides of a series of posts, as described.

4. The combination of the posts, the rails or bars connecting said posts, and the supplementary detachable rails, all as specified.

5. The combination of a post, the two rails fitted thereto, and a bolt passing through both rails and the post, and securing all together.

121,539.—CAR FOR ELEVATED RAILWAYS.—John B. Newbrough, New York, N. Y.

Claim.—A car for elevated railways in which the ends of the superstructure consist of girders so constructed as to brace the shallow frame E, from which the lower cages *c c* are suspended, substantially as described.

121,540.—CAR-STARTER.—John North, New York, N. Y., assignor of one-fourth his right to Amos J. Osgood, Cumberland, Me., and of one-fourth his right to George S. Plympton, Jersey City, N. J.

Claim.—1. The levers O O, eccentrics B B, shaft D, connecting-rope or chain F, slotted hook X, in combination with the car-wheel A, for the purposes described.

2. The catch-hook *g*, in combination with eccentric B and pin *i*, for the purposes described.

121,541.—FOLDING PLANT-STAND.—Benjamin B. Nourse, Westborough, Mass.

Claim.—The hinged supporting-frame, composed of two side standards hinged to one edge of a mid-

die one, in combination with the removable shelves of a flower-stand, when constructed in the manner and for the purposes above set forth and described.

121,542.—Process of Constructing Water and Steam Valves.—Samuel J. Peet and Joseph W. Willis, Boston, Mass., assignors to Samuel J. Peet, same place.

Claim.—The process of uniting dissimilar metals, as above set forth, the same consisting in casting one of such metals upon a solid piece of the other having interposed between the surfaces to be so united a flux consisting of the single ingredient, as above stated.

121,543.—School-Desk.—Isaac Newton Peirce, Philadelphia, Pa.

Claim.—The combination, in a school-desk, of the frame A, desk-brace B having the slots *e* and *f*, the chucks C, and springs L, when combined and arranged with the other parts of the desk, as herein shown.

121,544.—Wooden Pavement.—Robert C. Phillips, Cincinnati, Ohio.

Claim.—A wooden pavement composed of blocks of any desired wood, cut from the trunks or branches of trees or saplings, of any desired length, in their natural form, the bark only being removed, placed with their fibers vertical, upon a bed of broken stone and gravel, or sand, or either of them, the spaces between the blocks being filled with gravel or sand, the whole made compact by ramming, rolling, or other proper method, as herein shown and described.

121,545.—Oil-Can.—Gilbert Stewart Prior, Boston, Mass.

Claim.—An oil-can having the tunnel and guard-cones B C, annular spout D, and escape-spout E, substantially as and for the purpose set forth.

121,546.—Nut-Locking Device.—Hadwen L. Purdie, deceased, Buffalo, N. Y., (John Purdie, administrator.)

Claim.—The slot C, provided with notches, as described, in combination with the spring F for locking the dog D, substantially as set forth.

121,547.—Nut-Locking Device.—Hadwen L. Purdie, deceased, Buffalo, N. Y., (John Purdie, administrator.)

Claim.—The combination of the hollow washer with a spring and a pivoted dog swinging through the plate of the washer in an opening, as set forth.

121,548.—Nut-Locking Device.—Hadwen L. Purdie, deceased, Buffalo, N. Y., (John Purdie, administrator.)

Claim.—The above-described pivoted dog or dogs, so arranged that, by the rotation of the nut forward, they are forced into the hollows or recesses until the nut is screwed home, when the dog or dogs fall or swing, by gravity, by the side of the square of the nut, thus preventing the rotation of the nut backward when in a suspended position.

121,549.—Nut-Locking Device.—Hadwen L. Purdie, deceased, Buffalo, N. Y., (John Purdie, administrator.)

Claim.—1. A washer having a dog hinged to the side thereof, in combination with a spring and catch for locking the dog in place by the side of the nut, substantially as set forth.

2. A washer provided with a pivoted dog having the parts D and D′, substantially as and for the purposes set forth.

121,550.—Lamp-Burner.—Fayette S. Robinson, Boston, Mass.

Claim.—1. The adjustable tube A, in combination with a lamp-burner, arranged substantially as described, for the purpose set forth.

2. The combination of the screw D, base B, link N, and movable tube A, substantially as described, and for the purpose set forth.

3. The base-ring K, standards *k k*, and draught-plate E F provided with chimney-fastenings Q Q and P, in combination with the plate H H′ provided with fastenings M and L, substantially as described, and for the purpose set forth.

121,551, antedated November 27, 1871.—Mortising-Machine.—Enoch J. Rowe, Eureka, Cal.

Claim.—1. The combination and arrangement of the bed-pieces A and A¹ and their operating parts, when constructed as shown and described, the two bed-pieces being united by a pivot or bolt, substantially as and for the purpose set forth.

2. The combination of the spring or springs P, lever I, and the tool-stock, substantially as and for the purpose set forth.

3. The combination of the adjustable table E, the head-blocks C C¹, and the yoke E¹, substantially as and for the purpose set forth.

4. The adjustable head-blocks, in combination with the shafts D and D¹, when one of such shafts is provided with a dial-plate, substantially as and for the purpose set forth.

121,552.—Dumping-Wagon.—Lexor B. Snow, Cleveland, Ohio.

Claim.—The combination of the tilting planks C C, lever G, spring-rod J, and catch L, in the manner as described, and for the purpose set forth.

121,553.—Photographic Camera.—John Stock and Jacob Stock, New York, N. Y.

Claim.—1. The arrangement of the ways D in suitable grooves or recesses n made in the sides of the frame C, substantially as and for the purpose hereinbefore set forth.

2. The lever P, lever Q, plates *c* and *d* provided with suitable holes or their equivalent, in combination with the camera-box B and plate-holder slide M, substantially as and for the purpose hereinbefore specified.

3. The combination of the cross-piece G, screw J, and slides F F with the box A of a camera, substantially as and for the purpose hereinbefore set forth.

121,554.—Process of Amalgamating Gold and Silver Ores.—Percival T. G. Stockman, Brooklyn, N. Y.

Claim.—The process of amalgamating the precious ores, as specified, by first forming a paste with water, then expanding by heat, and so introduce the quicksilver in a condition to promote affinity, stirring the whole to hasten amalgamation, the chemicals specified to be used as occasion may require to overcome impurities of ores.

121,555.—Water-Wheel.—Jesse S. Teed, Guilford, N. Y.

Claim.—1. A water-wheel the buckets of which are of greater length than the case, in which it is inclosed, such buckets being constructed substantially as shown and described, as a consequence of which a portion of the water which propels it may be discharged at each end of each bucket and a portion through the center of the wheel, substantially as and for the purpose set forth.

2. The buckets D D, constructed with their central portions and inward edges in the form of a plane or flat surface while their ends and outer edges are curved, substantially as shown, in combination with a diaphragm or spiders for holding them in position, substantially as and for the purpose set forth.

3. The combination of the gates A¹, which are operated by mechanism, and the independently-moving gates or chutes A² with the plates or rims of the case, substantially as and for the purpose set forth.

121,556.—Bridge.—Joseph B. Tracy, Lincoln, Del.

Claim.—The combination of the chords A and B, inverted braces D D′, and bolts E, the parts being constructed and arranged substantially as and for the purposes set forth.

121,557, antedated November 20, 1871.—Lubricator for Car-Journals.—Stephen Ustick, Philadelphia, Pa.

Claim.—1. The combination and arrangement of the pads D′ D′ with the bearing B and journal E, the said pads being held in position by means of bars or supports C, substantially in the manner and for the purpose above set forth.

2. The combination and arrangement of the absorbent strips D with the pads D′, and bars or supports C, the said absorbent strips being arranged and operating in relation to the journal E and oil-reservoir, substantially in the manner described, and for the purpose specified.

121,558.—Culinary Steamer.—Charles E. Wahlgren, Galesburg, Ill.

Claim.—1. The cylinders A and D, constructed as described, and arranged to operate with the vessel J, substantially as described, and for the purpose specified.

2. The catches E E, springs G G, hooked rods I I, and handle *d*, when combined and arranged to operate with the cylinders A and D, substantially as described, and for the purpose specified.

121,559.—Butter-Worker.—Edward L. Walker, Twin Grove, Wis.

Claim.—The combination of the frame B, vertical rollers *e e*, hinged cap D, cross-bar F, and nock E, substantially as specified.

121,560.—Churn.—John Stockton Ward, Plattsburg, Mo.

Claim.—The dasher suspended in the barrel, as shown, and constructed of the vertical shaft A provided with the arms B, to which are secured in a vertical position the air-tubes C having their lower extremities reduced in diameter and curved backward, substantially as shown and described.

121,561.—Telegraph-Signal.—William Henry Ward, Auburn, N. Y.

Claim.—1. The herein-described system of signaling by means of two flags, lights, or their equivalents, one of which is stationary while the other is a working one, the signals being indicated by the relative movement of the latter toward the former, as set forth.

2. In the above-described system of signaling, lanterns so constructed each with its separate slides and operating halyards, that, when permanently arranged above each other in a vertical line, either and all of them may be changed from one spot and by the same operator to stationary or working lanterns, as and for the purpose described.

3. In signal-lanterns, the chamber D at the bottom and chamber *g* at the dome, substantially as and for the purpose described.

4. In combination with the chamber *g*, the curved flange *s*, acting as a draught-deflector, substantially as described.

121,562.—Method of Riveting Latch Knitting-Needles.—Charles P. S. Wardwell, Lake Village, N. H.

Claim.—The herein-described improved method or process of securing the latch in latch knitting-needles, namely, spreading the slot of the needle, inserting the latch and rivet in place, and then closing the sides of the slot toward the latch in the act of riveting or heading down the rivet, substantially as and for the purpose herein specified.

121,563, antedated November 18, 1871.—Jump-Seat.—Nelson Warren and Thomas Underwood, Wilmington, Del.

Claim.—1. The parallel swinging arms E, with fingers F, in combination with the bearing-plate or ear *b* of the plate C, as and for the purposes hereinbefore set forth.

2. The bearing-plate C, forming pivot bearings for the arms E and a rest for the fingers F of said arms, when constructed substantially as herein shown and described.

3. The automatically-operating spring-bar I, constructed and operating substantially in the manner and for the purposes set forth.

4. The swinging block J, constructed as shown and described, and pivoted to plate G, in combination with the supporting-pins *k k*, either as an auxiliary or independent means of supporting the seat, as hereinbefore set forth.

121,564.—Bleaching Wool.—Jules Watteau, Antwerp, Belgium.

Claim.—The method herein described of bleaching wool by the application of a suitable bleaching-gas to it by means of atmospheric pressure obtained by an exhausting or condensing fan or centrifugal machine, substantially in the manner described.

121,565.—Machine for Pulling Wool from Skins.—Jules Watteau, Antwerp, Belgium.

Claim.—1. The revolving elastic plates *l*, in combination with the bar C, substantially as described, to pull the wool from a pelt down between them.

2. The bar C′ or C″, substantially as described, for the purpose described.

121,566, antedated November 16, 1871.—Cooking-Stove.—Jeremiah A. Weakley, Indianapolis, Ind.

Claim.—A removable solid fender, E, combined with the opening C in the front plate B of a cook-stove, substantially as herein set forth.

121,567, antedated November 25, 1871.—Plow.—William Yost, Goshen, Ohio.

Claim.—The plow described, consisting of the bar A, carving standards *a a′*, shares B B′, share-bars C C′, and handles D D′, the parts being relatively arranged, as described.

121,568.—Whip-Socket.—Frank Adams, Middlebury, Ohio.

Claim.—1. The combination of the spring-jaws with the cylinder A, substantially in the manner and for the purpose specified.

2. The arrangement of the jaws with relation to the supplementary cylinder B, as shown and described, whereby the whip may be supported and held without being locked, as set forth.

3. The arrangement of the cross-bar transversely of the cylinder A, between the spring-shanks of the jaws and above the key-hole, as and for the purpose hereinbefore specified.

4. The combination of the main cylinder A, the supplementary cylinder B, the spring-jaws C C, and bar D, as set forth.

121,569.—Process and Apparatus for Drying and Preserving Animal and Vegetable Substances.—Charles Alden, Newburg, N. Y.

Claim.—1. The within-described process of maturing and preserving animal and vegetable substances, in part through evaporation and in part through chemical binding of their organic moisture, by exposing the same to a blast of heated and humid air, increasing in humidity and decreasing in heat as the evaporation proceeds, or screens moving in a tunnel or tower, said current of air moving in the same direction with the screens containing the articles to be treated, substantially as herein set forth.

2. The arrangement of a fan-blower, H, air-chamber G, heating-coil F, and tunnel A containing a series of rising-and-falling screens, E, substantially as shown and described.

121,570.—MODE OF ATTACHING SPRINGS TO VEHICLES.—Truman H. Allen, Corry, Pa.

Claim.—The combination of the springs C, springs I, studs G, cross-rail F, cross-bar *e*, and braces A', pivoted to said cross-bar *e*, as described, substantially in the manner as set forth, and for the purpose specified.

121,571, antedated November 20, 1871.—WAGON AND SLEIGH BOX.—Anson R. Ambrose, Chicago, Ill.

Claim.—1. The cleats E E, hinged to the end board D, substantially as described, and for the purposes set forth.

2. The bevels *a b* on the top of end board D and bottom of top-box board C, substantially in the manner described, and for the purposes set forth.

3. The pin *d*, attached to the end board D and fitting in the mortise *c*, substantially in the manner shown and described, and for the purposes set forth.

4. The cleats K K, with shoulders L L, on the side boards B B, made in one or more pieces, substantially as shown, and for the purpose set forth.

5. The blocks O O, fastened at the lower ends of the cleats K K, substantially as and for the purposes herein set forth.

121,572.—RAILWAY-CAR AXLE-BOX.—William S. Auchincloss, Wilmington, Del.

Claim.—The arrangement on an axle-box of a strap or straps, C, embracing the body of the box and the lug which forms the bearing for the pivot of the equalizing-beam, substantially as set forth.

121,573.—BAKER'S OVEN.—George E. Bailey, Mansfield, Mass.

Claim.—1. The combination of the oven B and fire-pot E, when the fire-pot is below the oven, with an air-space between them, and is connected to the oven by flues or pipes N, substantially as described, for the purpose specified.

2. The combination of the fire-pot E, oven B, and chamber F about fire-pot E, said chamber F being in communication with the fire-pot and having an inclined floor G, substantially as and for the purpose described.

121,574, antedated November 25, 1871.—AXLE FOR VEHICLES.—Ephraim Ball, Jr., Canton, Ohio.

Claim.—The combination of a T or angular-shaped axle, A, and the bisected bearings B B having their under sides shaped to fit said axle, and connected together and to the axle by bolts or rivets *s s*, substantially as herein set forth.

121,575.—LUBRICATOR FOR CAR-AXLES.—Joseph Barber, Bridesburg, Pa., assignor to himself and Richard B. Duncan, same place.

Claim.—The plate F, carrying the spirally-grooved roller C mounted in spring-bearings, and arranged in connection with and attached to the under side of the axle-box, as shown and described, for the purpose specified.

121,576.—SCRAPER.—George W. Bayly, Stuyvesant, N. Y.

Claim.—1. The self-adjusting platform N O, in combination with the scraper A B, wheels and axle L J, and adjustable connecting-bar I, substantially as herein shown and described, and for the purpose set forth.

2. The adjustable U-shaped connecting-bar I, in combination with the scraper A B and wheels and axle L J, substantially as herein shown and described, and for the purpose set forth.

3. The cutter R S, in combination with the scraper A B, substantially as herein shown and described, and for the purpose set forth.

121,577.—APPARATUS FOR PRESERVING AND FORCING BEER WITH COLD AIR.—Franz Blueher, Mascoutah, Ill.

Claim.—1. The crank *k*, arbor *j*, segment *i*, and double-rack *h*, combined with a piston-rod *e*, as and for the purpose specified.

2. The cylinder *a*, piston-rod *e*, and pipes *f g* of an air-pump combined with valve-chambers *b b* and valves *c d*, arranged as described, for the purpose specified.

3. The cone-shaped enlargement *l* with perforated bottom, and filled with charcoal, when applied to pipe *f*, as and for the purpose specified.

4. The combination of mechanism *h i j k*, an ice-box A, and the particular air-pump *a b c d e f g* arranged in said ice-box, as and for the purpose specified.

121,578.—BROOM-HEAD.—Cornelius Blom, Jr., and John Aling, Holland, Mich.

Claim.—A broom-head formed of the clamp B, straps C C, and casing-plates D D, arranged substantially as described.

121,579.—TAP FOR OIL-CANS.—Jabez A. Bostwick, New York, N. Y.

Claim.—The combination of a cap-plate, A, with a bottom plate, D, so that a lip on the latter shall project through an aperture in the former and the two form a valve-chamber and tap for oil-cans and other vessels, substantially as herein described.

121,580.—FOUNTAIN.—Henry Broezel, Manston, Wis.

Claim.—The flexible water-reservoir F, plunger E provided with the toothed bar *f*, the pinions *b b*, and racks *d d* arranged within the pillar D carrying the top C having pipe G, as and for the purpose specified.

121,581.—APPARATUS FOR TESTING CANS, BARRELS, &c.—William D. Brooks, Baltimore, Md., assignor to Mary C. Brooks, same place.

Claim.—1. The combination of the hinged and spring-supported arm *d*, treadle *k m*, pump *a*, flexible tube *b*, and pipe *c*, as shown and described, and for the purpose specified.

2. The combination of the pump *a*, hinged arm *d*, gauge *j*, flexible tubes *b* and *i*, pipe *c*, ball *g*, and treadle *k m*, as shown and described.

121,582.—PLOW.—John Butler, Huff township, Ind.

Claim.—The combination of the standard *d*, the plate G, the reversible plate C, the plows F F' and H, and the beam A, constructed substantially as described, for the purposes set forth.

121,583, antedated November 20, 1871.—LAMP-BRACKET OR SUPPORT.—Henry Campbell, San Francisco, Cal.

Claim.—A lamp-support, consisting of clamp composed of the top plate *a*, edge plate *b*, under plate *d*, and hinged claw-bar *c*, and of the socketed standard *m*, standard *g*, and the disk *i* having the curved arms *j*, all constructed and arranged substantially as and for the purpose set forth.

121,584.—TICKET-HOLDER.—William James Campbell, St. Louis, Mo.

Claim.—A ticket-holder having partition D with stop *d*, cover B with stop M, and shaft C with springs L L, combined to operate upon a holding plate K, as and for the purpose specified.

121,585.—FLOUR-BOLT VIBRATOR.—Charles Edwin Canan, Coldwater, Mich.

Claim.—The arrangement of the springs D and stirrups E on a bolting-reel, with relation to the lever C, provided with the offset *c* and strap C', adjustably hinged to the bolting-chest, as and for the purpose set forth.

121,586.—PURIFYING ACETIC ACID.—John F. Cavarly, Flushing, N. Y.

Claim.—The treatment of acetic acid with any of the compounds known in chemistry as the alcohols, as above stated, substantially as and for the purpose above described.

121,587.—VALVE-INDICATOR.—John C. Chapman, Waltham, Mass.

Claim.—The rack B, in combination with the worm-gear D and valve-shaft A, substantially as and for the purpose set forth.

121,588.—GRAIN-DRIER.—Charles F. Chichester, Brooklyn, N. Y.

Claim.—1. The furnace for a grain-drier, made with the double-side walls *c c*, arch *f*, and opening *g*, for mixing atmospheric air with the products of combustion and passing the same directly into the drying apparatus, as set forth.

2. The arrangement of the flues *h h*, bin *l*, ranges of tables *i o*, and pipes *r s* leading to the chimneys *t u*, as and for the purpose set forth.

3. The sheet-metal tables for a grain-drier, made as an inverted trough, with ribs in the sheet metal near the edges, for the purposes and as set forth.

121,589.—WRINGING-MACHINE.—James M. Clark, Lancaster, assignor to Franklin L. Clark, Clarksville, Pa.

Claim.—The wringing-machine herein described, consisting of the frame A *a a'*, rollers D E, pulleys F, elastic bands G, bar B, connecting-heads H, and adjusting-screws I, all constructed and combined to operate substantially as and for the purpose set forth.

121,590.—ROCK-DRILLING MACHINE.—Thomas H. Coate and Lewis A. John, Pleasant Hill, Ohio.

Claim.—1. In a drilling-machine, the dogs H and spring I, in combination with the sliding blocks G g^3, pulley g^1, rope *b'*, pitman or crank-arm f^2, and studs J, substantially as described.

2. In a drilling-machine, the combination and arrangement of the pulleys *b b*, rope *b'*, windlass D, pulley g^1, sliding blocks G g^2, dogs H, and studs J, as and for the purpose specified.

121,591.—COTTON AND HAY PRESS.—Edwin S. Collins, Trenton, Tenn.

Claim.—1. In a press for cotton, hay, or other material, the combination of the bar E, interchangeable pendent fulcrums K L M N *e*, lever G, and follower *g*, as and for the purpose specified.

2. The bracket *e*, having the inclined tail-board F, in combination with the lever G, adapted to work on the interchangeable fulcrums K L M N, as described.

3. The hinged arm g^1, applied to the press-lever G, in combination with the bracket *e* and bar g^2, as and for the purpose specified.

4. The rack H, pinion h^1, and crank h^2, in combination with the press-lever G, adapted to work on interchangeable fulcrums, as and for the purpose specified.

121,592.—CHERRY-STONER.—Abner M. Comstock, Galesburg, Ill., assignor to Agnes A. Comstock, same place.

Claim.—1. The shaft B with cranks B'' and B''', the pitman E, and lug *e*, the cylinder G, constructed as described, and the lugs I I I I I I, when arranged to operate substantially as described, and for the purpose set forth.

2. The cylinder K, when combined and arranged to operate with the cylinder G, shaft B, crank B''', cam *n*, lug *f*, and spring M, substantially as described, and for the purpose specified.

3. The cylinder K, cylinder G, and forks D, when arranged to operate substantially as described, and for the purpose specified.

4. The combination of the frame A A, grooved plate P, apron R, cylinders K and G, head C, forks D, plate J, pitman E F, shaft B, cranks B'' B''', and spring M, when arranged to operate substantially as described, and for the purpose specified.

121,593.—THILL-COUPLING.—Henry S. Cox, Franklin, Mich.

Claim.—The combination of the elongated hook C with the elongated or flattened pin B of a clip, A, provided with a recess, *b*, when the several parts are constructed and arranged to operate substantially as and for the purposes herein set forth.

121,594.—LADY'S HAIR-NET.—Joseph Dalton, New York, N. Y.

Claim.—A head or hair-net composed of a main set of meshes fabricated of coarse thread combined with an auxiliary set or sets of meshes fabricated of fine thread, substantially as described.

121,595.—MANUFACTURE OF BLEACHING-POWDERS, SULPHATES, &c.—Henry Deacon, Appleton House, Widnes, England.

Claim.—The employment, in the manufacture of bleaching powder and of sulphate of soda and of sulphate of potash, of inclined shelves, with spaces left above or between the said shelves, through which spaces the chemical gases pass and act on the solid materials during their passage over and along such inclined shelves, as hereinbefore described, and illustrated by the drawing.

121,596, antedated November 24, 1871.—EXTENSIBLE FURNITURE.—Joseph Mason Dennis, Galesburg, Ill.

Claim.—1. The combination of the levers *a* and the boards or sheets *b*, as and for the purpose specified.

2. The combination, with the levers *a* and the boards or sheets *b*, of the frames *c*, substantially as and for the purpose specified.

121,597.—BEE-HIVE.—Aaron F. Dickey, Benford's Store, Pa.

Claim.—The comb-sashes E, suspended by their upper arms upon seats *a b* formed within the upper front extension of the frame, and their vertical bars supported by the notched seats M M' on the inner sides of the frame, so as to allow them each to be held in position without fastenings and be removed when desired, as shown and described.

121,598.—WASHING-MACHINE.—Oscar L. Dorr, South Walpole, Mass.

Claim.—The combination, with frame A *a*, rolls C, and alternately-rotating rods *d*, of the axle *f*, having its bearings arranged in blocks provided with springs *h h*, as and for the purpose set forth.

121,599.—DENTAL FORCEPS.—Nephthali A. Durham, Duquoin, Ill.

Claim.—The beak B, constructed with a rectangular curved shank, *b*, in combination with the jaw A, constructed with a rectangular curved socket, *a*, adapted to receive the shank *b*, substantially as set forth.

121,600.—SUSPENDER.—Robert Henry Eddy, Boston, Mass., assignor to A. G. Eddy, same place.

Claim.—1. A suspender as composed not only of a single shoulder-strap and a button-strap connected by a slide or buckle, as set forth, but also of a branch button-strap connected with or applied to the shoulder-strap above its connection with the first button-strap.

2. The improved suspender, made substantially as described, viz., as composed of the long shoulder-strap A, the single adjustable button-strap C, the slide or buckle G, and the branch-strap leading from such slide G, and composed of a single

strap, D, or two straps, D E, connected by a buckle, all being arranged essentially as explained.

121,601. — MACHINERY FOR PERFORATING PAPER FOR TELEGRAPHIC PURPOSES.—Thomas A. Edison, Newark, N. J., assignor to himself and George Harrington, Washington, D. C.

Claim.—1. Two ranges of punches for perforating telegraphic paper with holes representing dashes, or dashes and dots, substantially as set forth.

2. A strip of telegraphic paper perforated in two lines, with the perforations arranged so that the long pulsation in transmitting is obtained from perforations in both lines, substantially as set forth.

3. A series of perforating-punches, arranged in two or more lines and supported in heads that are perforated in the line of the opening in the die, substantially as set forth.

4. The die-plate *n*, hinged so as to be opened, in combination with the punches, for the purposes set forth.

5. The springs *o* combined with the punches *i*, and arranged in the manner specified to retract the punches from the die-plate *n*, as set forth.

6. The combination of the sliding punches and sliding plates *k* with the actuating-levers *e*, substantially as set forth.

7. The punches *i* reduced at the end next the slide-plates *k*, for the purposes set forth.

8. The finger-keys *a a'*, in combination with the bars *c*, slide-plates *k*, and levers *e*, substantially as and for the purposes set forth.

9. Mechanism actuated by one movement of a key, substantially as specified, for punching in two rows telegraphic characters consisting of dots and dashes.

10. The finger-keys, cam-rods, levers, and cams arranged between the frames *d'*, in combination with the punching and feeding mechanism operating upon the strip of paper running parallel or so with the finger-keys, as set forth.

11. The paper-feeding mechanism having a reciprocating movement of varying length, according to the character perforated, and acting to grasp the paper and carry the same forward, but not to catch or hold such paper on the return movement, substantially as set forth.

12. The paper-feeding clamp *t* moving upon the slide *s*, in combination with the pawl *u* and mechanism for reciprocating such clamp, substantially as set forth.

13. The rack-bar *v* with inclined teeth, in combination with the pawl *u* and finger 9, substantially as and for the purposes set forth.

14. The holding-pawl 10 operated by the rack-bar *v*, substantially as set forth.

15. The clamp *t*, pawl *u*, and fence *s*, in combination with the rack-bar *v* and pawl 10, substantially as set forth.

16. A reciprocating paper-feed in which the clamping device is lifted off the strip of paper on the backward movement and pressed upon the same on the forward movement, substantially as set forth.

17. The combination of a reciprocating paper-feed with finger-keys that operate the punches, and with mechanism connecting the said finger-keys to the paper-feed in such a manner that the movement given to the paper will be the amount required for the letter or character perforated, substantially as set forth.

18. The slide-rods *e*, pins 15, and cam-fork *s'*, in combination with the rock-shaft *v'* and reciprocating paper-feed, substantially as set forth, for varying the feed according to the position of the pins 15 or their equivalents.

19. In a instrument for punching paper for telegraphic purposes, a series of cams each adapted to operating the mechanism that moves the punches and then releasing such punches during the downward movement of the key, substantially as set forth, so that said punches may be out of the paper before the feed takes place.

20. The paper-reel, in combination with the surrounding stationary pins contiguous to the base of the reel, for the purposes set forth.

121,602.—MACHINE FOR PRINTING MAIL-TAGS.—George H. Fayman, Washington, D. C., assignor to De Vere Burr, same place.

Claim.—1. The combination of a series of independent printing-rollers, C, arranged in a circle and having a movement together to present any one of their series for work, with a pressure-roller, E, and a feeding-table, F, essentially as described.

2. In combination with a printing-wheel, the operating rollers whereof having both an independent and a united movement, the self-adjusting inking-rollers G H, arranged upon the fixed shaft B within the circle of motion of said printing-rollers, essentially as described.

3. The system of printing-rollers C, arranged upon a fixed central shaft, B, in combination with an index-disk K, arranged outside of said rollers and having a movement therewith upon said shaft, as described.

4. The printing-rollers provided with separate and distinct printing-bands, arranged between annular inflexible supporting-surfaces *c*, for the purpose of printing tags separately, in continuous strips, or in sheets of separate printed rows, as described.

5. The spring guide-strips *d* of the feeding-table F, to accommodate tags of different widths, as described.

6. The socketed journal N of the printing-roller C, in connection with the opening *k* in the frame and the removable square-shanked crank-handle P, for the purpose described.

7. The hinged brush Q, in combination with an independent-moving printing-wheel having a series of independent printing-rollers, C, as and for the purpose described.

121,603.—FIFTH-WHEEL.—Amaziah Finley, Bainbridge, Ind.

Claim.—The connection of the reach to the front gear by the pin K, plate L, and center-piece M, all arranged substantially as specified.

121,604. — CHURN. — Miles Fisk, Adrian, Mich.

Claim.—The radial ribs or flanges C, plates D, inclined wedge-shaped blocks E, teeth F, and long teeth or braces *f'*, constructed and arranged in connection with each other and with the cylindrical case or body A, substantially as herein shown and described, and for the purpose set forth.

121,605. — RAILWAY. — Daniel Fitzgerald, New York, N. Y.

Claim.—1. The combination, with the wheels of the continuous line of car-trucks, of the rapid-moving or transit cars propelled by frictional contact with the peripheries of said wheels, substantially as described.

2. The construction and arrangement of the main line of cars as connected with the continuous line of trucks, as described, in combination with the transit cars propelled by the peripheries of the wheels of such trucks, as aforesaid, whereby the same trucks are employed for separate lines of cars traveling at different rates of speed, substantially as described and represented.

3. In combination with the rapid or transit cars propelled as aforesaid, the traveling platforms or platform-cars forming part of the continuous line of trucks, to enable passengers to reach the cars of either line while the main line is under way, as herein described.

4. Propelling the main line of cars or trucks by means of driving-wheels E, arranged and operating substantially as set forth.

121,606.—METALLIC CARTRIDGE.—Sullivan Forehand and Henry C. Wadsworth, Worcester, Mass.

Claim.—A cartridge-shell composed of the metal head A and paper charge-tube B when said parts

are constructed and united together to form a smooth and continuous exterior, in the manner herein shown and set forth.

121,607. — BUNG.—Vincent Fountain, Jr., West New Brighton, N. Y.

Claim.—1. The bush A, provided with pins or points *a*, in combination with the bung B of a barrel, cask, or keg, likewise provided with pins or points for the cancellation of revenue stamps, in the manner and for the purpose described.

2. The cancelling pins or points *a* of the bush and bung attached to barrels, casks, &c., inclosed by a rim, C, whereby the removal of the stamp is prevented, as herein described.

3. The bush A, provided with the rim C and pins or points *a*, in combination with the bung B, likewise provided with pins or points, and with a double tapering hole for the insertion of a cork on the inside and a faucet on the outside, the whole arranged and operating to cancel and mutilate the revenue stamp placed thereon to prevent its double use, as herein described and shown.

121,608.—ANIMAL-TRAP.—Dudley M. Francisco, Three Rivers, Mich.

Claim.—The flaring-pan A, provided with tilting bottom B and weight or ball *h*, all constructed substantially as described, and for the purposes set forth.

121,609.—TREMOLO FOR REED ORGANS.—Levi K. Fuller, Brattleborough, Vt., assignor to J. Estey & Co., same place.

Claim.—The combination of the stop-lever J, connecting-rod *h*, and slide E with the spur *b*, or its equivalent, for controlling the motion of the fan-shaft D in parlor organs, substantially as set forth.

121,610. — TREMOLO FOR REED ORGANS.—Levi K. Fuller, Brattleborough, Vt., assignor to J. Estey & Co., same place.

Claim.—The spur G on the fan-shaft D, acting in combination with the stop or projection F for controlling the tremolo attachment of parlor organs, substantially as set forth.

121,611.—LUBRICATOR. — William T. Garratt, San Francisco, Cal.

Claim.—An oiler for steam-engines, provided with a steam-heating coil having a pipe connection with the boiler or other steam-supply and a regulating-cock at the discharge, all substantially as specified.

121,612.—GRAIN-CAR. — Alphonso E. Gordon, New Brunswick, N. J.

Claim.—1. The improved car, herein described, for transporting grain, constructed with a flat roof and convex bottom and sides, and provided with receiving and discharge orifices closed by suitable valves, as described.

2. In combination with a car, A, having a convex bottom, the valves C and E arranged to slide in opposite directions, substantially as specified.

121,613.—CULTIVATOR. — Marquis L. Gorham, Rockford, Ill.

Claim.—1. The combination of the beams C and cross-brace D with the plate *a* and hammer-strap *b*, constructed in the manner and for the purposes as shown and described.

2. The combination of the slotted adjusting-plate *e* and stud P having a recess to receive the plow-standard with the standard O, constructed as shown and described.

3. The combination of the angular beams T bearing upon axle B with the adjusting screw-bolt *f* and beam C, constructed and arranged in the manner and for the purpose shown.

4. The hangers E with sockets *e* connected to vertical sockets F by stud *d*, arms I, and links *c*, in combination with the lifting-levers J and L and fulcrum-bracket K, all arranged to operate in the manner described.

5. The sway-bar S and rollers *v*, in combination with the slotted adjustable plates R and beams or drag-bars H, constructed and arranged in the manner as described.

6. The lever L having lip *i* and button *k* thereon, in combination with lever J and fulcrum-bracket K, as described.

7. The shields W pivoted to the forward end of beams H, and suspended and adjusted by cords *x* passing through the beams T, and by which cords the shields are raised at the will of the operator and independently of the beams H and of each other, as described.

121,614.—SIGN FOR STREET-LAMPS.—William Graham, William Snyder, and Patrick O'Brien, Pittsburg, Pa.

Claim.—The hinged perforated frame A with its glass backing B, central clasp *c*, and radial arms *n n*, in combination with a lamp-post, T, and its lamp R, in the manner shown, for the purposes hereinbefore set forth.

121,615.—PAPER-FOLDING MACHINE.—Richard R. Gubbins, West Troy, assignor to himself, Thomas W. Holmes, same place, and Achille J. Rousseau and Louis H. De Zouche, Troy, N. Y.

Claim.—1. The combination, with the folding knife and rollers K, of a rotating feeder, whether in cylindrical or other form, and adapted for receiving the papers from one or more tables, all substantially as specified.

2. The folding-knife G, arranged within the cylinder, and the latter provided with the opening in the shell for allowing the knife to act upon the paper through said opening, all substantially as specified.

3. The arrangement of the folding-knife G on a sliding plate at the end of the cylinder, and in combination with an actuating cam thereon, as and for the purpose specified.

121,616.—BURIAL-CASE.—Joseph Hackett, Louisville, Ky.

Claim.—The casting C riveted to the sheet-metal side A of a burial-casket, and the piece H resting in recess G thereof and soldered to said side, as specified.

121,617.—CAR-COUPLING. — Albert S. Hallett and Hervey H. Hallett, East Abington, Mass.

Claim.—The coupler E, the self-operating gate or catch C, and the turn-button D, constructed, arranged, and combined with the chambered draw-bar or bars A B, all substantially in manner and so as to operate as described.

121,618.—BEE-HIVE.—Jasper N. Hieronymus, Fairbury, Ill.

Claim.—The center column B, provided with the lateral openings D, and arranged between the frames E E of the hive A, substantially as set forth, for the purpose specified.

121,619.—SELF-OPERATING GATE.—Albert N. Holmes, Tyrone, Mich.

Claim.—The combination, with the latch F, of the weighted latches P and guard N, substantially as specified.

121,620. — ELECTRIC INDICATOR FOR ELEVATORS.—Edwin Holmes, Brooklyn, N. Y.

Claim.—1. The combination of an elevator, which contains an indicator, C, with a series of flexible or movable metallic conductors, which connect the wires $a\ a^1\ a^2\ a^3$, &c., on the elevator with the wires $b\ b^1\ b^2\ b^3$, &c., in the building.

2. The combination of a movable elevator with an

indicator moved by electrical impulse from stationary floors of a building.

121,621. — ROTARY HARROW. — Cornelius Hood, Seneca Falls, N. Y.

Claim.—The arrangement and combination of the wheel-track C, draft-beam D, bale E, weight I, extra weight J, arm D, and balance-bar P provided with a track, A, all operating together, as and for the purpose described.

121,622.—ELECTRO-MAGNETIC SEWING-MACHINE.—George M. Hopkins, Albion, assignor to himself and George H. Shattuck, New York, N. Y., assignors to Henry G. Thompson, Milford, Conn.

Claim.—1. The combination of the helices D D with the needle-bar B of a sewing-machine, substantially as shown and described.

2. The combination of the helices D D with the rod E, or its equivalent, and the shuttle-carrier or looper of a sewing-machine, substantially as and for the purpose hereinbefore set forth.

3. The gearing F, in combination with the above devices, as shown and described.

121,623.—WAGON-BODY AND RACK.—Isaac N. Hoyt, Wayland, Mich.

Claim.—1. The combination of the cross-ties B provided with lugs A and the movable straps a, all constructed substantially as described and shown, for the purpose of fastening a rack to a wagon-box, as set forth.

2. The combination of the cross-ties B, provided with openings D and the pockets b, all constructed substantially as described and shown, for the purpose of securing the wings C of a hay-rack to a wagon-box in either a vertical or an inclined plane, as set forth.

121,624. — TILE FOR ROOFING. — John B. Hughes, Terre Haute, Ind.

Claim.—The plate A, formed with the upturned edges D D, raised part B, of the form shown, hollowed out at d, in combination with cap E constructed with parallel sides, all arranged to form a roofing-tile, as described.

121,625.—PARASOL.—James Louis Jacquin, New York, N. Y.

Claim.—1. The wire-spring tips, in combination with the cover and the frame ribs of a parasol or umbrella, as described.

2. The wire coils i, arranged to have a movement on the ribs for interlocking with rings or loops at the seams of the cover as a means for holding the ribs at proper distances apart and beneath the seams whether the fixed lining is used or not, as described.

121,626.—PNEUMATIC MOTOR.—Thomas B. Jeffery, Chicago, Ill., assignor to Horace Wickham, Jr., same place.

Claim.—A cylinder and plunger or piston, the latter operated so that a vacuum produced beneath it by its elevation shall afford a continuous motive-power when combined with a system of gearing, substantially as specified.

121,627.—ORNAMENTING PENCIL-CASES.—Ephraim S. Johnson, Jersey City, N. J.

Claim.—As an article of manufacture, a pencil or pen-case made of a metal tube with flat surfaces, receiving slabs of mother-of-pearl attached and finished, as set forth.

121,628, antedated November 30, 1871.—MACHINE FOR ENAMELING MOLDINGS.—John Johnson, Boston, Mass., assignor to himself and Thomas Moore, same place.

Claim.—1. The adjustable guide-way E, rabbet-scraper R, and back-edge scraper S, substantially in the manner as hereinbefore set forth.

2. The combination of the sectional elastic adjustable pressure-rolls H H′ with the adjustable guide-way E and scrapers R and S, when combined and arranged so as to operate substantially in the manner as hereinbefore set forth.

3. The combination of the adjustable feed-rolls s s′ and pulleys u u′ with the adjustable guide-way E and scrapers R and S, when combined and arranged substantially in the manner as and for the purposes set forth.

4. The combination of the stationary reservoir L, surrounded with a steam-jacket, M, adjustable delivery-spout J y y′, with the adjustable guide-way E, scrapers R and S, when combined and arranged substantially in the manner as hereinbefore set forth.

5. The combination of the hinged adjustable brushes T T′ with the adjustable guide-way E, and scrapers R and S, when combined and arranged substantially in the manner as and for the purposes hereinbefore set forth.

121,629.—COMBINED PULVERIZER AND CORN-MARKER.—Thomas Brown Jones, Hiawatha, Kan.

Claim.—The hereinbefore-described pulverizer and corn-marker, consisting of the runners A, connecting-planks and pulverizers B, strap C, tongue D, and clevis E, when said parts are constructed and combined substantially as and for the purpose specified.

121,630.—GLOVE.—Harvey Z. Kasson and Alexander J. Kasson, Gloversville, N. Y.

Claim.—The thumb of a glove or mitten, composed of two pieces, cut, as herein shown and described, so as to be applied either to a round or oblong hole of a glove or mitten.

121,631.—MEDICAL EXTRACT FROM HEMLOCK BARK.—Simon H. Kennedy, Johnstown, N. Y.

Claim.—As an article of manufacture for medicinal purposes, a fluid extract obtained from hemlock bark and other barks containing a large percentage of tannin, by the process substantially as herein described.

121,632.—DEVICE FOR POINTING WIRE.—Robert Kent, Brooklyn, N. Y.

Claim.—An adjustable wire-drawing machine, consisting of the rollers B, having grooves c of gradually-diminishing depth and width, geared together, and provided with a holding-bar, D, for operation as herein described.

121,633.—CHIMNEY-TOP.—Thomas Ketchen, New York, N. Y.

Claim.—The arrangement of the shutters E and wings D in a chimney-top, as shown and described, for the purpose set forth.

121,634.—STENCILING APPARATUS.—Henry Kimball, Poughkeepsie, N. Y.

Claim.—1. In combination, two sector-shaped blocks pivoted together, one bearing the inking-cushion and the other bearing the stencil-plate, substantially as specified.

2. The improved instrument for stencil-printing, having the handle B, stencil-plate A, pivoted block C, and inking-cushion D, as and for the purpose set forth.

121,635, antedated November 25, 1871.—CAR-STARTER.—Charles P. Leavitt, New York, N. Y.

Claim.—1. The fusee C, in combination with the car-axle d, cord Y, and spring R, substantially as described, and for the purpose set forth.

2. The friction-wheels S, in combination with the strap H, the drum C′, and fusee C upon the car-axle d, substantially as described, and for the purpose set forth.

121,636.—SAWING-MACHINE.—Ira B. Lewis, Belvidere, Ill.

Claim.—1. The construction and arrangement of the straps A, wheel B, frame standard C, vibrating frame D, rods F, saws E, saw-frames E′, the clamping parts G, H, I, J, K, L, and M, or their equivalents, the shafts O R, gears P Q, fly-wheel S, pitman T, and handles U U′, substantially as and for the purpose set forth.

2. The spring-hooks f, as and for the purpose specified.

3. The hinged or folding handles U U′ and legs V, when constructed, arranged, and operating in the manner and for the purpose set forth.

121,637.—WATER-ELEVATOR. — Thomas J. Lovegrove, Philadelphia, Pa.

Claim.—1. A centrifugal liquid elevator, in which are combined an enlarged cylindrical base, A, a column, B, of smaller diameter, and a tapering or conical casing, C, between the said base and column, all substantially as specified.

2. The combination, substantially as described, of the chambers E and F, conical casing C, and column B.

3. The blade H′ secured to the shaft G, and having one or more enlargements, H, adapted to a chamber or chambers, F, communicating with the column B.

4. The combination of the blades H and H′ secured to the shaft G and adapted to the chamber F, casing C, and column B, substantially as herein set forth.

5. The combination of the partition or flange b between the chambers E and F with the blade H revolving in the latter of the said chambers.

6. The combination of the blade H with the spiral flange K′ arranged within the conical casing C, and forming a continuation of the spiral flange K of the column B.

121,638.—MOTOR FOR SEWING-MACHINES.—George W. Manson, New York, N. Y., assignor of one-half his right to Samuel Keefer, East Orange, N. J.

Claim.—1. The combination, with the coiled spring-case F and the train of gears to operate a sewing-machine, of the worm gear-wheel g and worm g′ on the vertical shaft G, the latter being operated by a removable crank-handle L and short gear-shaft J, the parts being arranged and operating substantially as described.

2. The brake k, provided with inclined slots q, spring l, and the arm s of the standard E having pins r, in combination with the brake-wheel e on the shaft C, arranged and operating substantially as and for the purpose described.

3. In combination with the brake k, arranged as described, the spring l and brake-wheel e, the rods n o, double rack-arm m, and treadle p, all arranged to operate as herein described and shown.

121,639.—VENTILATOR.—Ambrose Marriott, St. Louis, Mo.

Claim.—1. The ventilator, consisting substantially of the pivoted plate F, in combination with the automatic regulating device I J K, as set forth.

2. In combination with the elements E F I J K, the adjusting device M N, as set forth.

121,640.—PRESERVING EGGS.—William S. Marsh, Raymond, Wis.

Claim.—The method of preserving eggs by the successive application thereto of alum and sulphur, in the manner described.

121,641.—STAIR-ROD. — Henry C. Marston, New York, N. Y., assignor to himself and Franklin W. Brooks, same place.

Claim.—The stair-rod fastening herein described, consisting of a screw, A, and a pair of leaves, B, forming the button or head thereof, united by sleeves x y and pintle C, substantially as shown.

121,642. — APPARATUS FOR FITTING AND LAYING OUT GARMENTS. — William H. Mayer, Newark, N. J.

Claim.—An apparatus for fitting and laying out garments, consisting of sections 1 2 3 4, with eyelets a, screws b, screw-nuts c, strap B, button A, and hinged plate provided with slots e, the whole constructed, combined, and operated as shown and set forth.

121,643.—TRAVELER FOR VESSELS.—George Melville McClain, Rockport, Mass.

Claim.—The traveler as made with the stirrup or yoke to receive and hold the slide-block, and with the eye for connecting the traveler to a jib, all as described, in combination with the said slide-block, arranged with and notched upon the yoke, as set forth.

121,644. — STIRRUP FOR CART AND DRAY SHAFTS.—William B. McClure, Alexandria, Va.

Claim.—A stirrup provided with friction devices, substantially as described.

121,645.—COMPOUND FOR HARDENING IRON AND STEEL.—John McDonald, Kankakee, Ill.

Claim.—The above compound, as and for the purposes described.

121,646. — FASTENING FOR MAIL-BAGS.—Thomas McGrane, New York, N. Y.

Claim.—The ring B and strap D, with a strap, C, having staple E, keeper F, and key G thereon, when all are arranged and applied to a mail-bag, as and for the purpose specified.

121,647.—BED-BOTTOM.—Alonzo D. McMaster, Rochester, N. Y.

Claim.—The combination of the arched ends A, having the gains b and rounded projections b′, in combination with the India-rubber straps B, board D, and slats C, substantially as shown and described.

121,648. — GRAIN-DRILL. — Daniel E. McSherry and Jacob H. Landis, Dayton, Ohio; said Landis assigns his right to said McSherry.

Claim.—1. The hoe L hinged to the plate, and provided at the front with the flange or arm g having the laterally-projecting ribs formed thereon, said hoe being secured to the beam, as herein shown and described.

2. The funnels k pivoted to the seed-cups, and having the spouts R secured by means of the lug j and pin i, whereby the spouts can be arranged at any desired angle, and will also adapt themselves to the varying positions of the beams as the latter are adjusted, as set forth.

3. The brackets M, constructed and applied as described, whereby the hopper is supported underneath upon the handles D, as set forth.

121,649.—CORN-PLANTER. — Edwin James Myers, Onawa, Iowa.

Claim.—The axle C, bent so as to form cranks parallel to each other or on opposite sides of the axle, in combination with the slotted levers E E and F F, for the purpose of operating the slides H H, substantially as and for the purposes set forth.

121,650.—WINDOW-AWNING.—Charles Carroll Moore, New York, N. Y.

Claim.—The jointed or hinged bar E, in combination with the lower ends of the triangular pieces

D and the central piece B, substantially as herein shown and described, and for the purpose specified.

121,651.—INLAYING PLASTIC PAVEMENT.—George H. Moore, Norwich, Conn.

Claim.—1. Inlaying a plastic block of concrete in the position in which it is to remain with a colored plastic material.

2. Inlaying a plastic concrete block while in position with a colored plastic material, in the manner and by the means substantially as described.

3. Inlaying or inserting a previously-prepared figure or ornament into a plastic block of concrete molded in the position in which it is to remain.

121,652. — PICTURE-FRAME HANGER. — Charles H. Moulton, Des Moines, Iowa, assignor of one-half his right to Charles Hast, same place; said Hast assignor to Conrad Brotchi, same place.

Claim.—The combined hook and buckle C, to operate in connection with the plate A A, substantially as described, and for the purposes specified.

121,653.—MACHINE FOR ROLLING HARROW-TEETH.—Samuel C. Murdoch, Pittsburg, Pa.

Claim.—The series of die-grooves *s* and *t*, each groove rectangular in cross-section and having converging walls or bounding surfaces, and the series of tongues or projections *u v*, each tongue rectangular in cross-section and in length and breadth corresponding accurately to the die-grooves, and with eccentric peripheries jointly with the rolls and with the adjustable guides and stops, said series of grooves and tongues, two or more of each in number, being from first to last of diminished area, and used for the gradual reduction of the bar to a taper form, in the manner herein set forth.

121,654. — GATE.—Vincent Campbell Newland, Sparta, Wis.

Claim.—The platform A, gate B, posts C, pulleys E, ropes *d* and *d'*, levers L, and bar M, when combined and operating together, as described.

121,655.—REFRIGERATOR.—John P. Oeth, Canton, Mo.

Claim.—The perforated or wire-gauze cylinder E, provided with the discharge-faucet D, and arranged in the suspended and removable ice-receptacle B, and all combined with the case A, and constructed as herein shown and set forth.

121,656, antedated November 20, 1871.—DRAFT-POLE FOR HORSE-CARS.—Samuel A. Otis, Boston, Mass.

Claim.—The combination of the adjusting screw eye-piece H with the pole A, standard E, and coupling-pin K, substantially as described, and for the purpose set forth.

121,657.—CLOTHES-WRINGER.—Sidney W. Palmer and J. Foreman Palmer, Auburn, N. Y.

Claim.—1. The wooden roller H, constructed as described, and secured upon its shaft I, in the manner substantially as shown.

2. The cam-lever O, provided with the cam O' and flattened portion *e*, in combination with the box D, with the connecting-link, and with the spring M, substantially as and for the purpose set forth.

3. The cam-lever O, the links M, and the spring N, combined substantially as and for the purpose shown and described.

4. The boxes B and D, the cam-lever O, the links M, and the spring N, when the several parts are constructed and combined, substantially as and for the purpose specified.

5. The spring-holder T, provided with the flanges U, notches *u*, and studs *t*, in combination with the spring N, substantially as and for the purpose shown.

6. In combination with the spring N and holder T the adjustable tension-screw V, substantially as and for the purpose set forth.

7. The wooden bar G, provided with the beads or flanges *g*, and combined with the spring N and its attachments, substantially as and for the purpose shown and described.

8. The bolt P, the clamp or jaw Q, and the set-screw R, when constructed and combined with each other and with the frame A, substantially as and for the purpose specified.

9. In combination with the bolt P, jaw Q provided with the hooked end *r*, set-screw R, and frame A provided with the hook *r'*, the rubber band S, substantially as and for the purpose shown.

10. In combination with the frame end A, provided with the lugs F and *w*, and with the rollers H and K, the guards W, when constructed substantially as and for the purpose shown.

121,658.—STEAM-PUMP.—Albert Perry, New Philadelphia, and George W. Perry, Mahanoy City, Pa.

Claim.—1. The plunger *e*, in combination with the pump *b* and fixed tube *i*, constructed and arranged as specified.

2. The arrangement of the tube *s*, rod *t*, spring *u*, blocks *w*, latches *x*, wedge *y*, arm *p*, rod *o*, arm *r*, cranks *u l*, their connecting rock-shaft, and the plunger *e*, combined as described.

121,659. — SAFETY-VALVE FOR STEAM-BOILERS.—Andrew J. Prescott, Catawissa, Pa.

Claim.—1. The combination of the nut H, notched or recessed on its outer side, the catch-spring G with projection *a*, screws *b b*, wire or wires *d*, and seal *e*, all substantially as and for the purposes herein set forth.

2. The combination of the ball-and-taper valve A, cup B, concave cap C, cage E, spring-case D, nut H, and catch-spring G, all constructed and arranged substantially as and for the purposes herein set forth.

121,660.—CAR-COUPLING.—George W. Putnam, South Glens Falls, N. Y.

Claim.—1. The combination of the slide C D with pin *i*, hinged plate E, side arms G G, and pin H, all substantially as and for the purposes herein set forth.

2. The combination of the draw-head A with flaring mouth B, slide C D, spring *a*, guides *b b*, pin *i*, plate E, side arms G G, and pin H, all constructed and arranged substantially as and for the purposes herein set forth.

121,661.—WATER-GAUGE.—Jean Elie Richard, Columbia, S. C.

Claim.—The combination of the plug P with the cylindrical portion D and its cap G, whether said plug be constructed as in Figs. 1 or 2, substantially as shown and described.

121,662. — SPRING FOR VEHICLES.—Lewis Righter, Salem, Ohio.

Claim.—The combination of the springs A and B, crossing each other at right angles at their centers, and provided with the elastic blocks *a a* between each end of each spring, all substantially as set forth.

121,663, antedated November 25, 1871.—TIRE FOR WHEELS OF VEHICLES.—Lewis Righter, Salem, Ohio.

Claim.—A tire, D, provided with an inner central groove, *a*, and inner-projecting flanges *b b*, either with or without a corrugated or fluted exterior surface, substantially as described.

121,664.—SAW-MILL CARRIAGE.—Titus H. Russell, Lebanon, N. H.

Claim.—The friction driving-roller T and movable pressure-rail or rails U, acting in combination with the carriage B and set-beam E of a saw-mill, substantially as and for the purpose herein specified.

121,665.—MEDICAL COMPOUND OR COFFEE-ANTIDOTE.—E. Delmar de Hays Saint Cyr, Lowell, Mass.

Claim.—The coffee-antidote or medical compound, made of the ingredients or their equivalents mixed together in the proportions substantially as described, for the purpose specified.

121,666.—LIFE-DETECTER FOR COFFINS.—Theodore A. Schroeder and Hermann Wuest, Hoboken, N. J.

Claim.—The lid *a* and tube A, provided with spring-catch *b*, all constructed and arranged as shown and described, whereby said lid will open by its own gravity when the catch is operated, and thus simultaneously admit fresh air to the tube and display a signal, as specified.

121,667.—STOVE-BOTTOM. — Daniel Schuyler, Titusville, Pa.

Claim.—The combination of the perforated stove-bottom B with its slide S and handle H, together with the pipe P, substantially as and for the purposes above set forth.

121,668.—HAT OR BONNET.—David Scrymgeour, Foxborough, Mass.

Claim.—1. The process of manufacturing hats and bonnets in imitation of straw, Leghorn, Panama, or similar goods, from paper-pulp and fabric combined, substantially in the manner herein set forth.

2. A hat or bonnet made of paper-pulp and fabric combined in imitation of straw, Leghorn, Panama, or similar goods, substantially in the manner herein shown and described, as a new manufacture.

121,669.—FRUIT AND VEGETABLE PARER.—Theodore Searing, South Norwalk, Conn.

Claim.—The herein-described paring implement, consisting of the handle A, ferrule B, guard C, and the two-edged pointed blade D, constructed, arranged, and operating substantially as described.

121,670.—WHEEL-CULTIVATOR.—Thompson C. Sebring, Milford, assignor to Byron G. Stout, Walter D. King, and Algernon S. King, Pontiac, Mich.

Claim.—The metallic shovel-standard J, having a vertical groove at its rear end, flattened at the top, bent in a semicular form, and braced to the frame, and secured to the circular shaft C by means of the semicircular bolt *d*, which is passed through an opening in the standard below the shaft and clinched, and by the nut *f* above the shaft, substantially as and for the purposes set forth.

121,671.—PAPER-FILE.—John A. Shannon, Perrysburg, Ohio.

Claim.—The construction and arrangement of the angle-rod A having the strip A' hinged thereto, and provided with the pins *b*, the elastic bands D, and the cord or tape E, with or without the covers C, as and for the purpose set forth.

121,672.—WASHING-MACHINE.—Thomas F. Shaw and John Bringman, Tiffin, Ohio.

Claim.—1. In a washing-machine constructed substantially as herein described and where the water is passed and repassed through the clothes, sponge or other filtering material arranged so that the water must pass through the same each time after going through the clothes, for the purposes set forth.

2. The pipe or reservoir D inclosing sponge or other suitable filtering material, and connected by pipes G and M with the steam-generator H and vessel B, respectively, substantially as and for the purposes herein set forth.

3. The valve *d* situated in the pipe G within the steam-generator H, substantially as and for the purposes herein set forth.

4. The combination of the furnace A, vessel B, reservoir D with filtering material E, pipes G, M, steam-generator H, pipes I J, false-bottom K, and horizontal pipe L with spouts *b b*, all constructed and arranged substantially as and for the purposes herein set forth.

121,673.—SLED-KNEE.—Albert L. Shears, Flint, Mich.

Claim.—A metallic sled-knee, consisting of the wrought rods A and B welded together at the bottom, and having the cast-iron cast thereon in such a manner as to form the foot-plate I, the body C, and the top-plate D, all in a single rigid piece, substantially as described.

121,674.—IMITATION HAIR-CLOTH.—Charles Sherriff, Newark, N. J.

Claim.—An artificial or imitation hair-cloth composed entirely of cotton, manufactured and prepared substantially as herein set forth and described.

121,675.—COUPLING FOR VEHICLES.—Lewis C. Sims, Martinsburg, Ohio.

Claim.—1. The reach A, made round, with a square part, *a*, mortised for the circle B to pass through, in combination with said circle, the spring C, and set-pin or screw *b*, all substantially as and for the purposes herein set forth.

2. The coupling-pin *d* and bar *d'*, attached to the front axle by the clips E, substantially as herein set forth.

3. The box *f* and bar *f'* attached to the hind axle by the clips E', substantially as herein set forth.

4. The combination of the reach A, circle B, springs C, axles D D', pin *d*, box *f*, and braces H H with swivels *h h*, all constructed and arranged substantially as and for the purposes herein set forth.

121,676.—PLOW.—Justin Malancen Smith, Haddam Neck, Conn.

Claim.—1. The combination of the share, provided with the downwardly-convex cutting-edge and concave upper surface, with the convex mold-board, as and for the purpose specified.

2. The plow-share having the downwardly-convex cutting-edge, and the concave upper surface at and above the said cutting-edge, but changing to a flat surface, or thereabout, at the junction with the mold-board, substantially as specified.

3. The improved colter, having self-sharpening teeth formed by grooves F, alternating on opposite sides of the same, as specified.

121,677.—ROTARY-VALVE. — Daniel Snowhill and John D. Bown, Spottswood, N. J.

Claim.—The cylinder C having the steam-chest cast therewith, and provided with steam-passages *d a b h*, in combination with valve B having ports *e f g*, all constructed and arranged substantially as and for the purpose specified.

121,678.—BELLOWS.—John H. Snyder, Rockford, Ill., assignor to himself and George Hepburn, same place.

Claim.—In combination with the reservoir C, the feeders D D', rock-shaft G, lever G', brackets I, links I', cross-head E, and ways F, arranged within the case A B, and operating substantially as set forth.

121,679.—MANUFACTURE OF ILLUMINATING-GAS. — Theodore G. Springer, Fayette City, Pa.

Claim.—1. Feeding hydrocarbon liquids into a

vacuum or partial vacuum formed in a retort heated to a sufficient degree to decompose the liquid and form a fixed gas, substantially for the purposes herein set forth.

2. Feeding hydrocarbon liquids directly into a vacuum or partial vacuum formed in a retort heated to a sufficient degree to decompose the liquid and form a fixed gas, and withdrawing said fixed gas from the retort in the same ratio as the liquid is fed in, by means of a vacuum or partial vacuum created and maintained in the retort by continual suction, substantially as herein set forth.

3. In a decomposing-chamber or retort heated sufficiently hot to convert hydrocarbon liquids into a fixed gas, producing a vacuum or partial vacuum, and continuing the same while the liquids are being introduced by creating a constant suction on said chamber or retort, substantially for the purposes herein set forth.

4. Feeding hydrocarbon liquid to a gas-retort by hydraulic pressure, substantially as herein set forth.

5. The combination of the furnace A, retort C with caps *b b* and nozzle *a*, all constructed and arranged substantially as and for the purposes herein set forth.

6. The mixing-tube N with end of coil J, air-inlet *d*, outlet O, and tube P connecting with the retort C, all constructed and arranged as described to create and maintain a vacuum in the retort and mix the fixed gas with the vapor-gas, substantially as herein set forth.

7. The combination of the furnaces A H, retorts C I, tanks G K L, coil J, mixing-tube N, and connecting-tubes E M P, all constructed and arranged substantially as and for the purposes herein set forth.

121,680.—LOCK.—Thomas Stewart, Philadelphia, Pa.

Claim.—The combination, with a lock, of a key-hole guard, H, caused to slide by and with the bolt when the latter is operated by a key inserted through the inner key-hole *e'*, and to act as a supplementary tumbler for the said bolt when the latter is operated by a key inserted through the outer key-hole *e*, all substantially as specified.

121,681. — FLOUR-BOLT. — Roswell H. St. John, Bellefontaine, Ohio, assignor to himself, Jacob Pim, and John Marshall, same place.

Claim.—1. The pivoted tripper C constructed with cam-faces *o* and *n*, in combination with the stops *m l*, the former adjustable and of the form specified, for the purpose set forth.

2. The levers *s*, bell-cranks *q*, and links *r*, in combination with the springs *u*, for operating the hammers *y* through pull-rods *w*, all constructed and arranged substantially as described.

121,682.—NAIL-HAMMER.—Hector M. Stocum, Painted Post, N. Y.

Claim.—The cap B, combined with the head of the hammer A, substantially as herein shown and described, for the purpose set forth.

121,683.—UNWINDER FOR BOOKED TOBACCO.—George Storm, New York, N. Y., assignor to Straiton & Storm, same place.

Claim.—The apron, drums, and friction-rolls for unwinding booked tobacco, combined, as described, with a dampening roll, substantially in the manner and for the purpose described.

121,684. — DEVICE FOR ADMINISTERING PILLS.—John Sullivan, Thornton, Canada.

Claim.—The device for administering pills, consisting, essentially, of the vessel A provided with handle B and spout C, the latter being extended to form the inclined nozzle D and mouth-piece E, intersected by the inclined pill-chute F, substantially as described.

121,685. — WRENCH. — George C. Taft, Worcester, Mass., assignor to John H. Coes, same place.

Claim.—1. The combination, with the handle B, ferrule F, and bar-shank A', of a screw-thimble or nut I, substantially as and for the purposes set forth.

2. The combination, with a wood handle in a screw-wrench, of an adjustable screw-thimble or nut, for the purposes stated.

121,686.—SOUNDING-BOARD FOR PIANOS.—Edward L. Taylor, Jersey City Heights, N. J.

Claim.—A sounding-board platform, A B C D E, constructed substantially as herein shown and described, to adapt it to receive a piano, as and for the purpose set forth, whether the center-board be used or not.

121,687.—CALCULATING-MACHINE.—Robinson, Teasdale, Alberton, Ga.

Claim.—1. The combination of the cams W X, bars S, segments P, and springs Z, substantially as specified.

2. The disks D, having a notch G, stop H, notched bar L, tripping-pawl M, and the shifting frame, all combined and arranged substantially as specified.

121,688.—APPARATUS FOR SUPPORTING AND LOWERING COFFINS.—Charles A. Thompson and James O. Coleman, Hopkinsville, Ky.

Claim.—1. The bars A A, end pieces B C, shaft F, worm-gears G H, and belts L L, when the same are arranged to operate substantially as and for the purposes described.

2. The folding legs D, arranged in combination with the bars A A and end pieces B C, as described.

3. In combination with the revolving bars A A, the supports O O, as and for the purposes described.

4. The adjustable pulleys E and stirrup N, in combination with a lowering apparatus for coffins, substantially as described.

5. The brackets J and legs D, in combination with the ends B C of the lowering apparatus, substantially as described.

121,689.—PADDLE-WHEEL.—William Thomson, Madison, Wis.

Claim.—The combination of the filling F, channel E, and valve-opening G, substantially as and for the purpose described.

121,690. — CAR-COUPLING. — Theodore B. Tremper, Rockland Lake, N. Y.

Claim.—1. The combination, with the draw-heads D, of the socketed connecting-bar A, hooks F, springs I, and the triangular coupling-pin G, substantially as specified.

2. The said coupling-pin G, having the triangular extension K arranged as described, and the elbow-lever L combined with the draw-head, substantially as specified.

121,691. — GARDEN-HOE.—Frederic Trigalet, Astoria, N. Y.

Claim.—The hoe constructed with a cross-blade, *a*, oblique blades *b b*, and parallel blades *c c*, substantially as and for the purpose herein set forth.

121,692.—TRUSS-BRACE FOR AXLE-SKEINS.—Oliver Vanorman, Fond du Lac, Wis.

Claim.—The hooks on the ends of the truss-brace, together with the holes in the under side of the thimble or skein, substantially as and for the purpose set forth.

121,693.—LAWN CANOPY.—Frank H. Vick and William H. Vick, Rochester, N. Y.

Claim.—1. In combination with the frames A B C the roller *a*, for the purposes set forth.

2. The roller *a*, provided with double-grooved pulley *f* and cords *g* and *g'*, substantially as and for the purposes set forth.

3. In combination with the posts B, arms C, and roller *a*, the canvas D, arranged to be folded up, substantially as set forth.

4. The folding canopy A B C D, provided with roller *a*, tie-rods *b* and *d*, and folding-cords *g g'*, when the parts are arranged to be detached, substantially in the manner set forth.

121,694. — CARRIAGE-WHEEL HUB. — Holland E. Vick, Alliance, Ohio.

Claim.—1. The thimbles C D, having rims or flanges *c d* in the chambers thereof, in combination with the wood hub A and axle-box H, provided with a head, J, at one end, and a screw, I, at the other, as and for the purpose substantially set forth.

2. The thimbles C D having mortise notches E therein, lugs G G, and webs F, and provided with a rim or flange, *c d*, in combination with the core A inclosed within said thimbles, and secured together by means of the pipe-box and screw thereon when the spokes are in place, as and in the manner substantially described.

121,695. — SASH-HOLDER. — Felix Walker, New Orleans, La.

Claim.—1. The sharp point *d* formed on the eccentric catch C, substantially as and for the purposes herein set forth.

2. The eccentric catch C provided with a swell or bulge, *b*, and pivoted in the bracket A B so as to have a large part of its weight below the pivot, substantially as and for the purposes herein set forth.

121,696. — ORNAMENTATION OF GLASS.—William George Webb, Wordsley, Great Britain, assignor to William Langdon Libbey, New Bedford, Mass.

Claim.—1. For the purpose of engraving and ornamenting glass-ware, the combined processes of printing and etching, substantially as hereinbefore specified.

2. In the process of etching glass, submitting the latter to the intermittent action of the acid, substantially as and for the purpose set forth.

121,697.—CONDENSED-STEAM EXHAUST FOR STEAM-ENGINES. — William H. Wheatland, Newark, N. J.

Claim.—The combination, with the cylinder of a steam-engine, of the exhaust-tube A, valve C, and springs D, the said tube being provided with a valve-seat, B, and the valve being arranged to close thereon by the steam-pressure and to be lifted off by the spring, all substantially as specified.

121,698. — SHINGLE-MACHINE. — Julius P. Wilder, Tonawanda, N. Y.

Claim.—The combination, with the knife of a lumber-cutting machine, of a marking-tool, arranged to mark the block at each downward stroke of the knife, substantially as hereinbefore shown and described.

121,699.—TUCK-FOLDER FOR SEWING-MACHINES.—Oscar D. Woodbury and Edwin C. Woodbury, New York, N. Y.

Claim.—1. The combination of a loose gauge and folder for operation within the fold or tuck with a folder-holder on the outside of the cloth, when said devices are constructed to admit of the travel of the folded cloth between them, substantially as specified.

2. The folder A, constructed of a plate, *b*, and slide *c*, provided with stops *d d e* and an overhanging tongue or wing, *f*, essentially as described.

3. The folder-holder B, constructed of a plate, *k*, bent or raised in front, as described, and formed with loops or eyes *o o*, in combination with the adjustable finger or slide *l*, substantially as specified.

4. The combination of the folder A having an overhanging tongue or wing, *f*, with the folder-holder B having a forwardly-projecting finger or slide, *l*, for operation in relation with the wing *f* and cloth or fabric interposed between them, substantially as specified.

121,700.—REED ORGAN.—George W. Woodruff, Hartford, Conn., assignor to John Farris, same place.

Claim.—1. The bar *e* for dividing the air entrance into two parts, *c* and *d*, substantially as herein described.

2. A reed-chamber with two upper or entrance apertures, one for the reed, covered by the removable flap *f*, and the other for the air, covered by the valve *i*, substantially as described.

REISSUES.

4,654. — MACHINE FOR MANUFACTURING CORKS.—Mary F. Crocker, West Winsted, Conn., administratrix of estate of William R. Crocker, deceased.—Patent No. 13,714, dated October 30, 1855.

Claim.—1. The combination of the cylindrical cutter constructed and cutting as described, and having a revolving motion, with a rod operating substantially as described to aid in ejecting the cork after the cork is cut by said cylindrical cutter.

2. The slitted cylindrical cutter, substantially as described.

3. The combination of the cylindrical cutter with a rod contained within the same, the latter being connected to and operating with the sliding shaft for bringing up the block of cork-wood to be cut, substantially as described.

4,655.—GOVERNOR FOR STEAM-ENGINES.—Junius Judson, Rochester, N. Y.—Patent No. 33,743, dated November 19, 1861.

Claim.—The combination of the swivel-collar A with the governor-balls C C, and with the rod *b* connecting said balls directly with the valve, as herein described.

4,656.—Division A.—REVOLVING CASTER.—Cyrus H. Latham and John S. Lugg, Lowell, Mass., assignors to Edward P. Woods, Daniel Sherwood, and Cyrus H. Latham.—Patent No. 116,722, dated July 4, 1871.

Claim.—As a new and improved article of manufacture, a revolving castor constructed of twisted or other wire, the parts of which are screwed together and capable of being readily disconnected, nested, and packed in small compass for shipment, substantially as described, and for the purposes specified.

4,657.—Division B.—REVOLVING CASTER.—Cyrus H. Latham and John S. Lugg, Lowell, Mass., assignors to Edward P. Woods, Daniel Sherwood, and Cyrus H. Latham.—Patent No. 116,722, dated July 4, 1871.

Claim.—1. Uniting a series of wires which form part of a holder for bottles and other like articles of domestic use to the collar or part *b* by casting them thereto, substantially in the manner and for the purposes set forth.

2. Constructing the handle C of twisted wire, substantially as described and specified.

3. The combination, with the part D united to the collar or nut *b*, handle C, and screw *a*, of the revolving plate E provided with bottle-rings B, constructed and operated substantially in the manner described and specified.

4,658.—LUBRICATOR.—John B. Wickersham, Philadelphia, Pa. — Patent No. 70,058, dated October 22, 1867.

Claim.—1. Securing the glass fountain to the metallic socket, in the manner specified.

2. A movable stem, *e*, constructed as set forth, in combination with the glass fountain and metal socket *g*, as set forth.

3. The wire covered with fibrous material and applied, in the manner specified, to a lubricator, for the purpose set forth.

4. A glass fountain, with a neck on the lower end, secured to a metal socket and rendered oil-tight by sealing-wax melted between the parts.

5. A lubricator with a glass reservoir and metallic connections, made of white metal or pewter, for the purpose and substantially as set forth.

6. A lubricator with a glass reservoir, having a contracted neck at the lower end and a metallic cap attached thereto and receiving a tube of white metal, substantially as set forth.

4,659.—MACHINE FOR MAKING TIN CANS.—Eliphalet W. Bliss, Brooklyn, assignor to Charles Pratt, New York, N. Y.—Patent No. 82,481, dated September 29, 1868.

Claim.—1. In a machine for uniting the heads or ends to the bodies of sheet-metal cans, the combination of two or more clamping-jaws adapted to be moved against the edges of the can-head, a center piece or anvil to support the can, and suitable means for holding the can in place, substantially as and for the purpose specified.

2. The clamping-jaws and anvil, constructed with beveled pressing-faces, substantially as described, and for the purpose specified.

3. In combination with the anvil and clamping-jaws, a clamping device for holding the can and head upon the anvil while the jaws are being operated, substantially as described, for the purpose specified.

4. In combination with the anvil and the clamping-jaws, the levers F and sliding cam H, substantially as described, for the purpose specified.

5. The square or pyramidal cam-slide, in combination with the rigid central guide, the cam-levers, and the clamping-jaws, substantially as described, for the purpose specified.

6. The combination of the cam-slide with the connecting-rods M and treadle L, substantially as described, for the purpose specified.

7. The arrangement and combination of the cap O, lever P, connecting-rod K, and treadle S, substantially as described, for the purpose specified.

4,660.—LAMP.—Halvor Halvorson, Nashua, N. H., assignor, by mesne assignments, to Rufus S. Merrill, William B. Merrill, and Joshua Merrill.—Patent No. 25,506, dated September 20, 1859; reissue No. 4,413, dated June 6, 1871.

Claim.—1. The combination, in a lamp-burner, of the following elements, namely: Two wick-tubes, with a draught-passage between them; a single-slotted deflector, through which the flames from the two wicks pass in the form of a single flame; appliances for holding the lamp-chimney in place; and a screw-threaded base, substantially as herein shown and described.

2. In combination with the elements named in the preceding clause, a perforated air-distributer for steadying the draught, substantially as described.

3. A lamp-burner containing the following elements, namely: a screw-threaded base, a perforated air-distributer, two wick-tubes with draught-passage between them, a single-slotted deflector, appliances for holding the lamp-chimney, and means for adjusting the wicks, substantially as herein shown and described.

4. In a lamp-burner in which two wick-tubes with a draught-passage between them are combined with a single-slotted cap or deflector, in the manner herein described, the combination, with said wick-tubes and the base by which they are carried, of the said deflector, the air-distributer, and the chimney-rest, when arranged to be removable from and adjustable upon the other portion or portions of the burner bodily and together, substantially as shown and described.

5. The combination, in a lamp-burner, substantially such as described, of the two wick-tubes and the valve for regulating the supply of air which passes between said tubes to the flames, substantially as shown and set forth.

6. The combination, in a lamp-burner, substantially such as described, of the two wick-tubes, the valve regulating the supply of air passing up between said tubes to the flames, and the dome adjustable to a greater or less height above the wick-tubes, substantially as shown and set forth.

7. The arrangement of the wick-raising devices, substantially as shown and described, so that one or more of the wheels or pinions on the one shaft may gear into or engage directly with a corresponding pinion or pinions on the other shaft, for the purpose stated.

4,661.—IRON TENDER-FRAME.—Benjamin W. Healey, Providence, R. I.—Patent No. 103,878, dated June 7, 1870.

Claim.—The improved frame for railway carriages, consisting of the parallel longitudinal exterior and interior bars of channeled iron, united by end bars and braced laterally at right and oblique angles, substantially as and for the purposes specified.

4,662.—FINISHING VULCANIZED-RUBBER BELTINGS.—Charles McBurney, Boston, Mass.—Patent No. 115,880, dated June 13, 1871.

Claim.—The within-described process of successively heating, stretching, and cooling rubber belting after it has been vulcanized, substantially as and for the purpose set forth.

4,663.—SEWING-MACHINE NEEDLE.—Charles H. Willcox, New York, N. Y., assignor, by mesne assignments, to The Willcox & Gibbs Sewing-Machine Company.—Patent No. 31,757, dated March 19, 1861.

Claim.—An eye-pointed sewing-machine needle, the same forming a new article of manufacture, having combined with its round shank a slot or groove, substantially as and for the purpose or purposes herein set forth.

DESIGNS.

5,396.—LADY'S DRESS-COMB.—Willard O. Capron, New York, N. Y.

Claim.—The design for ladies' dress-comb, substantially as herein shown and described.

5,397.—HARNESS SADDLE-BRACKET.—James L. Jackson, New York, N. Y.

Claim.—The design of the shape and configuration of the harness saddle-bracket, substantially as described.

5,398.—MANGER.—James L. Jackson, New York, N. Y.

Claim.—The design of the shape and configuration of the manger, as described and represented also, the sectional shape of the top plate *c*, as shown.

5,399.—HOOK FOR HARNESS.—James L. Jackson, New York, N. Y.

Claim.—The design and shape of the configuration of the hook *a* with the bracket portions *b*, as represented.

5,400.—SADDLE AND BRIDLE BRACKET.—James L. Jackson, New York, N. Y.

Claim.—The design of the shape and configuration of the saddle-bracket, the plate sustaining the same, and the open-work arch for the bridle, substantially as described and shown in the drawing.

5,401.—BOTTLE.—Nehemiah Sleeper, Burlington, N. J.

Claim.—The design for a bottle, substantially as described and illustrated.

5,402.—CARPET-PATTERN.—James Edward Stone, Kidderminster, England, assignor to Arnold Constable & Co., New York city.

Claim.—The design for a carpet, as shown.

5,403.—BUCKLE.—Andrew T. Thayer, New York, N. Y.

Claim.—The design for the sheet-metal buckle, as described and represented.

5,404.—TOY BUILDING-BLOCKS.—Rodney G. Britton, Springfield, Vt.

Claim.—The design for toy building-blocks, as herein shown and described.

5,405.—DOOR-HANDLE.—George Munson, Purnort Bradford, and Charles H. Bradford, New Haven, Conn, assignors to Sargent & Co., same place.

Claim.—The design for the handle, base, and other parts, as shown in the accompanying illustration, whether separately or collectively.

5,406.—HANGING-VASE.—John Runey, Somerville, Mass.

Claim.—The design for ornamenting a hanging-vase, as described and shown.

5,407.—SEWING-MACHINE FRAME.—Jerome B. Secor, Chicago, Ill.

Claim.—The design for a sewing-machine, consisting of the goose-neck and cloth-plate, as shown and described.

TRADE-MARKS.

565.—BOOTS AND SHOES.—Francis & Mallon, Boston, Mass.

566.—OIL-CANS.—John P. Haines, Irvington, N. Y.

567.—HARNESS.—James R. Hill & Co., Concord, N. H.

568.—SHAWLS, CLOAKINGS, BEAVERS, &c.—Home Woolen Company, Hartford, Conn.

569.—WEARING APPAREL FOR PROTECTING LUNGS, &c.—Peter Lear, Boston, Mass.

570.—CHEWING-TOBACCO.—Charles R. Messinger, Toledo, Ohio.

571.—CUTTERS FOR HARVESTERS, &c.—Sweet, Barnes & Co., Syracuse, N. Y.

572.—FLOUR.—W. H. Tenney & Sons, Georgetown, D. C.

ISSUE OF DECEMBER 12.

PATENTS.

121,701.—SASH-SUPPORTER.—William Hammond Brown, Bangor, Me.

Claim.—The combination of the rack *h* and pinion *g*, provided with means, as set forth, for operating the latter with the window-frame A, the sash B, the parallel bars C D, their spring *e* and connecting-links *b b*, all arranged in manner and to operate as described.

121,702, antedated November 22, 1871.—TOY STEAM-ENGINE.—Alexander Buckman, Brooklyn, N. Y., assignor to himself and John W. Huffington, same place.

Claim.—The arrangement of the two cylinders A A′ in reversed position, and having their trunnions connected by a single interjacent spring, S, and ports so arranged as to rotate their shafts P P′ in opposite directions, substantially as herein set forth.

121,703.—DOOR-PLATE.—William A. Caron, Springfield, Mass.

Claim.—As a new article of manufacture, a door-plate having letters illuminated by a stick of phosphorus pressed against it and air supplied in such small quantity as to preclude active combustion, while causing the phosphorus to evolve sufficient illuminating-gas to make the letters visible in the dark, the parts being arranged and constructed for that purpose, and substantially in the manner shown and described.

121,704.—HALTER.—Junius Carpenter, Wilmington, Ohio.

Claim.—1. The improved halter, having the continuous adjustable crown and throat-strap D D¹, buckles B with square part *b* and ring part *b*¹, buckles C composed of the parts *b*⁴ *b*⁵, cheek-straps A, and continuous nose and chin-strap E, all arranged as described.

2. The improved halter-buckle B, having the ring part *b*¹, and cheek-piece holder *b* having the plates *b*² *b*³ with studs *c*, as and for the purpose set forth.

3. The buckle G, having the plate *f*, stud *g*, and loop *g*′, as and for the purpose set forth.

4. The improved halter-buckle C, constructed with the united frames *b*⁴ *b*⁵, plates *c*¹ *c*³, studs *c*² *c*⁴, and bar *d*, all arranged as shown and described.

121,705.—LAWN-MOWER.—Dexter H. Chamberlain, West Roxbury, Mass.

Claim.—1. The arrangement of the rotating knives and their connections, movable around a spindle that has only one support in a frame, *c*, at one end of said rotating knives, as fully set forth and described.

2. The arrangement of the rotary cutters A A attached to the disks *i i i*′ and hollow spindle *k*, rotating around the dead spindle *l*, in combination with only one frame, *c*, on one side of the cutters, as and for the purpose as herein set forth and described.

121,706.—BOX FOR CARRIAGE-WHEELS.—William A. Clark, Westville, Conn.

Claim.—1. The pipe-box F, having the band or flange *n* formed thereon to fit over the end of the hub, substantially as described.

2. The box F provided with the groove *e*, in combination with the screw-cap D held in place on the axle by the collar B, all constructed and arranged to operate substantially as herein described.

121,707.—HOLLOW AUGER.—William A. Clark, Woodbridge, Conn.

Claim.—The stop A having the beveled slotted shank *c*, constructed and arranged to operate in connection with a hollow auger, as herein set forth.

121,708.—Flour-Bolting Machine.—John C. Cookson, Lancaster, Pa.

Claim.—The side elevators P P and spouts R and S, in combination with the double flues or suction-chambers C, substantially as shown, and for the purpose specified.

121,709.—Cattle-Guard for Railways.—William Darrah and Jacob Cutshall, Coshocton, Ohio.

Claim.—The arrangement of a series of horizontal bars, D D D, in combination with a series of rafters, A A A, and a railway track, substantially as herein shown and described, and for the purposes set forth.

121,710.—Safe.—John Farrel, New York, N. Y.

Claim.—The construction of the safe, consisting of the shell, having its four sides formed of the same sheet of metal, supported and braced within by angle iniside sustaining bars, in combination with a book-case of wood, having its wooden door affixed to the door of the safe, all substantially as specified.

121,711.—Bolt for Safe-Doors.—John Farrel and Jacob Weimar, New York, N. Y.

Claim.—The arrangement and combination, with the double lock or with two locks, of the independent bolts worked by a suitable frame carrying the frog, and operating in connection with the stationary fork and the latches of the locks, substantially in the manner and for the several purposes specified.

121,712.—Propulsion of Canal-Boats.—Harvey Fowler, Washington, D. C.

Claim.—The side wheels A A, with the curved springs C C projecting from the periphery of each, substantially as and for the purpose described.

121,713.—Propulsion of Canal-Boats.—Harvey Fowler, Washington, D. C.

Claim.—1. The foot, composed of its several parts, substantially as described, in combination with the stilt or setting-pole *f*, for the propulsion of boats or land vehicles.

2. The flexible swinging or oscillating bar *g* in connection with said stilt or setting-pole, substantially as and for the purpose set forth.

121,714.—Propulsion of Canal-Boats.—Harvey Fowler, Washington, D. C.

Claim.—1. The horizontal weighted bar or beam B and the vertical oscillating weighted spring standard D connected with the pendulums *c' c'*, substantially as described.

2. The supporting platform E and guard *e*, rollers, casters, elastic ligatures, and other spring-braces, or their equivalents, substantially as described.

3. The foot with its projecting teeth hinged or otherwise, in combination with the setting-pole; also the brace *o* and the reversible paddle connected with the flexible oscillating bar K, substantially as and for the purpose indicated.

121,715.—Photographic Background.—Albert R. Gould, Carrollton, Ohio.

Claim.—1. A revolving background for photographic purposes, combining in its construction two disks, adjustable with reference to each other, the rear one of which presents a surface of alternate black and white sectoral fields, and the front one alternate black sectoral fields and sectoral open spaces, substantially as and for the purpose set forth.

2. The spring E, pulley F, belt G, pulley H, clutches I and K, and lever L, with the disks C and D, when constructed and operating substantially as and for the purpose set forth.

121,716.—Hydrant.—Patrick H. Griffin, Albany, N. Y.

Claim.—1. The combination of the cock B and intermediate crank-duct C' with the coupling D, when all are constructed and arranged substantially as and for the purpose set forth.

2. The arm G attached to the key B or discharge-pipe F, and the catch H attached to the upper side of the cock B, in combination with the crank-duct C and coupling D, substantially as and for the purpose set forth.

3. The combination of the detachable guard M, detachable cover N, and box K with the discharge-pipe F provided with the arm G, cock B provided with the catch H, and the crank-duct C placed between the said cock and coupling D, substantially as and for the purpose set forth.

121,717, antedated December 9, 1871.—Electric Fire-Alarm. — Edward A. Hill, Chicago, Ill.

Claim.—1. The combination of the electro-magnets or cores *a* with the pivoted permanent magnet J and curtain I, substantially as and for the purpose specified.

2. The combination of the pivoted magnet J and curtain I with the sliding bar K provided with projections *m*, substantially as and for the purpose specified.

3. The combination of the plaster shell, or shell made of like material, *c*, with the tube *b* of a mercury-connector, as and for the purpose specified.

121,718. — Bottle-Wrapper.—William A. Hinman, New York, N. Y.

Claim.—In a wrapper for bottles, made of Cuba bast, the outer sheet A, split in the manner described, and applied to the bottle by being tied at both ends, in combination with the inner sheet B, arranged as described, and for the purpose specified.

121,719.—Apparatus for Mixing Air and Gas.—Thomas C. Hopper, Philadelphia, Pa.

Claim.—1. The plain continuous flat-surfaced partitions *a'*, in combination with the cylinders of the drums A and B of a mixer, substantially as and for the purposes hereinbefore set forth.

2. In a mixer the drums of which are provided with the plain continuous flat-surfaced partitions *a'*, as described, the arrangement and mode of operation whereby the gas-drum A and the air-drum B are driven by a motive power applied outside of their respective water-cases and the gas-drum caused to act exhaustively in relation to the retorts and supply main, substantially as and for the purposes hereinbefore set forth.

121,720.—Machine for Pressing Cloth.—Patrick Howe, Boston, Mass.

Claim. — In combination with the goose *f*, spindle *g*, and the pressing-arm *a*, the cylindrical end *e*, sleeve *d* provided with the slot-hole *h*, and hub *c* with its hole *f*, as and for the purpose set forth.

121,721, antedated December 9, 1871. — Lifting-Jack.—Isaac D. Johnson, Kennett Square, Pa.

Claim.—1. The trunnion-pin F with the projection or lug P on its posterior side, substantially as and for the purpose described.

2. The combination of the short arms of the levers I and J with the supporting-bar C and the adjustable fulcrum E, when arranged and operating substantially as and for the purpose described.

121,722.—Clothes-Drier.—George Augustus Keene, Lynn, Mass., assignor to himself and Martin C. Heald, same place.

Claim.—1. The arrangement of the clothes-frames *a a' a''*, hung upon cords *b*, and having spreaders *d'* and *d*, of which *d* is longer than *d'*, in combination with a suitable suspending attachment, substantially as described.

2. The arrangement of the drier, consisting of the clothes-frames *a a' a''* strung upon cords *b* and having spreaders *d d'*, with wall-sockets *h*, substantially as and for the purpose described.

121,723.—Mattress. — Jacob Maas, Westfield, Mass.

Claim.—In combination with the mattress A, the cord B and worked or eyelet-holes *b b*, the parts being arranged and constructed substantially as hereinbefore specified.

121,724. — Device for Locking Nuts.—John Maitland, Newburg, Ohio.

Claim.—The splice-plate or fish-bar F when constructed with a rib or flange, G, as described, and key H, all arranged in relation to the rails and bolts substantially as set forth, and for the purpose specified.

121,725.—Link.—Joseph H. McIntire, Crestline, Ohio.

Claim.—The link A A', supplied with the fastening consisting of the bolt *a*, upright projections a^1, and horizontal plate a^2, constructed and arranged to operate substantially as shown and described, and for the purpose set forth.

121,726.—Bedstead-Fastening.—William H. McPherson, Nashville, Tenn., assignor to James E. Stacy and Merrill G. Phillips, same place.

Claim.—As a bedstead-fastener, the combination of the hook A and slotted wedge B, both constructed, arranged, and used as specified.

121,727.—Machine for Pressing and Finishing Leather, Skins, &c.—Nathan D. Morey, Saratoga Springs, N. Y.

Claim.—1. The swinging board G and roller H, in combination with table B and roller F, as and for the purposes set forth.

2. The combination of swinging board G and table B with the stretching-rollers H F and pressing-rollers C D, as and for the purposes specified.

121,728. — Bed-Bottom. — Elias P. Read, Chicago, Ill.

Claim.—1. The clamp-piece C provided with an angular or curved groove, *c*, in combination with the bolt *b*, nut b^1, arm c^1, and spring A, substantially as shown and described.

2. The angular or curved projection *a* in the wire constituting the last coil of the spring A, in combination with the clamp-piece C constructed as described, and for the purpose set forth.

3. Providing a clamp-piece for securing a bed-spring with an arm c^1, for the object described.

121,729. — Bed-Bottom. — Elias P. Read, Chicago, Ill.

Claim.—1. A clamp-piece, C, provided with a straight, curved, or angular groove, *c*, in combination with a bolt, *b*, and nut b^1, for the purpose specified.

2. The connecting-cord D, formed into a loop, *d*, in passing each slat, which loop is inserted, through a hole, b^2, in the slat, and is prevented from being again withdrawn from said hole by bringing the cord around the slats and passing it through each loop in succession, in the manner shown and described.

121,730, antedated December 2, 1871. — Striking Mechanism of Clocks.—Carlton W. Roberts, Chicago, Ill.

Claim.—1. The wheel E of the striking movement, arranged to revolve intermittently once each hour, and provided with quarter pins *e*, in combination with the bell-hammer H', substantially as and for the purpose specified.

2. The combination of the stop-bar L, wheel J, and lever A, substantially as and for the purpose specified.

3. The combination of the quarter-striking wheel E, four-leaved cam F, and lever A, furnished with the arc B and pin *b*, arranged to strike the hour at each quarter, substantially as specified.

121,731, antedated December 9, 1871.—Cattle-Pump. — Giles Bolivar Roe, Ogle county, Ill.

Claim.—1. The platforms B and D, so arranged that the dead-weights I and the weight of the animal, or a moving weight, may be combined to elevate water, substantially as described.

2. The dead-weights I, combined, with a suitable water-elevator in such a manner that their weight may be used for raising water, substantially as set forth.

3. The drums L, pipes K, platforms B and D, water-troughs O and T, and pipes P, when all are combined to form a cattle-pump, as specified.

121,732.—Railway Rail. — Rufus S. Sanborn, Rockford, Ill.

Claim.—An elastic railroad rail provided with a separate elastic base united to the body of the rail in the manner specified, and for the purpose set forth.

121,733.—Stove-Grate.—Watson Sanford, Brooklyn, N. Y.

Claim.—1. The conical or tapering center-piece, together with an outer and a central ring, when all are constructed and arranged so that the center piece and middle ring slope and form a continuous declination in an opposite direction to the outer ring, substantially as described.

2. The angled or saw-edge grate-surface when the serrations run in opposite directions a short distance alternately, substantially as described.

3. The socket *g*, constructed and arranged with the upper side nearly uncovered so as to enable the holder to be more readily released therefrom in the act of dumping, substantially as described.

121,734. — Bedstead. — Samuel Springer, Chicago, Ill.

Claim.—The combination, in a bedstead, of the elongated tenons, keys E, recess *a*, rod *b*, and canvas D, substantially as and for the purposes specified.

121,735, antedated November 22, 1871.—Joint for Folding Furniture. — Nathan Thompson, Brooklyn, N. Y.

Claim.—The hinge-joint for folding furniture and other articles, constructed of halves or portions A B provided with arms or projections *a b* for attaching them to the surfaces the joint is designed to be applied to, and arranged to work, the one upon and within the other, by means of the circular flange *d*, the boss *e*, and the recesses *f* and *g*, in combination with the pivot *c*, substantially as shown and described.

121,736, antedated December 1, 1871. — Mold for Casting.—Nathan Thompson, Brooklyn, N. Y.

Claim.—A female die or matrix, divided at its sides and bottom or one end in directions or planes at right angles to each other or thereabout, substantially as specified.

121,737.—Ditching-Machine.—John Valentine, Buffalo, N. Y.

Claim.—1. An adjustable mouth-piece, combined with the fixed discharge-spout of a ditching-machine in such a manner as to allow the inclination of the mouth-piece to be changed as the ditching progresses, substantially as and for the purpose set forth.

2. The combination of the mouth-piece H' and spout H of a ditching-machine with the bolts and slots A^1 A^2, or equivalent device, by which the former is secured to the spout and rendered longitudinally adjustable, substantially as hereinbefore set forth.

3. The vertical ways B of a ditching-machine, provided with ribs *i*, in combination with the sliding gate C provided with lips or projections *k*, substantially as and for the purpose hereinbefore set forth.

121,738.—PROPULSION OF VESSELS. — Edward Whitehead, Cincinnati, Ohio.

Claim.—In combination with the hull A, constructed with a divided channel, B D E, the rollers G H, band or chains J J, and swinging-paddles I, when the parts are constructed and operate substantially in the manner and for the purpose specified.

121,739. — THRASHING-MACHINE. — Robert S. Williams, Norristown, Pa.

Claim.—The combination of the shaft D, springs E, and beaters H, when the middle parts of the springs are rigidly connected with the shaft and the ends of the former have a like connection with the inner ends of the beaters, substantially in the manner and for the purpose set forth.

121,740.—HORSE-POWER.—Aaron Wissler, Brunersville, and Jacob Gamber, Petersburg, Pa.

Claim.—1. The shouldered sliding segment or segments T T', which carry the box or boxes I' for the upper shaft K with its belt-wheel M and pinion L, arranged and operating substantially in the manner specified.

2. The concentric circles J R with their projecting base *j r*, in combination with the sliding segments T T', bolts *t w*, and cross-bars or spider O having slotted adjustable ends, jointly arranged and operating in the manner and for the purpose substantially as shown and mentioned.

3. The combined crown-wheel P and pinion G, in combination with the vertical shaft S, mounted in the manner shown, so as to be operated by the driving-wheel H and impart motion to the adjustable pinion L at any point of the circle, all arranged substantially in the manner and for the purpose described.

121,741. — HEATING-STOVE.—Henry Zahn, Philadelphia, Pa.

Claim.—1. The apertures P P, arranged one above the other, and operating as described.

2. The arrangement of the radiator immediately above the throat of the furnace.

3. The combination, operating as described, of the boilers F, steam-pipes H, conduits J opening below the throat of the furnace, and apertures P P above the said throat.

4. The dome-shaped conduits J, opening below and near the throat of the furnace and communicating with the external atmosphere, as shown and described.

5. The pan T, so arranged as to throw one or more jets of steam into the furnace above the throat.

121,742.—SPRING PERCH FOR BIRD-CAGES. Edward Aldom, New York, N. Y.

Claim.—1. The perch A and spring B combined with a bird-cage, substantially as specified.

2. The plate D, provided with hooks *e e* and fingers *f f*, in combination with the perch A and spring B, as and for the purpose specified.

121,743.—BOLT AND NUT-THREADING MACHINE.—Frank S. Allen and Charles F. Ritchel, New York, N. Y.

Claim.—1. The multiple crank-shafts A B, plates E E, wrist-gears G H, pinions M M, and driving-shaft L, combined, as described, for the purpose of operating the two sets of bolt or nut-threaders S T alternately, as described.

2. The transversely-sliding and multiple blank-holders U W, containing receptacles for two or more feeds, arranged and applied in a bolt and nut-threader, as and for the purpose set forth.

3. In bolt and nut-threaders, a sliding blank-holder, open at the rear to receive the blanks, and combined with a guide-frame, R, recessed sufficiently to receive each tool, but forming a rigid back for the blank, as described.

4. A cutter-head, X, having socket Y at the rear, clearing slots Z in the middle, and cutting-dies Z' in front, all constructed and arranged as set forth.

121,744.—OILING APPARATUS FOR CRANK-PINS.—John F. Allen, Mott Haven, N. Y.

Claim.—1. The arrangement of the radiating-plate E on the back of the crank, and connected through suitable channel-ways *m n*, with the surface of the crank-pin to be oiled.

2. The above-described radiating-plate E, in combination with an oil-cup attached to a stationary part of the engine, and provided with a projecting nozzle, *w*, or its equivalent, constructed and operating substantially as and for the purpose hereinbefore set forth.

121,745.—MOTIVE-POWER FOR SEWING-MACHINES. — Harvey S. Barnes, Augusta, Wis.

Claim.—1. The combination of the spiral springs F F', shafts E E', gears H H', pinions O O', winding-shaft M, and clutch P, when arranged and operating in such a manner that either spring may be wound independently of the other, as described.

2. The arrangement of the gears H H', idler-wheels I I', pinions K K', spring tappets L L', train S S' T U V W X, wheels *a b c d*, shaft *f*, and lever *p*, when operating together, as and for the purposes described.

121,746. — APPARATUS FOR DRYING SAND AND GRAVEL.—Allen H. Bauman, Mapleton, Pa.

Claim.—The apparatus herein described for drying gravel or sand, consisting of the fire-chamber, flues, heating-pipes, and case, all constructed and arranged substantially as set forth.

121,747. — KNIFE-CLEANER. — William S. Beebe, Joseph T. Baynes, and Abraham A. King, West Troy, N. Y.

Claim.—1. The combination of the polishing-rollers A and B and holding apparatus therefor, adapted to hold them, in such manner that the article will be polished on one side when forced in between them and on the other side when pulled out, all substantially as specified.

2. The combination, with rollers A and B, of the powder-holding trough I, substantially as specified.

121,748.—APPARATUS FOR WARMING BUILDINGS WITH STEAM.—James H. Blessing, Albany, N. Y., assignor to himself and Frederick Townsend, same place.

Claim.—1. The tripping-lever *g* and segment *f* applied on the stem of valve-lever W, in combination with the gravitating-rod *e'*, the slotted rod F, and the diaphragm-rod P, substantially as described.

2. The segment *f* fixed to the stem *e* and notched at *f'* to receive one arm of an angular lever, *g*, which is applied loosely on said stem *e*, substantially as and for the purposes described.

3. The combination of a check-valve with the exhaust-valve passage of the valve-box D, substantially as and for the purposes described.

4. The valve-lever W and its stem *e*, in combination with inlet and outlet valves *n n'* in valve-box D, a tripping device, and a vertically-movable diaphragm-rod, P, all substantially as described.

5. The passages b b^3 constructed in the section A' of the diaphragm-case, substantially as and for the purposes described.

6. The inlet and outlet check-valves b^1 b^2, in combination with the chamber L' of the diaphragm-case A A', substantially as described.

121,749.—PROPULSION OF CANAL-BOATS.—Thomas James Burke, Virginia, Ill.

Claim.—The propelling apparatus for a canal-boat, formed of the chains M M provided with projections, and the rollers N N, in combination with the endless chains and buckets E, all arranged in connection with the boat, as specified.

121,750.—AUTOMATIC FLY-BRUSH.—Hiram C. Chandler, Peru, Ind.

Claim.—The combination, with the plates A A, of the wheel C operated by the spring D therewith connected, and the wheel F, the connecting-rod G, crank E, shaker H, and shaft I, to which the brushes are attached, all constructed and operated substantially as described and shown.

121,751. — REFRIGERATOR. — Andrew J. Chase, Boston, Mass.

Claim.—The metallic ice-trough B C D, having its sides B C C D at right angles to each, and inclined as shown, so located within the chamber as to allow of a free circulation of air about it, substantially as described, and for the purpose set forth.

121,752, antedated November 25, 1871.—FENCE.—John Wesley Cherry, Carthage, Ill., assignor to himself, Jesse B. Quinby, and Thomas Logan.

Claim.—The fence, as formed, with the parts A B, C D, E F, and parts G H with their center portions enlarged to act as pivots, all substantially as specified and shown in Figs. 2 or 3.

121,753. — WASHING-MACHINE.—James F. Chesebro, Trenton, N. J.

Claim.—1. The combination of spring-binder S and spring pivot *i k* with the gear C J, as and for the purpose described.

2. The spider L of a washing-machine, provided, as described, with grooved arms P, set at different distances from the center of motion, for the purpose set forth.

3. The corrugated and perforated lining, combined with strips T attached to the box, to form a chamber, *a*, above said strips, open at the top, and through which the water is caused to pass, as and for the purpose described.

4. The combination, with the hinged cover having pieces U U, of a pair of slotted and sliding braces V V, arranged as and for the purpose described.

121,754. — DRAUGHT-COCK. — William P. Clark, Medford, Mass.

Claim.—1. In combination with the valve-spindle *e*, the adjustable valve-ring *x*, operated substantially as described.

2. The valve-stem or spindle *e*, sleeve *z*, ring *x*, and spring b^3, combined and arranged substantially as shown and described.

3. The inlet-passage *h*, outlet-passages *j*, outlet-passages *q* having their upper orifices in one plane, covered by the single flexible valve *t*, substantially as shown and described.

4. In combination with the flexible valve *t*, valve-spindle *e*, and valve-ring *x*, the cylinder or ring *v* extending from the valve to the screw-cap *d*, and forced by the screw-cap against the valve to pack it, substantially as shown and described.

5. In combination with the valve-ring *x*, the openings in the cylinder or ring *v* and in the faucet, to make the ring accessible to hand, substantially as described.

6. The removable outlet-tube *u*, formed as a tapering plug, to be slipped into the spreader *o*, substantially as shown and described.

121,755.—CHURN.—John Cochran, Jr., Auburn, Mo.

Claim.—The combination of the bevel-gear C and clutch-gears *c c*, sliding toothed sleeve F, spring-catch *f'*, dasher-rods D D', and dashers E and E^1, as shown and described, whereby said dashers may be set parallel and revolved together or at right angles to each other, as specified.

121,756.—DEVICE FOR MAKING BALE-TIES. Marion N. Coe, Madison Parish, La.

Claim.—The combination of the handle B, hinged arm F, stock G for holding the type-block, spring A, and the beveled and dart-shaped tongue C, all constructed and arranged to operate substantially as described.

121,757. — SHOE-FASTENING. — Frederick Coeller, New Haven, Conn.

Claim.—The herein-described shoe-fastening, consisting of the lever or levers C, one end of which is pivoted to one part of the shoe, passing through or in connection with the securing device *f* on the other part, its other end locked or secured to the same part of the shoe to which the first end is pivoted, substantially in the manner described.

121,758.—BASKET.—Elisha B. Cole, Huntington, Mass.

Claim.—The basket A, constructed of woven splits of wood, and re-enforced by the metallic corners B, securely riveted to the same, substantially as shown and described.

121,759.—PISTON FOR PRINTING-PRESSES.—Calvert B. Cottrell, Westerly, R. I.

Claim.—1. A flexible packing, D D', clamped between disks and expanded by a flat spring, G, coiled around the disk F, as described, for the purpose set forth.

2. The flexible packing D D', the flat spring G, the spring-pins L, and the auxiliary springs H, all combined and applied together as and for the purpose set forth.

121,760.—REST FOR CLOTH-SHEARING MACHINES. — Michael Craven, Dedham, Mass.

Claim.—1. The roll A and brush C, combined in a cloth-shearing machine, as and for the purpose described.

2. The combination, with roller A, of the frame *a b* B, provided with tongue *d*, as and for the purpose set forth.

121,761.—COVERING FOR WHIPS.—Velenus W. Crowson, Westfield, Mass.

Claim.—A whip-stock covered by strips of raw gutta-percha, substantially in the manner specified.

121,762.—BLAST-FURNACE.—Henry Davies, Newport, Ky.

Claim.—1. The series of pendent and movable chambers D, perforated near the bottom, combined in a blast-furnace, with and resting upon the sides of an inverted conical hopper, B, as described, so that heat can be first applied to said chambers to raise the temperature of the ore therein, the products of combustion then be passed through said ore, and the said chambers then lifted to drop the ore into the furnace.

2. In a blast-furnace the series of fire-places Q, the flues P R, and the chamber E, arranged and applied to the chambers D, as and for the purpose set forth.

3. The steam-lifting device, arranged upon circular track X, and provided with a detachable and pendent catch to connect and disconnect with chambers D, as described.

4. The central fuel-inlet J, provided with a pen-

dent and downwardly-movable cone K, to be let down to open said inlet to fuel for the furnace, and to be raised to close said inlet.

3. The process of first heating ore and then passing the products of combustion therethrough, as and for the purpose specified.

121,763 — TINMEN'S-TONGS. — Samuel T. Dickinson, Jr., Belvidere, N. J., assignor to himself and Ezra De Witt, same place.

Claim.—1. The jaws A B, chamfered to form a hollow space, F, and slotted at H, combined as described, with a gauge, G, having lug I and guide-arms L L adjustable in said inner space F, as described, and for the purpose specified.

2. The combination, with said slotted jaws A B—of which one is grooved on the side-edges—and said gauges G L L L, of the set-screws K K, applied as and for the purpose set forth.

3. The lug I and index-pin J, arranged substantially as and for the purposes described.

121,764.—SCREEN FOR COAL-GAS PURIFIERS.—Edward Duffee, Haverhill, Mass.

Claim.—In a screen for dry coal-gas purifiers, composed of crossed or interlaced thin strips of wood reeved through and supported by a wooden frame, as shown and described, forming the bars A and C with projecting abutments, and the bars B D with extensions, as and for the purpose set forth.

121,765. — STAMP-CANCELER. — Daniel E. Eaton, Boston, Mass.

Claim.—The device for canceling postage and other stamps, constructed and operated substantially as described.

121,766.—TOOL-HOLDER FOR GRINDERS.—Edward F. Edgecomb, Mechanic's Falls, Me.

Claim.—The improved tool-holder for grindstones, consisting of the stand A, cross-bar B, bearings C, holder I, oscillating beam E, arm F, adjusting-screw and binding-screw L, the holder I being pivoted to the oscillating beam, and all combined and arranged and adapted for application to a grindstone, substantially as specified.

121,767.—BAGATELLE GAME AND APPARATUS. — William Evers, San Francisco, Cal.

Claim.—In combination with the table A, having a sheet-metal top, the triangular corner-boxes F, having the notched counting-blocks *g*, arranged to be operated by the horizontal push-pin *j*, and spinning-top K with its rubber-band *l*, substantially as and for the purpose specified.

121,768.—KEY-BOARD FOR REED AND PIPE ORGANS.—Carl Fogelberg, Boston, Mass.

Claim.—The series of reed-organ pipes or pipe-passages *g*, formed by the walls or boards *b c* and the cross-partitions *f*, and covered or controlled by the valve *e*, substantially as shown and described.

121,769.—COMBINED LATCH AND LOCK.—Vitruvius Frazee, San Francisco, Cal., assignor to himself and William L. Boyer, same place.

Claim.—1. The tumblers *a* and *c* provided with the curves *x* and *x'*, in combination with the pin *p* and lever *d* or *d'*, substantially as and for the purpose hereinbefore set forth.

2. The slide *e* and lever *d* pivoted thereto, in combination with the tumblers *a* and *c* and curves *x* and *x'*, substantially as and for the purpose hereinbefore set forth.

3. The lever *d* and tumblers *a* and *c*, in combination with the slide *e*, bolt R, and curved portions *t t* of the key, substantially as and for the purpose hereinbefore set forth.

121,770. — CULINARY BOILER. — Bridget French, Rochester, N. Y.

Claim.—The boiler, constructed with the square body A and cylindrical bottom B, said body being provided with the sliding lid C and pitcher-spout G, in the manner and for the purpose specified.

121,771.—HYDRANT. — Jacob Fricker, Cincinnati, Ohio, assignor to himself and Americus Warden.

Claim.—1. In combination with the shoe C of the stock formed with main valve-seat *c'*, guides *c''*, and waste-outlet *c'''*, constructed substantially as described, the valve D, when formed with wings *d'''*, and fitted with vent-valve E, operating substantially as and for the purpose specified.

2. In combination with the elements of the preceding clause the prolonged vent-valve E, adapted in the manner described, to close the vent *c'''*, whether the valve *d* be open or closed.

121,772.—WAGON-BRAKE.—John A. Gerhart, Easton, Pa.

Claim.—The lever H having its shorter arm connected with the brake-bar by rod G and its longer arm with the opposite end thereof by the rod I and lever J, to which the operating rod or cord K is attached, all constructed, arranged, and operating as shown and described.

121,773.—MACHINE FOR SAWING STONE.—Henry S. Gillette, New Preston, Conn.

Claim.—In combination with the crank-shafts T U and gears A' A', the adjustable slotted bearings V, bearings W, and standards X provided with slotted flanges Y, all arranged as herein shown and described, for the purpose specified.

121,774.—LIFTING-JACK. — Alfred E. Goddard, Essex, Conn.

Claim.—In a lifting-jack for vehicles, the combination of the lifting mechanism, either with or without an adjustable bracket, as described, and for the purposes set forth.

121,775.—CORDING ATTACHMENT FOR SEWING-MACHINES.—Harry C. Goodrich, Chicago, Ill., assignor to Nelson Barnum, same place.

Claim.—In a cording attachment for sewing-machines the part B, consisting of a piece of elastic sheet metal folded its entire length and fastened at its rear end to the end of the arm A, the upper and lower sides *a* and *b* of the fold forming an open channel or groove along the whole length of the same and the lower side *b* terminating in a curved lip, *c*, all as herein described, and for the purpose set forth.

121,776.—ENDLESS ROPE-WAY.—Andrew S. Hallidie, San Francisco, Cal.

Claim.—1. The combination of the herein-described pulley A with the herein-described pulley B, substantially as and for the purposes hereinbefore set forth.

2. The arrangement in an endless rope-way, as herein described, of the pulleys I^1 or I^1 I^2 in a vertical plane passing through the approaching part of the rope, substantially as and for the purposes herein set forth.

3. The combination of the pulleys I with the swinging or adjustable bracket K, substantially as herein described, and for the purposes herein set forth.

121,777.—HAY-LOADER.—Henry W. Hamilton, Brandon, Vt.

Claim.—1. The arms or frame H, provided with pulleys I, in combination with the two parts G F of the elevator-frame and with the elevator P Q R, substantially as herein shown and described, and for the purpose set forth.

2. The elevator-frame, made in two parts, F G, and pivoted to the axle C at their adjacent ends to enable the lower end of the elevator to adjust itself to the surface of the ground, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the short-frame G, supported upon shoe S, with the arms M, teeth J, spring N, frame H, elevator P Q R, and frame D, as shown and described.

121,778.—KEY-BOARD FOR MUSICAL INSTRUMENT. — Emmons Hamlin, Winchester, assignor to Mason & Hamlin Organ Company, Boston, Mass.

Claim.—The two parallel sets of reed-valves *f h*, connected (so as to be simultaneously operated by one set of keys) by means of rocker-rods or shafts *s*, each having arms *r v*, the arm *v* being depressed by the key, and the arm *r* pressing down the pin or stem *o* and opening the valve *h*, substantially as described.

121,779. — LUBRICATOR FOR STEAM-ENGINES. — James Harper, New Haven, Conn.

Claim.—In combination with the chamber A and passage T with its valve, the chamber L connecting with the said chamber A, and provided with a single opening, P, to allow the steam to enter and return by the same passage, substantially as set forth.

120,780.—PAPER-PULP ENGINE.—Jonathan Hatch, South Windham, Conn., assignor to Smith, Winchester & Co., same place.

Claim.—1. The male grinder as constructed with the dovetailed grooved metallic ribs *c* to receive the knives *d*, and with the wooden bars *e* driven between and against the knives and notched upon the ribs *c*, all being substantially as specified and represented.

2. The female grinder as constructed with the internal and longitudinal ribs *g*, and as provided with the knives *h* and the wooden voussoirs or arch-bars *i* arranged and held between and by such ribs by one or more keys, *k*, all being substantially as explained and represented.

3. The female grinder as provided with one or more intercepting-chambers or pockets, D, arranged with it, essentially as and for the purpose described, and the combination of such pocket or pockets with the male and female grinders, arranged as described or shown.

121,781.—BELT-FASTENING.—John W. Hicks, Laurel, Md.

Claim. — The above-described clamp or clasp, consisting of two plates, A A', provided with the oblique catches B, the teeth C C', and the slots D, substantially as set forth.

121,782. — TIME-LOCK. — Stephen William Hollen, Cincinnati, Ohio.

Claim.—1. The combination of the lock A and clock D with the disk F, provided with notch *d*, lever G, dog C, and spring *a*, when constructed and arranged substantially as and for the purpose set forth.

2. In combination with the above, the rock-shaft H and spring *e*, when constructed and arranged substantially as and for the purpose set forth.

121,783. — MINER'S SQUIB.—John Holmes, St. Clair, Pa.

Claim.—As a new and improved article of manufacture the squib A, substantially as and for the purposes described.

121,784. — HARVESTER. — Harvey L. Hopkins, Eaton, N. Y.

Claim.—1. The combination of the frame, hinged tongue, cranked shaft B C D, and link E, substantially as and for the purpose set forth.

2. The combination of the cutting apparatus, swiveling-bolt I, lever H, brace M, intermediate lever P and cam-lever O, all arranged and operating substantially as set forth.

121,785.—SASH-HOLDER.—Thomas R. Hubbard and William L. Hubbard, Brooklyn, N. Y.

Claim.—As an improved article of manufacture the device herein described, consisting of the screw-plate A, diagonal-slotted ball-socket or cylinder B, closed at its upper end and open at its lower end, as and for the purpose specified.

121,786.—TRUNK LID-SUPPORT.—George H. Johnson and Fred. Bottner, Bridgeport, Conn.

Claim.—The peculiar construction and arrangement of the grooved and offsetted plate D, and hinged rod C, as and for the purpose specified.

121,787. — MANUFACTURE OF SOAP.—William Johnson, New York, N. Y.

Claim.—As an improved article of manufacture, the soap made of the ingredients and in the manner herein described.

121,788. — MATCH-BOX. — Albert D. Judd, New Haven, Conn.

Claim. — The herein-described match-box, consisting of the divided base A' B', secured to the base-plate C by a tenon of dovetail form on one or both of the said parts, combined with a key or wedge, *d*, in the manner substantially as described.

121,789. — PITMAN-CONNECTION. — Amos Ketchum, Estherville, Iowa.

Claim.—A crank-pitman, provided with prongs and pointed screws D' B' at one end, and bolt E *b* and tube D at the other, combined, as described, with sickle-bar C and crank-wheel A, all being constructed and arranged so as to operate in the manner set forth.

121,790.—CHIME FOR REED AND PIPE ORGANS, &c.—Carl Lehnert, Boston, Mass.

Claim.—A metal chime for pipe and reed organs and other instruments, flanged at the edges, substantially as specified.

121,791. — TRANSPARENT CORNUCOPIAS.—William Lohse, New York, N. Y.

Claim.—1. As a new article of manufacture, a cornet or cornucopia made of transparent gelatine, as set forth.

2. The transparent gelatine cornucopia or cornet provided with the paper-tips *b* and upper lining *c*, substantially as specified.

121,792.—SHIPPER-SADDLE.—Llewellyn D. Lothrop, Dover, N. H.

Claim. — 1. The improved shipper-saddle, constructed substantially as described, for use as set forth, viz: as composed of the two separate parts, *a a*, the joint pieces *f f*, the ears *c c*, connecting-screw *b*, pivot *g*, and oil-passage *h*, all being arranged essentially as shown and explained.

2. The improved shipper-saddle, arranged in the groove and to encompass the neck, provided with the oiling-passage *i* arranged in such groove, substantially as described.

121,793.—ROTARY PUMP OR WATER-ELEVATOR.—Thomas J. Lovegrove, Philadelphia, Pa., assignor of one-half his right to Henry S. Lansing, same place.

Claim.—A water-elevator, consisting of a cylindrical vessel having an internal spiral web and a central rotating shaft provided with vanes, and operating substantially as described.

121,794.—CULTIVATOR.—James Mallon and Henry Von Phul, Jr., Holly Wood, La.

Claim.—The combination of the slotted plates H O, clutch *y*, flange K, and standard of shovel G, as set forth.

121,795.—FRUIT-DRIER.—Charlie H. Martin, Chapinville, N. Y.

Claim.—The combination of a caloric-engine with a fruit-drier or evaporator in such manner that the former will exhaust into the latter, as specified.

121,796.—PORTABLE FIRE-ESCAPE.—George D. McCullen, New Orleans, La.

Claim.—The car or chair F, wheels H L M, axles G J K, flexible or jointed connections I, bails or chains N O, and rope or chain P, constructed substantially as herein shown and described and arranged to operate in connection with the rollers C D E of the box A B, as and for the purposes set forth.

121,797.—FENCE.—Ross B. Meeker, Sandford's Corners, N. Y.

Claim.—1. The base-pieces E E, frame A B C D, vertical bars F, and poles G, constructed and combined as and for the purpose set forth.

2. The combination of the inclined blocks or braces D with the posts A B C, substantially as herein shown and described, and for the purpose set forth.

121,798. — SEPARATING METALS FROM A MIXTURE OF METALLIC AND ALKALINE SULPHATES.—Alfred Monnier, Philadelphia, Pa.

Claim.—The treatment of mixed metallic and alkaline sulphates for the purpose of separating them, substantially as described.

121,799.—TREATING METALLIC AND ALKALINE SULPHATES TO SEPARATE COPPER, &c.—Alfred Monnier, Philadelphia, Pa.

Claim.—The treatment of mixed metallic and alkaline sulphates for the purpose of separating them, substantially as described.

121,800.—PAPER-CALENDERING MACHINE.—Stephen Moore, Sudbury, Mass., assignor to himself and Thomas Rogers, same place.

Claim.—1. In combination with the calender-rolls or cylinders *c d*, the presser and gauge-bar *f*, automatically held above the roll *d* by a spring or springs and forced down to the surface thereof by the treadle, substantially as shown and described.

2. In combination with the rolls *c d*, the guide-fingers arranged to conduct the edge of the calendered sheet to or toward the front of the machine, substantially as shown and described.

121,801.—PAINTER'S TRESTLE.—David Moritz, Carmansville, in the city of New York, N. Y.

Claim.—The combination of the forked catch *i* and lever *j* with the shaft F and arms *g*, substantially as set forth.

121,802.—PLATE FOR ARTIFICIAL TEETH.—George Morrison, Palmyra, Wis.

Claim.—The movable pivoted cap, lying within a circular recess in the top of the plate, substantially as described.

121,803.—DIE FOR MAKING CARRIAGE-STEPS.—Francis B. Morse, Plantsville, Conn., assignor to H. D. Smith & Co., same place.

Claim.—The dies B C, constructed in the manner described for forging coach or platform steps.

121,804. — JOURNAL-BEARING. — Eliza D. Murfey, New York, N. Y.

Claim.—1. A journal-bearing consisting of a strip of paper or its equivalent wound spirally and impregnated, as set forth.

2. A bearing of impregnated paper or its equivalent, having an internal groove, *e*, for the purpose specified.

3. A bearing of paper or its equivalent, having internal depressions or recesses, as and for the purpose set forth.

4. The combination, with the said perforated bearing, of an outer covering of paper or its equivalent.

121,805. — MATERIAL FOR PACKINGS AND BEARINGS.—Eliza D. Murfey, New York, N. Y.

Claim.—As an improved article of manufacture, a packing and bearing material consisting of sheets of paper and canvas or its equivalent, impregnated, and combined as set forth.

121,806.—PACKING OR BEARING FOR JOURNALS, &c.—Eliza D. Murfey, New York, N. Y.

Claim.—A packing or bearing consisting of wire or thin metal strips covered with impregnated paper or equivalent material, and formed into sheets, rings, or ropes, either with or without other materials, as specified.

121,807. — DIE FOR MAKING BLANKS FOR STOVE-PIPE ELBOWS. — Edwin Norton, Chicago, Ill.

Claim.—The dies, Figs. 1, 2, and 3, having the curved cutting-faces, as described, and when used for cutting the blanks of metal C, D, and E, for forming curved elbows for stove-pipes and other purposes.

121,808.—METALLIC CARTRIDGE. — Alwin Payne, Bridgeport, Conn.

Claim.—1. A cartridge-case wherein the head thereof is re-enforced by metal cut and punched or driven down from the wall of said case, substantially as described.

2. A cartridge-case in which the anvil is formed and the base thereof re-enforced by the metal driven down, substantially as above described.

121,809.—SEEDER.—Thomas L. Peirce and George Peirce, New Providence, (Union Post-Office,) Iowa.

Claim.—In seeders, the oval-shaped buttons E pivoted on cut-away ends of the conducting-spouts B, as described, to admit of scattering the seed to a greater or less extent, as set forth.

121,810.—PENDENT READING-DESK.—George F. Perkins, San Francisco, Cal.

Claim.—In a pendent reading or writing desk, the upright P′ fastened to a chair or bedstead by means of the strap S and handle H, in combination with the socket Q, curved pendent pieces P, and reading-desk D, substantially as and for the purpose hereinbefore set forth.

121,811.—BRUSH.—George Pirrung and Felix Pirrung, Chicago, Ill.

Claim.—The improved brush, formed of the head A, bent handle C, brush H, cleat or piece D, wires F, and end clasps E, all constructed and arranged as shown and described.

121,812.—WASH-BOILER.—John W. Plouff, Gloucester, Mass., assignor to Israel C. Mayo, same place.

Claim.—1. The combination and arrangement of the horn B, the teat C, and their base-plate D, all being for application to a boiler, as and for the purpose set forth.

2. As an improved manufacture and of my invention, a boiler or vessel, A, provided or combined with a horn, B, and teat C, as described, arranged together and with it, as and for the object or purposes as specified and represented.

121,813, antedated December 9, 1871. — OIL-CAN.—Fredric W. Read, Marquette, Mich.

Claim.—The ball or float E, rod D d^1 d^2, and frame C, in combination with the body and nozzle of an ordinary oil-can, substantially as herein shown and described, and for the purpose set forth.

121,814, antedated November 25, 1871.—WASHING-MACHINE. — Oliver J. Rider and John C. Bryant, Wellington, Mo.

Claim.—1. The combination of the hollow slatted beater D, with concave surfaces, and the slatted convex boards B B, when constructed and arranged to operate substantially as described.

2. The combination of the dowel-pins *b* and gum-elastic springs C with the boards B B, as and for the purposes described.

3. The combination of the hollow beater D, the convex boards B B, springs C, lever F, and connecting-rod G, all constructed and arranged to operate as and for the purpose set forth.

121,815. — COTTON-PLANTER. — Henry A. Ridley, Jacksonport, Ark.

Claim.—In cotton-planters, a bottomless hopper, C, provided with notches on the lower edge of rear side, combined, as described, with a revolving cylinder, D, serving as bottom of hopper, and provided with spirally-arranged pins d^2 to produce an unbroken and continuous delivery of seed into the spout.

121,816.—CLAMP FOR HOLDING TIMBER.—Peter Scholl, Cashtown, Pa.

Claim.—The combination of the post A and bolt C with the link D and lever E, the links serving as a jaw for holding the timber against the post, as specified.

121,817.—SULKY.—Thomas S. Seabury, St. James, N. Y.

Claim.—A sulky, constructed throughout substantially as described and shown.

121,818. — RIDING-SADDLE. — Francis M. Simpson, Pittsville, Mo.

Claim.—The bars E F and bow D attached to and arranged with the springs B B connected with the saddle-tree A A, as shown and described, whereby said parts are adapted to operate as specified.

121,819.—GRINDING-MILL.—John B. Smith, Bowensburg, Ill.

Claim.—1. The spindle A, with the hollow portion I′ and orifices N N, arranged substantially as described.

2. The hand-wheel J, sleeve-screw K, hopper H, and yoke L, arranged as described, whereby said hopper may be adjusted vertically.

3. The spindle A, constructed as described, in combination with the hopper H and tube or neck I, substantially as specified.

4. The nut *q*, in combination with the hollow spindle A, as shown.

5. The combination of the bed-stone B, runner C, and spindle A, when provided with the hollow portion I′ and orifices N, substantially as and for the purposes set forth.

121,820.—STONE-PULLER.—George Sprinkel, North Leverett, Mass.

Claim.—The combination of the sliding tongue C with the draft-chain E, elbow-lever G, and lifting-chain H, all arranged to operate substantially as herein shown and described.

121,821. — CORE-RETAINER FOR TUBULAR ROCK-DRILLS. — Charles J. Stevenson, Hazel Green, Wis., assignor to himself and Martin H. Duckworth, New York city.

Claim.—The spring-jaws applied within a tubular rock-drill, substantially as and for the purposes herein shown and described.

121,822. — ELEVATOR.—Henry S. Stewart, Yreka, Cal.

Claim.—The endless chains F, formed by the combination of the links f^1, links f^2, and bolts f^3, made with a solid round head at one end and a solid cross-head at the other end, substantially as herein shown and described, and for the purpose set forth.

121,823.—CAR-COUPLING.—Joseph B. Tracy, Lincoln, Del.

Claim.—1. The lever E and slide D, in combination with the jaws and bumpers, constructed and arranged substantially as and for the purpose herein set forth.

2. The arrangement of the bumpers B B′, having pieces *b b′*, springs *c*, and pieces C, the pivoted jaws A A′, the slide D, and lever E, when all these parts are constructed and operated substantially as and for the purpose set forth.

121,824. — RAILWAY SWITCH.—Edward A. Trapp, San Francisco, Cal.

Claim.—1. The shaft A with its pulleys *d* and arms *f*, in combination with the operating levers G, substantially as and for the purposes above described.

2. The inclined levers G, consisting of a long and a short arm at right angles with each other, substantially as and for the purpose above described.

3. In combination with the levers G provided with pins *i*, the box *j*, constructed in the manner and for the purpose specified.

121,825. — BRICK-MACHINE.—John Treadway, Haverstraw, N. Y.

Claim.—1. The arm J and bar K provided with notches L, in combination with connecting-rod M, pin N, slotted plates P P, and shifting-bar O, substantialy as and for the purposes set forth.

2. The joint-box *d*, in combination with the guide-rod *c* and presser-plate X, substantially as and for the purposes described.

3. The cam R′, rack S′, sector-wheel T, pulley P′, and pin U, arranged to operate substantially as and for the purposes described.

121,826.—FIRE-ESCAPE.—James J. Treanor, New York, N. Y.

Claim.—1. The door C, provided with the ladder *e*, reel D, braces *b*, and guide *d*, when said door is so hinged to the interior of the wall as to be capable of being turned over on the window-sill to form a platform, in the manner and for the purpose herein shown and described.

2. The links *a a* of the hinges, securing the door to the wall, said links being curved so as to form braces for securing the door to the sill when in use, substantially as shown and described.

3. The combination of the door C, ladder *e*, reel D, links *a*, and hinges and braces *b*, arranged as shown and described.

121,827.—APPARATUS FOR AMALGAMATING ORES.—John Tunbridge, Newark, N. J.

Claim.—A mercury-chamber, A *f*, and an ore-supply pipe, B, connected with a forcing machine of some kind, combined with a vessel, C, provided

with a series of screens covered with amalgam balls, as and for the purpose described.

121,828.—TABLE AND TREADLE FOR SEWING-MACHINES. — Simon W. Wardwell, Jr., St. Louis, Mo., assignor of one-half his right to George W. Shaw, same place.

Claim.—1. The gears *h e k*, radial arms *m m'*, and rings *o o'*, with the springs *w w'*, in combination with a crank-shaft, substantially as shown and specified.

2. The combination of the gears *h e k*, radial arms *m m'*, springs *w w'*, rings *o o'*, crank-shaft D with its ball *b*, pitman C, treadles B, plate G, and rings *t u*, all constructed and arranged substantially as and for the purpose shown and specified.

3. The combination of a sewing-machine table and cover P formed of leaves *p p'*, &c., when constructed and operating substantially as shown and specified.

4. The combination of the cover P with the revolving plate G and table A, as and for the purpose shown and specified.

5. A sewing-machine table combining a revolving plate, G, and operating mechanism in the manner described, so that said plate and the sewing-machine connected therewith may be made to revolve in a horizontal plane at the will of the operator without interfering with the action of such mechanism.

121,829.—HAT-SWEAT FROM WATER-PROOF PAPER. — William M. Waterbury, New York, N. Y., assignor of two-thirds of his right to John A. Cooke, same place.

Claim.—As a new article of manufacture, sweat-bands made from paper treated substantially in the manner hereinbefore described.

121,830. — LOOM-SHUTTLE. — Charles H. Waters, Groton, and William ORT, Jr., Clinton, assignors to Clinton Wire-Cloth Company, Clinton, Mass.

Claim.—1. The combination of the bobbin, the brake, and the delivery-rolls, substantially as described.

2. The grooved delivery-rolls, constructed and set substantially as described, for the purpose specified.

121,831. — MACHINE FOR MAKING WIRE-NETTINGS.—Frederick C. Charles Weber, Brooklyn, N. Y.

Claim.—1. The stationary cylinder C, provided with the spiral groove or thread *d*, for the purpose of producing convolutions in wire, substantially as herein shown and described.

2. The rotary rod D, fitted through the stationary cylinder, having the spiral groove or thread *d*, substantially as and for the purpose herein shown and described.

3. The method herein described of forming wire-netting by pushing the wire-strands from the winding apparatus through the strands last finished, as specified.

4. The combination of the friction-rollers *a a*, oil-cup *b*, and guide *c* with the stationary cylinder C, spiral thread or groove *d*, and rotary blade or rod D, substantially as herein shown and described.

121,832, antedated December 9, 1871.—GLOVE.—William W. Whitaker, Gloversville, N. Y.

Claim.—As an article of manufacture, a glove consisting of a back or outside portion cut or formed of a single piece, the inner or palm portion consisting of two pieces cut or formed as shown in Fig. II, so that the seam, which unites the thumb-piece to the other palm-piece, shall terminate in the slit formed in the palm of the glove, as shown and described.

121,833.—GLOVE.—William W. Whitaker, Gloversville, N. Y.

Claim.—The parts B and C of a glove, constructed as shown and described, and combined with the outer part A, for the purpose set forth.

121,834.—BUNG ATTACHMENT TO BARRELS. Anton Wieners, Williamsburg, N. Y.

Claim.—The bung attachment composed of the tube B, pipe C, cup *a*, and bell D, all arranged substantially as herein shown and described.

121,835.—SWIVEL-LOOP FOR FIRE-ARMS.—Oliver F. Winchester, New Haven, Conn.

Claim.—The swivel-loop for fire-arms, inserted in the band-plate or other part of the trimmings of the arm, substantially in the manner described, and retained in position by the portion *d* of the metal in the ear of the band or plate, as specified.

121,836. — RAILWAY CROSSING. — Joseph Wood, Red Bank, N. J., assignor to himself and Edwin R. Bennet, New York city.

Claim.—1. The combination of the intersecting rails of a railroad crossing with each other by means of the corner fish-plates arranged in the manner and for the purpose substantially as described.

2. The combination of the intersecting rails of a railroad crossing with each other by means of the corner fish-pieces and bottom plates, all arranged in the manner and for the purpose substantially as described.

3. In a railway crossing, the contracted gauge and spaces for the wheel-flanges to pass, as shown and described.

121,837.—BEE-HIVE.—Elvin S. Armstrong, Jerseyville, Ill.

Claim.—1. The diaphragm F, constructed as described, in combination with the wire-screen, as and for the purpose set forth.

2. The entrance-block B, provided with a central rib and circuitous passage, as described, for the purpose set forth.

121,838.—LOOM SHUTTLE-BOX MECHANISM. John Ashworth, North Andover, Mass., assignor to George L. Davis, John A. Wiley, Joseph M. Stone, George G. Davis, Joseph H. Stone, and James H. Davis, same place.

Claim.—1. The combination and arrangement of two or more eccentrics, substantially as described, to operate a series of shuttle-boxes.

2. In combination with two or more eccentrics and the series of shuttle-boxes, constructed substantially as described, the devices shown, or their equivalents, by which a joint or separate action may be given to either eccentric under the control of the pattern-chain.

3. The inclined yielding catch O in combination with the two parts *m* and *n* of the driver M, constructed and operating substantially as described.

121,839. — BAKING-OVEN. — Adam A. Anll and John A. Anll, Bellefontaine, Ohio.

Claim.—1. The front flue or flues *e*, combined with the furnace or furnaces E, substantially as and for the purposes specified.

2. The combination of the perforated furnaces E, perforated revolving bread-table C', and front flue or flues *e*, arranged and operating substantially as and for the purposes set forth.

121,840.—BEE-HIVE.—Henry A. Bathurst, Clearfield, Pa.

Claim.—The inclined lighting-board *c'* and door *G*, in combination with the comb-frame apartment B and honey-box apartment C, relatively arranged as set forth.

121,841.—FASTENING CARRIAGE-WHEELS.—Bernhard Berndt and Franz Barsch, Williamsport, Pa., assignors of two-thirds of their right to William P. Reiley and Thomas Maitland, same place.

Claim.—1. In combination with the spindle-head A provided with a lug or lugs, *a*, the cap C provided with the plane or planes *f* and stop or stops *g*, substantially as set forth.

2. The cap C provided with the hinged cover D, substantially as set forth.

3. The cover D provided with the stop or stops *h*, in combination with the lugs *a* of the spindle-head, substantially as set forth.

4. The combination of the cap C, cover D, and spring E, substantially as described and shown, for the purposes set forth.

121,842.—HARNESS MECHANISM FOR LOOMS. James Booth, Pottstown, assignor to John Dobson, Philadelphia, Pa.

Claim.—1. In a loom-harness mechanism, the combination of the lever B and straps *i* and *n* for the purpose of throwing the rollers R^1 and R^2 out of action, as above described.

2. The combination of the spiral springs 5 and 6, cords H and *g*, and rollers R^1 and R^2 for raising the heddles, as described, for the above purpose.

121,843.—PUMP.—Henry E. Braunfeld, Philadelphia, Pa.

Claim.—1. The combination and arrangement of case A, buckets B, and shut-off C, substantially as shown and described.

2. The combination and arrangement of case A, buckets B, and shut-off C with the main cylinder E and piston F, substantially as shown, and for the purpose described.

121,844.—WASHING-MACHINE.—Robert M. Bruce, Camp Point, Ill.

Claim.—The movable frame B B, arranged with the stay-rods E E, India-rubber springs K K, catch and lock R, and hooks and eyes P P, as attached to the wash-board H, with the grooved cylinder L, when combined and connected together so as to be attached to any ordinary tub, and operated as herein described, and for the purposes set forth.

121,845. — CEILING ORNAMENT. — Erastus T. Bussell, Indianapolis, Ind.

Claim.—The plate A provided with the perforations *b*, secured to the rod C having the eye D, and with or without the small plate E, in combination with the arms F having the eyes G secured by the cord or wire H, substantially as and for the purpose hereinbefore set forth.

121,846.—DITCHING-MACHINE.—Erastus T. Bussell, Indianapolis, Ind.

Claim.—The concavo-convex rim-disks A and B, supported on the axis D in opposed positions, right oblique and left oblique to the line of draft, the concave sides of the rims C and C' facing each other, substantially as described, in combination with the chute J, scroll-shaped fender L, dirt-shed M, endless apron G, cylinders H and O, wheels K on the axle I, and the vibrating frame F, arranged relatively one to the other, for the uses and purposes hereinbefore set forth.

121,847. — GRAIN-DRIER, COOLER, AND SCOURER. — Lewis S. Chichester and Charles F. Chichester, Brooklyn, N. Y., assignors to Charles F. Chichester.

Claim.—1. The vertical bins of perforated material, into which the grain is supplied, in combination with the slats *c d*, that cross said bins and partially sustain the weight of the grain and agitate the same as it descends, as set forth.

2. The balance-valves *l l* in the diaphragms of the air-chamber *f*, in combination with the bins *a* of perforated material, as and for the purposes set forth.

3. The yielding regulating-platform *g* connected to the valve *i*, in combination with the bins *a*, for the purposes and substantially as set forth.

4. The scouring mechanism, composed of a revolving cylinder below a stationary cylinder or feeding device, as and for the purposes set forth.

5. The revolving disk, connected to the scouring-cylinder by its shaft, and receiving the cleaned grain previous to its delivery, as and for the purposes set forth.

121,848.—CONNECTION FOR IRON AND STEEL BRIDGES.—Thomas C. Clarke and Adolphus Bonzano, Philadelphia, Pa.

Claim.—1. The combination of the lower-chord pins of a bridge-truss with a segmental wrought-iron column, the lower plate and its cylindrical thrust-piece, and the compound suspension-washer, substantially as and for the purpose described and represented.

2. In combination with the post and lower chord, an interposed plate, R, with a projection, *i*, for a thrust-piece for the floor-beams and for holding the floor-beams at any desired angle, substantially as described.

3. The washer S, composed of the beams *d d*, plate *e*, and angle-irons *f*, riveted or bolted together, substantially as and for the purpose described.

121,849. — CHAIN-MACHINE. — Alveus J. Clemmons, Aberdeen, Miss.

Claim.—The combination of the bench *a*, lever *d*, lugs *c*, and clevis *h* having the pins *k*, all arranged as specified.

121,850.—DIVIDER.—Albert A. Cook, Milford, Mass.

Claim.—In a pair of dividers, the combination of the cylindrical extension C and the leg A, provided with a semi-cylindrical groove upon its inner side, with the slit *a a*, with the ears *n n*, and with the thumb-screw D, all constructed, arranged, and operated substantially as described and shown.

121,851. — CLAMP. — Theodore O. Cornish, Woonsocket, R. I.

Claim.—The frame A, provided with rectangular flanches Z and arms B B, in combination with the movable jaws D and clamping-screws G, when constructed and operated in the manner and for the purpose described.

121,852. — SASH-HOLDER. — John Court, Memphis, Tenn.

Claim.—The combination of a window-sash, having notches or ratchet-teeth in one of its edges, with a pawl oscillating with a spindle provided with a shank which operates the tumbler and retains it in any desired position by locking with a suitable notch in the window-frame, these members being constructed and operating substantially as hereinbefore set forth.

121,853.—WINDMILL. — Joseph Cushman, Thomson, Ill.

Claim.—1. The hollow shaft B and rod F provided with the supports *c c'*, in combination with the regulating-wheel G and rudder-wheel E having the pins *n* and fans *o*, substantially as shown and described.

2. The fans C provided with the rods *m*, connecting them with the regulating-wheel G, in combination with the rod F, arranged and provided substantially as shown and described.

3. The fans C provided with the rods *m*, connecting them with the regulating-wheel G, in combination with the rod F and hollow shaft B, eccentric-wheel *p* provided with the band *i*, arranged and operated substantially as shown and described.

4. The combination and arrangement of the hollow cylinder *b* and *c*, with the bars *a a'* of the frame A, substantially as shown and described.

121,854. — APPARATUS FOR TRANSMITTING AND APPLYING POWER.—Thomas Damon, Thompsonville, Conn.

Claim.—The mechanism hereinbefore described, for transmitting and applying power, the same consisting of the combination of the lever C, roller E, and inclined plane D, substantially in the manner and for the purposes set forth.

121,855. — FENCE. — Benjamin G. Devoe, Fredericktown, Ohio.

Claim.—1. The combination of the grooved post B, having a hollow base filled with cemented stone or other suitable material, the grooved post C, the stirrup *d*, creased washer D, and knob or tap *e*, all substantially as and for the purposes herein set forth.

2. The within-described fence, consisting of the corrugated sheet-metal rails A A, grooved posts B C with stirrups *d*, creased washers D, and knobs or taps *e*, all constructed and arranged substantially as and for the purposes herein set forth.

121,856.—SCROLL-SAWING MACHINE.—William H. Dobson and William H. Doane, Cincinnati, Ohio, assignors to J. A. Fay & Co., same place.

Claim.—1. The differential pulley D, connected by segment pulley E and strap F with the saw, and by one or more flexible connections, L L' *l l'*, with the described or other suitable springs K K', for the purpose set forth.

2. The bolts M, nuts N-N' O, and brackets P P' for securing and adjusting the springs K K', substantially as described.

121,857. — CARRIAGE-HUB. — William T. Dole, Peabody, Mass.

Claim.—1. The metallic cap F, the wooden cap-holder E, the screw-bolts and nuts *f g*, and the metallic spoke-carrier A with its projections B C and chambers *d e*, all arranged essentially as set forth.

2. The arrangement of the dust-guard H (fastened to the axle) with the parts A and C of the hub, in manner as shown and described, so as to form, in appearance, part of the hub.

3. The arrangement of the induct *s* and groove *r* with the wheel-journal and the dust-guard H, in manner as shown.

4. The dust-guard H, constructed as described, viz., the hollow frustum H, the socketed projection *k*, and the clamp-receiver *l*, arranged as set forth.

121,858.—DENTAL FORCEPS.—Nephthuli A. Durham, Duquoin, Ill.

Claim.—A jaw, A, constructed with the socket *a* formed in the side or edge of said jaw, combined with the beak B with projecting shoulders *d*, substantially as and for the purpose set forth.

121,859.—MANUFACTURE OF JAPANNED OR ENAMELED HORSE-COLLARS. — George Duxon and Henry Duxon, Brooklyn, N. Y., and Henry Perry, Newark, N. J.

Claim.—1. The process, substantially as herein described, of making japanned or enameled horse-collars.

2. As a new article of manufacture, a horse-collar made of unenameled leather, and japanned or enameled after being made up, substantially as described.

121,860.—PAPERING OR PUTTING UP NEEDLES.—David Evans, Studley, England.

Claim.—The combination of the needle-holder with the flap of the envelope, wrapper, or case, so that the act of raising or lowering said flap will draw the needles out of or allow them to pass into, or partially so, the pocket of said envelope, wrapper, or case, substantially as described.

121,861. — BELT-SHIFTER FOR SPINNING-JACKS.—Albert Fox, Edinburg, Ind.

Claim.—The combination of the lever C, cams D D, and slotted wedge-shaped key or regulator I, all constructed and arranged to operate substantially as and for the purposes herein set forth.

121,862. — BURGLAR-ALARM. — William Fitch Gardiner, Bethany, Canada.

Claim.—1. The pivoted arm E, carrying a match, N, upon one end, and a cord attached to the trigger of the gun at the other, in combination with the detent M, substantially as and for the purpose set forth.

2. The arrangement of the trigger-wire C, disk and rings D, elastic band F, detent M, plate G, cord and weight J, windlass I, and connecting-rod L for operating the pistol B, match-lever E, shaft N, and bell K simultaneously, substantially in the manner described.

121,863. — HARNESS-PAD.—James H. Garrett, Greencastle, Ind.

Claim.—The combination, with the welt pieces *b* placed edgewise on the base leather B, of the housing-leather *b'*, and the binding-strips *b²* folded around the sides and doubled over the edges of the housing-leather to form supports for the welt-flanches, substantially as specified.

121,864.—METHOD OF OPERATING LOCOMOTIVE STEAM-ENGINES.—Gothelf Gürtner and Charles Diebold, Lebanon, Pa.

Claim.—The employment, as motive power in propelling cars, boats, or other portable steam apparatus, of steam contained in receivers entirely disconnected in the generator, substantially as and for the purpose specified.

121,865.—BARREL-FASTENING.—Edward T. Gilmore, New York, N. Y.

Claim.—1. The hoops made in sections, which are connected together by T-shaped links and hooks, and which are tightened up by right-and-left screws, substantially as shown and described.

2. The combination of sectional hoops, as described, with a barrel, A, substantially in the manner set forth.

121,866. — ROCK-DRILL. — Henry B. Gingrich, Bradford, Ohio.

Claim.—The rack J, pawl N, bar M, loop *h''*, pin *d*, and cam D, in combination with the drill I, as and for the purpose set forth.

121,867. — GRAIN-CARRIER. — Ovid Miner Gould, Montreal, Canada.

Claim.—1. A carrier-frame, traveling on the main carrier, substantially in the manner and for the purposes set forth.

2. The novel combination and arrangement of the carrier-frame *g*, mounted on flanged wheels *f*, with friction-wheels *i i'*, drum *h*, tension-pulley *k*, hopper *l* with reversible bottom, or their equivalents, all working together in combination with carrier-frame *a*, drums *b* and *c*, and belt *d*, substantially as and for the purposes set forth.

121,868.—INDIA-RUBBER SUPPORTERS FOR THE ANUS.—Hiram Greentree, Baltimore, Md., assignor to himself and Thomas N. Webb, same place.

Claim.—The slotted rubber band *a*, with the anus-pad A forming an integral part thereof, as described.

121,869. — TIN CAN. — Schuyler E. Gunn, Chicago, Ill., assignor to Frank Sturges & Co., same place.

Claim.—Stamping or pressing the top or cover and bottom of a tin can, so as to form an annular rib or flange, *a*, and soldering the same to the inside of the body or case, substantially as specified.

121,870. — ELECTRO-MAGNETIC SIGNAL-HOUSE.—Thomas S. Hall, West Meriden, Conn.

Claim.—The railroad electro-magnetic signal and battery-house provided with two or more non-conducting chambers or spaces surrounding the battery-chamber and an inclosed signal-cupola, substantially as described.

121,871. — BRICK-MACHINE.—Daniel Hess, Des Moines, Iowa.

Claim.—1. In combination with the posts A and 9 of the machine, the hopper H_9 with its flange *h*, when placed under the conic or inclined top T and over the revolving table H, in the manner shown, and for the purpose described.

2. The revolving top T, constructed as described, in combination with the cogged gear on the same, the pinions M and conic rollers N with their bearings in the hub R on cross-piece B and bearings O P S with the scraper S, all arranged to operate substantially as described.

3. The elbowed pressing-lever Y, with its shouldered pressing-block and pulley-head *y*, connected by a pivot-post with a curved arm, *g*, under the table H, in combination with the spring-rod *e*, post *p*, and arm *f*, to operate the same in their revolution, in the manner and for the purpose set forth.

4. The pressing device W, with its slotted base and pulley *w*, in combination with the fixed slotted guide-post V and headed bolt *v*, all arranged and operated in the manner and for the purpose specified.

121,872. — MANUFACTURE OF IRON AND STEEL, AND FURNACES FOR THE SAME.—Thomas Callender Hinde, Fownhope, near Hereford, England.

Claim.—1. The treatment of iron ores for the manufacture of iron and steel in the manner or by the processes hereinbefore described, whereby the said ores are completely reduced, without fusion or agglutination, in the form of fine metallic particles or dust before being bloomed or welded into wrought-iron or melted into cast-iron or steel.

2. The furnaces and apparatus, constructed and arranged for operation substantially as hereinbefore described, and illustrated in the accompanying drawing, to be used in the manufacture of iron and steel, or in the roasting or calcining of ores other than iron ores, as set forth.

3. The gas-generator or furnace hereinbefore described, and illustrated in Figs. 9 and 10 of the accompanying drawing.

121,873.—IMPLEMENT FOR HANDLING BOXES AND PACKAGES.—Carl Hoffman, New York, N. Y.

Claim.—The package-hook herein shown, consisting of the handle B, protecting-head C, claw D, and point *a*, constructed substantially as and for the purpose described.

121,874. — HORSE-POWER FASTENING.—Hiram B. Hoesler, New Berlin, Ohio.

Claim.—1. In combination with the stake-rod G or its equivalent, and the inclined stake J, the brace H extending from the frame A B to the upper end of stake J, substantially as and for the purpose specified.

2. The combination of the power-frame A B A B, tie-rods F F with hooks *b*, stake-rods G G with eyes *d* and *e*, and inclined stakes J J, said tie-rods extending from a point below the top of one frame piece over the top of the opposite frame piece, and the several parts being arranged and connected substantially as specified.

3. The stay-pin *i* in the frame A B, in combination with the tie-rod F, substantially as and for the purpose specified.

4. The tie-rod F, with hook *b* at its end, having the vertical end *e* thereon, in combination with the power-frame A B A B, substantially as and for the purpose specified.

5. The combination of the power-frame A B A B, tie-rod F with hook *b* and vertical end *e*, stake-rod G with eyes *d e*, inclined stake-J, and brace H with holes *a* therein, the several parts being arranged and connected substantially as and for the purpose specified.

121,875.—WRECKING-FROG FOR RAILWAYS.—Sylvester M. Hudson, St. Louis, Mo.

Claim.—The wrecking-frog, consisting of the pivoted skid H and clamping-bars D C, constructed substantially as described, and secured by a pin, F.

121,876. — COOKING-STOVE. — William J. Keep, Troy, N. Y.

Claim.—1. A stove-grate provided upon its upper side with a series of transverse ribs, which is raised above the surface of its longitudinal bars, substantially as and for the purpose shown and described.

2. The means employed for preventing the grate from dumping while being shaken, consisting of the shaker N provided with the lug *n'* and connected to or with the outer end of the spindle or pivoted bearing M, in combination with the lug *c* secured to and projecting horizontally outward from the side plate C, or their equivalents, substantially as shown and described.

3. A metal lining for a fuel-chamber, so constructed as that the expansion caused by a high degree of temperature shall increase its vertical dimensions without changing its length, substantially as and for the purpose specified.

4. A metal lining for a fuel-chamber, consisting of an imperforate rear wall, O, and a perforated front wall, O', meeting at their upper edges, and from thence extending downward and apart so as to form an air-space, *o'*, having its lower side within the fuel-chamber, substantially as and for the purpose specified.

5. A water-back, constructed with a lower front channel for receiving and containing the water to be heated, and a rear upper channel for the reception and passage of said water when heated, substantially as and for the purpose shown.

6. The water-back P, having its front edge serrated so as to form the projections *p*, substantially as and for the purpose shown and described.

7. The rearward extended portion *d* of the rear end plate or casing D of the center vertical flue, in combination with the contiguous portion of the reservoir Q, and with the heating-chamber R surrounding the lower part of said reservoir and extending below the top oven-flue, substantially as and for the purpose specified.

8. The diving-flue R', situated in front of the lower portion of the reservoir Q and between the same and the rear casing D of the vertical flues, when its upper end and the lower side of its only opening into such flues are upon such a line as to cause the heated escaping products of combustion to enter said flue at the same point and angle, whether the direct or reversed draught is employed substantially as and for the purpose shown.

9. A heating-chamber for inclosing the lower portion of a water-reservoir situated in rear of the vertical flues, and with its bottom below the oven-top when the passage thereto for the entrance of the heated escaping products of combustion is upon a line with said oven-top, substantially as and for the purpose set forth.

10. The chamber R, provided with the rabbet *r* formed within its exterior vertical side walls for containing the upper edge of the warming-closet U, in combination with said closet, substantially as and for the purpose specified.

11. The means employed for securing the warming-closet to or upon the heating-chamber, consisting of one or more lugs, V, projecting horizontally outward from said chamber and passing through corresponding openings within the contiguous por-

tion or portions of said closet, substantially as shown and described.

121,877.—Stove-Pipe Damper.—William J. Keep, Troy, N. Y.

Claim.—1. A register-collar fitted from within into an opening in a pipe, substantially as and for the purpose specified.

2. A register-collar fitted from within into an opening in the pipe and held in position by means of outward pressure, substantially as and for the purpose shown.

3. In combination with a register-collar provided with a central opening, a register having a central boss which corresponds to and fits into said opening, substantially as and for the purpose set forth.

4. A register placed upon or against the inner side of the collar and held in position by the outward pressure of the damper, substantially as and for the purpose shown and described.

5. The register E provided with the central opening *f*, in combination with the damper G provided with the axial bearing H, substantially as and for the purpose specified.

6. In combination with the register E and damper G, the lugs *e*, substantially as and for the purpose shown.

7. In combination with the register E and damper G, the crank L, connected with and operating both of said parts, substantially as set forth.

8. The hereinbefore-described device, as a whole, consisting of the collar B provided with the face or seat C, openings D and *e*, and flange *b*, the register E provided with the boss F, central opening *f*, and lugs *e*, the damper G provided with the bearings *g* and H and the crank L, when the several parts are constructed as shown, and combined with each other and with the pipe, substantially as and for the purpose specified.

121,878. — Lathe. — Benjamin Lawrence, Lowell, Mass.

Claim.—1. The combination of the cutter-head or its operative parts, consisting of a pulley, *a*, slotted plate K, tool-holders G and cutters, and a removable bushing, *b*, all constructed, arranged, and operating substantially as and for the purpose specified.

2. The rest or guide J, consisting of a roll, *g*, and arms and segmentary gears, arranged and operating in connection with the feed-rolls N and P, in the manner and for the purpose specified.

121,879.—Guide for Silk Winding.—John N. Leonard, Rockville, Conn.

Claim.—1. The guide-roller C, held and adjusted in position upon the traverse-rod B by means of rollers E and packing F, substantially as and for the purpose set forth.

2. The combination of the conical rollers E E with the roller C and rod B, substantially as and for the purpose set forth.

121,880.—Stocking for Horses.—William Lewis, Astoria, N. Y., assignor to himself and David T. Way, same place.

Claim.—1. In combination with a laced elastic horse-stocking, the tendon pads E, extending up the sides of said stocking from the ankle to the top, substantially as set forth.

2. The stocking A, of soft vulcanized India rubber, molded to fit the ankle and leg of a horse, and constructed to lace up in front, and with perforations C, longitudinal ribs D, and tendon pads E, as set forth, and for the purpose described.

121,881, antedated November 30, 1871.—Harvester-Gearing.—John P. Manny, Rockford, Ill.

Claim.—1. The combination of the endwise-moving rotating shaft, the wheel mounted on said shaft and beveled on both faces with two bevel-gears of uniform size, mounted on independent parallel shafts carrying spur-wheels of differing sizes gearing with each other, all these members being constructed and operating as described to vary the speed of the cutters.

2. The combination of the endwise-moving shaft, the swinging eccentric skeleton shipper, and its spring detent, all these members being constructed, arranged, and operating as described.

121,882.—Horse-Power.—Marion H. Marmaduke and Benjamin F. Stewart, Santa Fé, Mo.

Claim.—The arrangement of the spur-wheel *b* on boss of large wheel B, the beveled pinion *d*, shaft D, and miter-wheel *d'* on the end of shaft D, frames C C above the shaft or lever-arm A, and the pinion *e* on the vertical shaft E, to form a convenient multiplying mechanism, as specified.

121,883.—Washing-Machine.—Gideon H. Miller, Belvidere, N. J.

Claim.—In a brush-holding cylinder of a washing-machine, the double continuous brushes L, bent and arranged in a radial manner within the recesses *f* of the cylinder F, and secured in place by means of the slats M, substantially as described.

121,884.—Lightning-Rod. — Stephen H. Miner, Winona, Minn.

Claim.—As an article of manufacture, a lightning-rod constructed of the plates *a b* and having the central rib *c* and beads *d*, as specified.

121,885.—Glossing and Fluting Iron.—Charles W. Monroe, Chicago, Ill., assignor to Susan M. Monroe and Julia H. Monroe.

Claim.—A combined glossing or calendering and fluting iron, consisting of the top B and bottom A, corrugated plates *a* and *b*, hinges C, lug *b'*, and button a^3, the several parts constructed and arranged substantially as herein shown and described.

121,886, antedated December 2, 1871. — Desk, Table, and Shelf Combined.—Levi H. Morrill, Falmouth, and Elbridge G. P. Smith, Portland, Me.

Claim.—1. The combination of the divided shelf *d*, hinges *p*, plate *a*, hook *e*, slotted brace *f*, and brace *h*, as herein set forth, the same made rigid, when extended, by means of hooks and studs *r s*, as described.

2. The combination with the divided shelf *d*, having braces *f h*, and upheld as set forth, of the drawers *t t'*, as described.

121,887. — Skiving-Machine. — Jacob H. Madgett, Lynn, Mass.

Claim.—The curved-edged cutter *g*, constructed as described, in combination with the socket C and the bur-wheels B of an ordinary skiving-machine, operating in the manner and for the purpose set forth.

121,888. — Ice-Machine. — Andrew Mühl, Waco, Tex.

Claim.—1. The mode herein described of cooling the pump-cylinder by causing the return ether to surround it before entering the interior of the said cylinder, substantially in the manner shown and set forth.

2. In ice-making machinery such as specified the use of glycerine to lubricate the pump-cylinder and piston-rod, substantially as shown and set forth.

3. The combination, with the pump and pipe or pipes leading therefrom to the condenser, of the exhaust-valves and traps connected with said valves for receiving and carrying off the impurities discharged with the gas or vapor from the pump, substantially as shown and set forth.

4. The use of the return-ether vapor to more effectually cool and hasten the condensation of the other passing from the pump to the freezing-vessel, substantially as herein shown and set forth.

5. The combination of the pump, the two condensing-worms, (one surrounded by a worm through which the return ether passes,) the reservoir, and the freezing-vessels, said parts being arranged and connected together for joint operation, substantially as shown and set forth.

6. The freezing-vessel connected with the pump, as described, in combination with the system of pipes and cocks whereby the liquid and other impurities which collect in its hollow partitions and walls may be discharged therefrom, substantially as shown and set forth.

121,889.—Manufacture of Steel in Crucibles.—Charles Motier Nes, York, Pa.

Claim.—1. The manufacture of steel from pig or cast iron and Codorus ore in a crucible, substantially in the manner herein described.

2. The manufacture of steel from old horseshoes or other wrought-iron and Codorus ore in a crucible, substantially as herein set forth.

121,890. — Outhaul Band for Booms.—George Nevenger, Philadelphia, Pa., assignor to Harvey J. Mitchell, same place.

Claim.—The combination, with the outhaul band B, of the clevis D, bolt and key F, all constructed and operating as described.

121,891.—Steam-Engine. — Ezra Nicholson, Cleveland, Ohio, assignor of two-thirds of his right to Charles B. Stilwell and John J. Clause, same place.

Claim.—1. The frame A, having pillars *b b'*, journals *c c'*, and ports *i i' i''*, when constructed as herein shown and described.

2. The crank-wheel F, having wrist-pin *d* and groove F', in combination with the engine herein described, as and for the purpose set forth.

3. The combination of the frame A, cylinder C, shaft H, balance-wheel B, and crank-wheel F, when constructed and arranged substantially as set forth.

121,892.—Gate for Swing-Bridges.—Alonzo D. Northway, Kenosha, Wis.

Claim.—1. The combination of the gate F G H I jointed to the roadway, the locks K O, cam *f*, roller W, lever T, and roller N, as set forth.

121,893.—Mechanical Movement.—Thomas H. Percival, Harper's Ferry, W. Va.

Claim.—The combination of a double spur-gear, *a b*, with a double lantern-wheel, *e f*, as specified.

121,894. — Bridge. — Charles Pfeifer, St. Louis, Mo.

Claim.—In combination with a bridge-arch composed of two arched members, C C' D D', the abutment-girders or cables E E' extending in direct line from the upper member at one end to the lower member at the other end, substantially as and for the purpose set forth.

121,895, antedated December 2, 1871. — Vise.—Rufus Porter, Bristol, Conn., assignor to himself and G. W. and H. S. Bartholemew, same place.

Claim.—1. The particular construction and combination, herein described, of the slotted hub F, bar G, pawl H eccentrically pivoted in said hub, extension B of jaw A, and the jaws A C, as set forth.

2. The particular construction and the arrangement relatively to one another of the bar B and the open-bottomed saddle D, in virtue of which either jaw may be made stationary or immovable, as herein described.

121,896.—Sewing-Machine.—George Rehfuss, Philadelphia, Pa., assignor to American Button Hole, Overseaming, and Sewing-Machine Company, same place.

Claim.—1. The combination of the eccentric G and eccentric-rod and a vibrating shuttle-driver, arranged substantially as described, so that the said eccentric-rod can be connected to the driver when the latter is moved to either of the two positions illustrated and described.

2. The portion *b* of the eccentric-rod, the spring *d*, and set-screw *c*, by which the said portion *b* is connected to the rod.

3. The perforated ring I interposed between the eccentric and eccentric-rod, as set forth.

4. The thumb-nut *h* adapted to the pin *f*, and having a projection, *k'*, adapted to a segmental recess, *i'*, which is concentric with the rounded end of the slot *i* of the eccentric.

5. The movable race-plate D having a spring-pin, *x*, or its equivalent, by which the said race-plate is made self-locking in either of the two positions to which it has to be adjusted.

121,897.—Stuffing-Box.—Phillip W. Richards, Boston Highlands, Mass

Claim.—1. The sectional rings D and E having square joint *a*, substantially as shown and described.

2. A sectional ring constructed so as for the one section to pass by the line of its split with the next section, and to lie within the same, substantially as described, for the purpose specified.

121,898. — Manufacture of Nitro-Glycerine.—Edward A. L. Roberts, Titusville, Pa.

Claim.—1. The combination of movable and immovable parts, by which the nitro-glycerine is made on a surface kept cool by cold applications on the opposite side, substantially as hereinbefore described.

2. The revolving cylinder, with the parts or attachments effecting the cooling and mixing process, substantially as hereinbefore described.

3. The mixing of the acids and glycerine in a tube so constructed as to produce the tumbling or cascading of the liquids within, substantially as hereinbefore described.

121,899.—Refrigerator.—Jeremiah Rohrer, Lancaster, Pa.

Claim.—The arrangement of the ice-box K with its ledge I for the ice-supporting bars H, double series of inclined draining-slats R R', when centrally connected over a trough, T, in combination with the ledge M, vessel N, and draining-tube O, all, in relation to each other and a vertical case, substantially in the manner and for the purpose shown and described.

121,900.—Addressing-Machine. — Jonathan K. Rukenbrod, Salem, Ohio.

Claim.—1. The arrangement of the adjustable feeding-arm K upon the rod I, between the prongs of the lever F, and in such relation to the ratchet-teeth *e* and the loose flexible shield M as to be operated by the movement of the hand-lever F directly beneath the shield, which is held by said feeding arm above the type and conforms to the movement of said arm, as shown and described.

2. The arrangement of the rod I with respect to the pivots of the hand-lever F, and the stop N, located upon the box A in the rear of said pivots, as to utilize the same device which carries the feeding-arm to also limit the ascent of the hand-lever, as shown and described.

121,901.—Signal for Railroad Trains.—David Louis Schönberg, New York, N. Y.

Claim.—The platform A provided with lugs *a a* and clamping-screws *b*, as and for the purpose described, in combination with the worm-wheel *c*,

worm *j*, shaft K, racks *f f*, pinion *d*, slides *g g*, lazy-tongs B, and signal C, all arranged and operating substantially as set forth.

121,902.—Preserving and Using Hops in Brewing.—Jacob Seeger and John Boyd, Baltimore, Md.

Claim.—1. As a new article of manufacture and trade, hops ground or pulverized and incased in air-tight packages, as and for the purpose set forth.

2. As an improvement in the process of brewing, the described method of using hops—*i. e.*, in a ground or pulverized condition—as set forth.

121,903.—Apparatus for Separating Fatty Matters from Vegetable Substances.—Thomas Sim, Baltimore, Md.

Claim.—1. In combination with vat A B and a still, a steam-jet vapor-exhauster, operating substantially as described.

2. The vat A B, mounted on trunnions upon a traversing carriage, by which it is made presentable at the various stations, substantially as and for the purpose described.

3. The arrangement of several vats on a circular or other track upon a carriage or carriages, or in a series, so as to be consecutively presented in the charging, operating, and discharging situations, for the purpose described.

4. The general arrangement of the vats A B, &c., reservoir E, still H, condenser K, vapor-eduction P, reservoir R, and general reservoir L, substantially as described and represented.

121,904.—Medical Compound for Treating Constipation, &c.—Cicero A. Simmons, Waldo, Fla.

Claim.—The medicine herein described, compounded of the ingredients, in the manner and for the purposes specified.

121,905.—Valve for Steam-Engines.—Charles B. Smith, Newark, N. J., assignor to himself and Lysander Wright, same place, and William L. Chase, New York city.

Claim.—The cut-off valve D, made flat on its face with curved ends *m m*, and arranged to have a reciprocating independent motion on or over the back of the main valve; also pivoted, as at A, for adjustment about an axis which is at right angles to the line of travel of the main valve, in combination with the curved outer orifices of the ports *e e* in the latter, substantially as specified.

121,906.—Potato-Digger.—Malcolm Stewart, Southfield, Mich.

Claim.—1. The spurred rods or teeth H H, in combination with alternate curved rods or teeth G G projecting rearwardly from the scraper A of a potato-digger, substantially in the manner and for the purpose herein set forth.

2. The scraper A, curved bars E E, and braces F F, in combination with each other and with the handle-beams B B, when arranged and constructed substantially as and for the purpose herein set forth.

121,907.—Loom Shuttle-Box Mechanism.—Joseph M. Stone, North Andover, Mass., assignor to himself, George L. Davis, John A. Wiley, George G. Davis, Joseph H. Stone, and James H. Davis, same place.

Claim.—1. The combination of the two eccentrics upon one side of the loom with the corresponding eccentrics upon the opposite side by means of the two concentric shafts, substantially as described.

2. In combination with the eccentrics the shuttle-box levers, formed with forked or slotted ends that embrace the outer eccentrics, substantially as described.

121,908.—Ironing-Machine.—Gilbert F. Taylor, New York, N. Y.

Claim.—1. The end of the spring G arranged in the slot *n*, and provided with guide-rollers *l* engaging with the annular groove in the pressing-roller E, substantially as set forth.

2. The smooth pressing-rollers D E, heating plugs H H, slotted standard C, guide-rollers *l* and *e*, with the slide-box *g* upon the standard B, combined, arranged, and operating substantially as and for the purpose set forth.

3. The rollers *l d* operating in the groove of the rollers *d e*, as described, in combination with the slotted standard C, spring G, slide-box *g*, and standard B, all constructed and operating substantially as described.

121,909.—Ammonia-Engine.—Charles Tellier, Paris, France, assignor to Leopold Bouvier, New York city.

Claim.—1. The application of ammoniacal gas as a means of producing motive power by means of its liquefaction and subsequent absorption in water, substantially as described.

2. The combination of surfaces by means of the inner reservoir A, (Plate 1,) the outer reservoir D, the coil H, and pumps G, or any other similar arrangement for the purpose of securing a perfect and complete exchange between the caloric of condensation and the caloric of vaporization, and thus insure the constant working of the machine, substantially as above described.

3 The general features of the apparatus shown in Plate 2, including the single driving-wheel, the mode of direction, &c., forming a practical application of the ammonia motor as a locomotive for common roads, substantially as above described.

121,910.—Hoisting Apparatus.—Theodore Terrell, Yonkers, N. Y.

Claim.—1. The combination, with the car or traveling platform, of pawls or stops controlled by springs or weights, or both, when said stops are arranged in the base of said platform, substantially as specified.

2. The combination of the pawls D D and springs *c c* or weights *d d*, or both, with the rods *e e* and levers *f f*, with which the lifting-rope C connects, when said devices are arranged in relation with the base B and head B¹ of the car or traveling platform, essentially as described.

3. The combination, substantially as herein described, with the car or traveling platform of a hoisting apparatus, of a governor attached to and carried by said car or platform, and deriving motion through the descent thereof, and a tripping device forming a connection between the hoisting-rope and the stop mechanism applied to the car or platform, said governor operating, as herein set forth, on said tripping device to release the stop mechanism from the rope.

4. The combination of the governor F and its lever *r* with the link *g*, the lifting-rope hook *b*, the levers *f f*, the rods *e e*, and the pawls D D, substantially as specified.

121,911.—Fire-Place.—Rees P. Thomas, Sciotoville, Ohio.

Claim.—1. The fire-place, consisting of a cast-iron front, A, and a fire-clay back, B, molded in a single piece and attached to the front by rods *a a* and nuts *n*, substantially as and for the purposes set forth.

2. The back B, molded of fire-clay in a single piece, with holes to receive the rods *a a*, and with the side grooves *f f* and the dust-holes *e e*, substantially as and for the purposes herein set forth.

3. The damper C provided with the front recess *s* and adjusted by means of rods *c c*, substantially as and for the purposes set forth.

121,912.—Weather-Strip.—John Thomson, Aledo, Ill.

Claim.—In combination with the frame A′, sill B, door H, and rod I, the spring E, secured to the frame A′ and bent into the form shown, for the purpose of operating the strip D in the manner set forth.

121,913.—Disinfecting Compound.—Henry A. Tilden, New Lebanon, N. Y.

Claim.—The compound herein specified, prepared and employed substantially as and for the purposes set forth.

121,914.—Combined Water-Gauge and Cock.—Thomas Todd and William Todd, Schenectady, N. Y.

Claim.—The combination of the screw-barrels A B C with their gauge-cocks D K L, side valves E G, glass tube F, bottom valve H, and top set-screw I, all constructed and arranged to operate substantially as and for the purposes herein set forth.

121,915.—Drier.—James Turner, Chicago, Ill.

Claim.—1. The inlet air-pipe *a*, cap *f*, with its opening *i*, and one or more air-pipes, *h*, in combination with the cylinder C, all constructed and operating substantially as set forth.

2. The combination of the inlet air-pipe *a*, the air-pipes *h*, and outlet air-pipe *a′* with the cylinder C, substantially as and for the purposes specified.

121,916.—Tubular Frame of Wheelbarrow and Truck.—Beckwith W. Tuthill, New York, N. Y.

Claim.—The combination, with the side tubes A A, transverse tubes B or B′, and tie-rods C C, of the cast-metal thimbles or sockets D or D′, constructed to fit or clip the side tubes and to receive the ends of the transverse tubes within or over them, substantially as specified.

121,917.—Broiler.—Cornelius Walsh, Newark, N. J.

Claim.—1. The combination of the gridirons A and D within a reversible curb, which is so constructed as to adapt it either for the fire exposure or for a lid, substantially as described.

2. A reversible broiler, composed of a single annular casing, B, having an attached gridiron, A, and a detachable gridiron, D, provided with a brace, F, having a projection, *f′*, and heel *f″*, all constructed and arranged substantially as and for the purposes specified.

121,918.—Pump.—Zera Waters and Sylvester Bradley, Bloomington, Ill.

Claim.—The cylinder A, heads D D, double-valves E E, connecting-rods G G, guards F F, guide M, handles L L, and bar N, when combined and operating substantially as herein described.

121,919.—Preparing Rattan for Chair-Seats, &c.—Gardner A. Watkins, Gardner, Mass.

Claim.—1. The process of splicing strands of rattan by removing the enamel from the surface of the same and scarfing the ends thereof.

2. The process of splicing the ends of rattan strands together by immersing the scarfed ends thereof in cement, and afterward liquefying the cement deposited thereon, and subjecting them to pressure.

121,920.—Fare-Box.—James F. Winchell, Springfield, Ohio.

Claim.—Lighting the interior of a fare-box at night by light obtained from the head-lamp of the car, thrown by the reflector I through an opening, H, in the head-lamp box, into the chamber for the temporary detention of the fare for inspection, substantially in the manner and for the purpose set forth.

121,921.—Shampooing Apparatus.—Mark L. Winn, New York, N. Y.

Claim.—1. The rubber bottom B forming part of a bowl or basin for holding water or other fluid on and in contact with the head, substantially as herein described.

2. In combination with the helmet A, the flanged rubber bottom B provided with the strap *a′*, and adjusted for use by the straps *b″* and buttons *b′*, substantially as hereinbefore shown and described, and for the purpose set forth.

3. The band or hoop C constructed as described, in combination with the rubber bottom B and the helmet A, substantially as and for the purpose set forth.

4. The bar D and bracket E, in combination with the helmet A and also with the standard F, the latter consisting of the parts *f f′ f″*, *g g′ g″*, and H *h h′ h″*, all attached, operating, and supported substantially as hereinbefore shown and described, and for the purpose set forth.

5. In combination with the collar J, the safety-trough I, constructed and applied in the manner and for the purpose substantially as hereinbefore set forth.

6. The detachable sprinkler M, consisting of the rubber attachment N, in combination with an ordinary sprinkler constructed and attached to a pitcher, substantially as herein shown and described, for the purpose set forth.

7. The hair-drier O, so constructed and arranged that the human hair, when wet, may be dried on the surface thereof by the application of heat, substantially as hereinbefore set forth.

121,922.—Carriage-Door.—Alexander Wright, Wilmington, Del.

Claim.—1. The use of the iron frame E, substantially as and for the purpose hereinbefore mentioned.

2. The curtain strip F, substantially as and for the purpose hereinbefore mentioned.

3. The combination of the iron frame E and the curtain strip F, substantially as and for the purposes hereinbefore set forth.

121,923.—Advertising-Lantern.—Thomas L. Wright, New York, N. Y.

Claim.—The transparency or lantern, as a new article of manufacture, of polygonal form, and constructed of the wire frame, to fold, substantially as and for the purpose set forth.

121,924,, antedated November 27, 1871.—Knitting-Machine and Process of Knitting.—Nathaniel Clark, Malden, Mass.

Claim.—1. In combination with the parallel rows of needle-beds and needles, the jack made detachable, and fastened in position by the spring *l* or its equivalent to enable the jack to be slipped into or out of position, substantially as shown and described.

2. The jack made in two parts, jointed together and so as to open and close, substantially as described.

3. The process, substantially as described, of narrowing a tubular or flat web at three or more points along the web.

REISSUES.

4,664.—Cotton-Gin.—Daniel Pratt, Prattville, Ala.—Patent No. 17,806, dated July 14, 1857; extended seven years.

Claim.—1. The ledge *e* secured or placed within the hopper-box E, as shown, so as to close the central portion of the lower end of the hopper or box, and cause the cotton, when fed into the box as described, to be fed spirally to the saws from the con-

ter of the box toward each end for the purposes described.

2. The slide G, provided with the ledge *d* and swinging on pivots *e* placed in rear of the longitudinal vertical central plane of the saw-shaft B, substantially as shown and described.

3. The swinging hopper E, provided with the adjustable wedge-shaped rests *x x* in combination with the side G, provided with the shoulder *d* and pivoted, as shown substantially as described and specified.

4. The adjustable slotted wedge-shaped rests *x*, when arranged and used substantially as shown and described.

4,665. — CULTIVATOR. — Flavius J. Underwood, Rock Island, Ill., assignor to Basil D. Buford, same place. — Patent No. 85,412, dated December 29, 1868.

Claim.—1. In combination with the plow-beams E and round axles C, a coupling-joint, G, which, encircling the axle, turns around it as a center.

2. In combination with the elements last aforesaid, a joint upon which the plow-beams may swing horizontally as well as have a vertical oscillation.

3. The studs *i* upon the axle, in conformation with the plow-beams and grooved boxes *g* forming part of the joint coupling G.

4. A series of studs, *i*, arranged along the axle C, in combination with the plow-beams and adjustable grooved couplings.

5. The coupling G, including in its construction the parts *g*, *p*, *h*, and *f*.

6. In combination with the bent beams E and shanks F, the bolts *a*, boxes *b*, and plates *c* for adjustably connecting the shanks and beams.

7. In combination with the shanks F and a device substantially such as set forth for connecting them, the bent beams E, when made round at their lower ends so that the shovels may be adjusted to throw the earth to either side and be raised or lowered to regulate the depth of plowing.

8. In combination with the plow-beams E, a frame, B C, to which the said beams and the wheels are attached, and a frame, A, adjustably connected with one another so that the frame A can be raised or lowered without affecting the position of the plow-beams and plows, substantially as set forth.

9. The parts last aforesaid when adjustably connected horizontally in relation to one another, substantially in the manner set forth.

10. The axles C C and bar B, when respectively so constructed that the axles may be attached or detached, substantially as set forth.

11. The bar I and plow-handles in combination when so arranged as to limit the distance to which the handles may be separated, but leaving them free to be approached at the will of the operator.

4,666.—LUBRICATING BOLSTER FOR SPINNING-MACHINES. — Moses P. Wilmarth, North Providence, R. I., assignor to Alvin F. Jenks, Stephen A. Jenks, John R. Fales, and Francis J. Rabbeth. — Patent No. 39,190, dated July 7, 1863.

Claim.—1. A close-bottom oil-chamber, *c*, with a tapering inner wall formed in the head of a bolster, D, in combination with a spindle-bearing, substantially as described.

2. The combination of the above-described oil-chamber *c*, the fibrous absorbent E, and the spindle-bearing, substantially as specified.

3. The combination of the cap C, the absorbent E, the oil-chamber *c*, and spindle-bearing, substantially as described.

4,667.—ANIMAL POKE.—Harlow F. Chapin, Rochester, N. Y.—Patent No. 112,546, dated March 14, 1871.

Claim.—1. In combination with an animal poke, a connecting-strap, *d*, which is capable of engagement and disengagement, for the purpose specified.

2. The combination of the cushioning-pad *c* with a strap, *d*, and bars A A, for the purpose specified.

3. In combination with the pins *i i* and cross-girts *e g*, the spiral springs *s s*, arranged and operating substantially as and for the purpose set forth.

4,668.—EXPANSIVE BIT.—William A. Clark, Wellsville, Conn.—Patent No. 20,192, dated May 11, 1858; reissue No. 3,516, dated June 22, 1869; reissue No. 3,733, dated November 16, 1869.

Claim.—1. The arrangement of the stationary lip C and the adjustable lip B, substantially as described, whereby all the chips made by the instrument are delivered upon one and the same side of the shank, thereby allowing the back side of the shank of the bit to be left entire, as set forth.

2. The formation of a V-ledge, *a*, in the recessed shank, and a correspondingly-shaped recess in the adjustable cutter back of or above its cutting-edge, to fit the ledge in the shank, substantially as and for the purpose set forth.

3. The combination, with the recessed shank and adjustable cutter, in which a V-ledge and a correspondingly-shaped recess are respectively formed, as specified, of the follower and screw for driving home the cutter against the V-ledge, which forms its lower bearing and binds it to the shank, substantially as shown and described.

4,669.—TREADLE ATTACHMENT FOR SEWING-MACHINES. — Warren Glover, Millbury, Mass., assignor to Ai B. Shaw. — Patent No. 232, dated January 29, 1861.

Claim.—1. A clutch applied to driving-shafts of sewing and other machines, and connected with the treadle by the means shown or any equivalents thereof, for the purposes described.

2. Connecting a clutch with the treadle by the means shown or any equivalents thereof, for the purposes set forth.

4,670. — CAR-SPRING. — Albert Hebbard, Cambridge, Mass., assignor to himself and John P. Onderdonk, Philadelphia, Pa.—Patent No. 53,222, dated March 13, 1866; reissue No. 4,335, dated April 11, 1871.

Claim.—A nest-spring of concentric spirals, open or uninclosed at the sides.

4,671. — MACHINE FOR PREPARING SISAL GRASS AND LIKE SUBSTANCES. — George E. Hopkins and William B. Shedd, Boston, Mass.—Patent No. 110,237, dated December 20, 1870.

Claim.—1. In machinery for crushing, scraping, and cleaning the leaves and stalks of fibrous plants, the combination, with rolls for crushing and expressing liquid or semi-liquid matter from the plant, of scrapers for separating the pulp or pith from the fiber, and drag-rollers for drawing the plant through said scrapers, substantially as herein shown and described.

2. In machinery such as specified, the combination of the scrapers which separate the pulp or pith of the plant from the fiber with drag-rollers to draw the plant through said scrapers, substantially as herein shown and set forth.

3. The movable scraper N and stationary scraper M, constructed and operating in connection with each other, substantially as herein shown and described, to clean the fibers as the crushed leaves or stalks are drawn between them.

4. The combination of the crushing-rollers B, scrapers M N, rubber rollers H, and revolving brush K with each other and with the frame A, substantially as herein shown and described, and for the purpose set forth.

5. The combination of the endless apron R with the revolving brush K, rubber rollers H, scrapers M N, and crushing-rollers B, substantially as herein shown and described, and for the purpose set forth.

6. The combination of the rack or frame X, spring E', shaft Y, ratchet-wheel Z, and pawl D' with the band B' and endless apron R, substantially as herein shown and described, and for the purpose set forth.

4,672.—Division A.—HARVESTER.—Ketchum Harvesting-Machine Company, assignee, by mesne assignments, of William F. Ketchum, deceased.—Patent No. 8,724, dated February 10, 1852; reissue No. 259, dated February 28, 1854; reissue No. 466, dated June 2, 1857; extended seven years; reissue No. 3,033, dated July 14, 1868.

Claim.—1. A shoe, F K, for the support of the finger-bar, when constructed so as to act as a shield or cover for the protection of the cutting apparatus against clogging, and as a finger against which to cut, and when provided with a slot, *h*, to act as a guide-way and passage for the cutter-bar and blade, substantially as set forth.

2. The shoe F K projected forward and upward from the heel of the finger-bar, and connected with the frame, substantially as and for the purposes specified.

4,673.—Division B.—HARVESTER.—Ketchum Harvesting-Machine Company, assignee, by mesne assignments, of William F. Ketchum, deceased.—Patent No. 8,724, dated February 10, 1852; reissue No. 259, dated February 28, 1854; reissue No. 466, dated June 2, 1857; extended seven years; reissue No. 3,034, dated July 14, 1868.

Claim.—1. The finger-bar C, supported by means of one or more arms or braces extending from the heel of the finger-bar to the front and rear of the frame so as to leave a clear space for the operating mechanism, substantially as set forth.

2. In combination with the arms or braces extending from the heel of the finger-bar, as aforesaid, the brace H, extending from the outer end of the finger-bar upward and backward to the extended cross-bar G, for the purpose set forth.

4,674.—LOCK.—Lyman F. Munger, Rochester, N. Y.—Patent No. 23,040, dated February 22, 1859.

Claim.—The cam D formed with the bits *g h* arranged opposite to each other and out of the same plane, and operating in connection with the tumblers *e* and bolt B, whereby, when the key is inserted and the cam turned in either direction, the bit *g* will raise the tumblers before the bit *h* leaves the notch *f* of the bolt.

4,675.—HAND-STAMP.—Thomas J. W. Robertson, Washington, D. C.—Patent No. 18,249, dated September 22, 1857; extended seven years.

Claim.—1. In combination with a handle and a series of printing-wheels or their equivalents for printing dates, a fixed type-form or printing-die for dating purposes, substantially as described.

2. A hand-stamp having a permanent inscription-form or die provided with an aperture through which the type-wheels work, when so arranged that the said type-wheels may be turned for changing the dates without shifting the fixed form or die, substantially as specified.

3. A hand-stamp having a series of type-wheels provided with holes to receive a locking-pin E, substantially as specified.

4,676.—DITCHING AND GRADING MACHINE.—William J. Wanchope, Brookfield, Ill.—Patent No. 62,171, dated February 19, 1867.

Claim.—1. The carrying-belt G, mounted in a frame having its end next the plow, suspended from and made adjustable in relation to the main frame or rigid supports located at or near the end aforesaid, substantially as described.

2. The combination of the conveyer G with the fixed roller H, roller I, and the adjustable frame or platform L having its movements independent of the main frame, substantially as described.

3. The arrangement of the longitudinally-adjustable bars J within the endless apron G with the rollers I and lever *a*, substantially as and for the purpose specified.

4. The combination of a plow, S, having a side delivery, with a transverse carrying-belt, G, when said plow and the receiving end of the carrying-belt are arranged in line with or nearly in the vertical plane of the main frame or wheels at the side of the machine where the plow is attached, substantially as described.

5. The combination of the plow-beam M and roller or lug *n* with the vertical bars X' for keeping the plow in proper position when changed in height, substantially as set forth.

6. The combination of an independently-adjustable plow having a side delivery with an independently-adjustable transverse carrying belt, arranged to operate substantially as set forth.

DESIGNS.

5,408. — ARRANGEMENT OF GEOMETRICAL FORMS. — Charles Baillairge, Quebec, Canada.

Claim.—The design for a stereometrical tableau, as shown.

5,409. — CARPET-PATTERN.—James Wade, Palmer, Mass.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting in the form similar to the drawings or photographs accompanying this specification.

5,410. — CARPET-PATTERN. — James Wade, Palmer, Mass.

Claim.—The configuration of the design hereunto annexed, when applied to carpeting in the form similar to the drawing or photograph accompanying this specification.

5,411.—THREE-BOTTLE CASTER.—George D. Dudley, Lowell, Mass., assignor to Edward P. Woods, Daniel Sherwood, and Cyrus H. Latham, same place.

Claim.—The design for a caster or stand, substantially as shown in the accompanying photographic illustrations.

5,412.—SHAWL.—Herrmann Erbs and John Barth, Philadelphia, Pa.

Claim.—The design for a shawl, substantially as illustrated and described.

5,413.—SHOW-CARD FOR HAIR-NETS—Thomas Hall, Jersey City, N. J.

Claim.—The design for a show-card for nets, as shown.

5,414.—HARNESS-BRACKET.—James L. Jackson, New York, N. Y.

Claim.—The design of the harness-bracket, substantially as shown and described.

5,415. — HOOK TO HANG HARNESS ON.—James L. Jackson, New York, N. Y.

Claim.—The design of the hook for harness, substantially as shown and described.

5,416.—HOOK FOR HANGING HARNESS ON.—James L. Jackson, New York, N. Y.

Claim.—The design of the hook for harness, substantially as shown and described.

5,417.—CARPET-PATTERN.—Archibald McCallum, Halifax, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,418.—CARPET-PATTERN.—Archibald McCallum, Halifax, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,419.—CARPET-PATTERN.—Archibald McCallum, Halifax, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,420.—CARPET-PATTERN.—Archibald McCallum, Halifax, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,421.—CARPET-PATTERN.—Archibald McCallum, Halifax, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,422.—CARPET-PATTERN.—Archibald McCallum, Halifax, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

5,423.—RACK FOR ROBES.—Michael Nuhn, New York, N. Y., assignor to James L. Jackson & Brother, same place.

Claim.—The design of the castings for the robe-bracket, as described and represented.

TRADE-MARKS.

573.—CAST-STEEL AND CASTINGS.—William Butcher & Co., Lewistown, Pa.

574.—MEDICINE.—Edward Chiles, Philadelphia, Pa.

575.—ALCOHOL.—Chester H. Graves, Boston, Mass.

576.—CLOCKS.—E. Ingraham & Co., Bristol, Conn.

577.—CLOCKS.—E. Ingraham & Co., Bristol, Conn.

578.—CLOCKS.—E. Ingraham & Co., Bristol, Conn.

579.—CLOCKS.—E. Ingraham & Co., Bristol, Conn.

580.—BITTERS.—William H. Knoepfel, New York, N. Y.

581.—CIGARS.—Pincus Pohalski & Co., New York, N. Y.

582.—RUBBER-PAINT.—Rubber-Paint Company, Cleveland, Ohio.

583.—BOOTS AND SHOES.—The Ventilating Water-Proof Shoe Company, Boston, Mass.

584.—BOOTS AND SHOES.—The Ventilating Water-Proof Shoe Company, Boston, Mass.

585.—CEMENT.—Wendt & Rammelsberg, New York, N. Y.

EXTENSIONS.

GEORGE W. PENNISTON, of North Vernon, Ind.—Letters Patent No. 18,766, dated December 1, 1857.

"Improvement in Cotton and Hay Presses."

Claim.—Connecting each of the ropes, which operate the toggle to work the press and draw back the plunger, to separate and independent capstan barrels, arranged to turn freely on the same shaft, provided with a device to lock either of them to said shaft, when desired, substantially as described, so as to save three-fourths of the time heretofore required to retract the press, and the time and labor of reversing the horse twice for each bale pressed.

ISAAC HAYDEN, of Lawrence, Mass.—Letters Patent No. 18,742, dated December 1, 1857.

"Improvement in Long Trunks for Cleaning Cotton."

Claim.—Covering the partitions of an elongated trunk or box, for cleaning cotton and other fibrous substances, with woven wire having the scores formed by the weft crossing the warp of said wire screen, filled with metal or cement, the whole combined in the manner and for the purposes set forth in the foregoing specification.

EPHRAIM BALL, of Canton, Ohio.—Letters Patent No. 18,788, dated December 1, 1857; reissue No. 831, dated September 27, 1859; reissue No. 1,007, dated July 17, 1860.

"Improvement in Mowing-Machines."

Claim.—1. Hinging the right end of the coupling-arm R to the lugs R' R', in combination with curving up the coupling-arm as it extends toward the machine, substantially as shown and set forth.

2. The combination of the shoe or brace bar, which supports the heel of the finger-beam, with the hinge by which it is drawn, arranged above the plane of the cutter and in advance of the heel of the finger-beam, substantially as set forth.

3. Connecting the coupling-arm to the shoe by a hinge, whose axis of motion is on a line with that of the draft-hinge of the finger-beam, in combination with so arranging said hinges, as respects the main-frame, as that the strain due to the draft or drawing of the finger-beam forward will be borne by one end of the main frame and on one side of the axes of the driving and bearing wheels, while the lateral strain through the coupling-arm will be borne by the other end of the main-frame and on the other side of the axes of the driving and bearing wheels.

EPHRAIM BALL, of Canton, Ohio.—Letters Patent No. 18,788, dated December 1, 1857; reissue No. 831, dated September 27, 1859; reissue No. 1,008, dated July 17, 1860.

"Improvement in Mowing-Machines."

Claim.—1. Extending and hinging the coupling-arm R to the shoe which supports the heel of the finger-beam, outside of the frame, in combination with the draft-hinge of the shoe; also outside of the main frame, whereby the finger-beam and cutting apparatus can be first raised up bodily until the coupling-arm strikes against the under side of the frame, and then the outer end thereof turned up toward the frame, substantially as setforth.

2. Mounting the two driving-gear wheels and main-gear wheel on separate axles, in combination with a ratchet-wheel for each driving-gear wheel, each ratchet-wheel being fitted with a pawl that can be made to stand in gear by the forward motion of the machine, and out of gear by the backward motion of the machine, the whole arranged and operating substantially as set forth.

3. The combination of a ratchet-wheel, a pawl, a spring acting on the pawl, and a case with one or both ends of the shaft of the main-gear wheel, whereby the case is made to perform four duties—namely, a support to the pawl, a support to the spring, a cover to protect the pawl, spring, and ratchet, and the connection by which motion is communicated to the shaft of the main-gear wheel, substantially as set forth.

4. The combination of a shield E'', with each of the cases G G, and ratchet-wheels H, substantially as set forth.

5. The combination of balance-wheel L, with shaft K and gear-wheels I J, whereby the balance-wheel is made to perform not only the function of a balance-wheel to regulate the motion of a crank-shaft, but also that of a guide or guard, and shield to keep the gear-wheels I J in their proper and relative positions, substantially as set forth.

6. The combination of a balance-wheel with each end of the crank-shaft and its hangers or bearings, substantially as set forth.

7. Making the pitman in two parts, N N', in combination with uniting said parts, substantially as set forth.

8. The combination of a hinged cutting-apparatus, with a pitman or connecting-rod, swiveled at both ends, substantially as set forth.

EPHRAIM BALL, of Canton, Ohio.—Letters Patent No. 18,788, dated December 1, 1857; reissue No. 831, dated September 27, 1859; reissue No. 1,009, dated July 17, 1860.

"Improvement in Mowing-Machines."

Claim.—1. The combination of the hangers which support the crank-shaft and coupling-arm, with the central pieces A' A', whereby the hangers are made to perform the additional function of braces to the main-frame, substantially as set forth.

2. So constructing and combining a hinged finger-beam with a main frame, as that no part of the finger-beam will project by the rear of the main-frame; nor any part of the main frame by the rear of the finger-beam, whereby an attendant can freely approach the finger-beam from the rear and raise up the outer end thereof to avoid an obstruction, while the heel of the finger-beam is free to rest on the ground and to conform to the inequalities thereof, independently of the up-and-down motions of the main frame, substantially as set forth.

3. The combination of the coupling-arm and finger-beam, with the slotted metallic part S, whereby the finger-beam and cutting apparatus, when turned up toward the main frame to avoid and pass obstructions, will be prevented from falling over against the main frame, substantially as set forth.

4. The combination of the finger-beam, with the coupling-arm and a stop, whereby a portion of the weight of the finger-beam, as it is raised up bodily, after the outer end has been turned up to pass an obstruction, will rest on the left hinges of the coupling-arm, substantially as and for the purposes set forth.

EPHRAIM BALL, of Canton, Ohio.—Letters Patent No. 18,788, dated December 1, 1857; reissue No. 832, dated September 27, 1859; reissue No. 1,010, dated July 17, 1860.

"Improvement in Mowing-Machines."

Claim.—1. The combination, with the main frame of a mowing-machine, of two independent driving-wheels, and a hinged cutting apparatus, whereby the cutters are kept in operation, when the machine is turned either to the right or left, while the cutting apparatus, or either side thereof, is free to conform to the inequalities of the ground, independently of the up-and-down motions of the main frame, substantially as set forth.

2. Hinging one end of the coupling-arm R to lugs on the shoe, which supports the heel of the finger-beam and cutter-bar, in combination with hinging the other end on a line with the longitudinal center of the crank-shaft, which operates the pitman and cutters, substantially as set forth.

3. The combination of the heel of the finger-beam P, and one end of the coupling-arm R, with a strong metallic draft-shoe, substantially as set forth.

4. So hinging the shoe, which supports the heel of the finger-beam to the main frame, as that it will permit the heel of the finger-beam, to which it is rigidly attached, to move freely in the arc of a circle, as it rises and falls, so as not to cramp or bind the joints of the coupling-arm R, or its equivalent, substantially as set forth.

EPHRAIM BALL, of Canton, Ohio.—Letters Patent No. 18,788, dated December 1, 1857; reissue No. 832, dated September 27, 1859; reissue No. 1,011, dated July 17, 1860.

"Improvement in Mowing-Machines."

Claim.—The combination, in a mowing-machine, of the following elements—namely, a rigid tongue to draw and steady the machine by; a frame to support and carry the driver and gearing; two independent driving and bearing or supporting wheels to carry the frame and give motion to the cutters, and a short finger-beam, so hinged to the main frame that its progressive movement over the ground will be controlled by the main frame, and the upward and downward movements of the entire finger-beam, or of either end thereof, independently of the other, by the undulations of the ground over which it is drawn.

EPHRAIM BALL, of Canton, Ohio.—Letters Patent No. 18,788, dated December 1, 1857; reissue No. 832, dated September 27, 1859; reissue No. 1,012, dated July 17, 1860.

"Improvement in Mowing-Machines."

Claim.—1. The combination of the finger-beam and the main frame, with a single yielding brace-bar or shoe, whereby the progressive movement of the finger-beam over the ground will be controlled by the main frame, and the free upward and downward movements of the entire finger-beam, or of either independently of the other, and of the up-and-down movements of the main frame, by the undulations of the ground over which it is drawn, substantially as set forth.

2. The combination of a yielding brace-bar or shoe, Q, and a yielding coupling-arm, R, with the main frame, substantially as set forth.

3. The combination of the short finger-beam with the yielding connection with the main frame, substantially as set forth.

HUGH W. COLLENDER, of New York, N. Y. Letters Patent No. 18,805, dated December 8, 1857; reissue No. 799, dated August 23, 1859; reissue No. 2,510, dated March 19, 1867.

"Improvement in Billiard-Table Cushions."

Claim.—Billiard-table cushions composed of vulcanized India rubber or allied gum with a layer rendered less compressible than the body or back by the incorporation of fibrous or equivalent substances, the said layer and back or body having been united in the green or plastic state and together vulcanized, as and for the purpose specified.

ISSUE OF DECEMBER 19.

PATENTS.

121,925.—Apparatus for Curing Meat.—William Gibson Bell, Boston, Mass.

Claim.—1. In combination with a metallic smoke-house, *b*, the dead-air chambers *c c c*, and non-conducting material *d d*, and frame-work *a a a*, for the purpose set forth and described.

2. The construction and arrangement of the smoke-pipe *m*, surrounded by the heater *p*, in combination with a smoke-house, for the purpose of heating and drying the damp air descending from a smoke-house, as fully set forth and described.

3. The improved hook A for hanging articles of food to be dried or smoked, constructed in a manner as herein fully set forth and described.

121,926.—Fruit-Box. — Charles A. Blair, New Britain, Conn.

Claim.—A fruit or berry box in which the bottom consists of one wide solid splint, A, and narrow transverse splints B B' B, substantially as shown and described.

121,927.—Boot and Shoe.—Mellen Bray, Newton Centre, Mass.

Claim.—1. A boot or shoe having a detachable heel, the outer sole of which is cut short at the rear end, as set forth, and having a heel-plate for securing the heel, formed substantially in the manner shown and set forth, whereby the larger portion thereof rests upon the upper and inner sole and is secured thereto, while the forward part incloses the rear end of the outer sole and is firmly secured to said sole, substantially as described.

2. The heel-plate D, formed, as set forth, with the recess *c* to receive the rear end of the outer sole A, substantially as described.

121,928.—Baggage-Truck.—William Hammond Brown, Bangor, Me.

Claim.—The platform-supporter or two-wheel truck composed of the connection-levers or shafts A A, the wheels C C, hooks *c c*, and pendulous lifter D, arranged in manner and to operate substantially as described, with a platform provided with hooks to project from it, in manner as shown.

121,929.—Pipe-Coupling.—Christian Burger, Reading, Pa.

Claim.—The clamps D, in combination with the screw H and connection E, when combined as shown, and for the purpose set forth.

121,930.—Liquid Soap. — Dominick Cardullo, Titusville, Pa.

Claim.—A liquid soap compounded of the within-named ingredients, substantially in the proportions and for the purposes set forth.

121,931, antedated December 2, 1871.—Addressing-Machine.—William H. Clague and Robert B. Randall, Rochester, N. Y., assignors to themselves and Ezra R. Andrews, same place.

Claim.—In combination with the feed-ratchet *d*, arm *f*, and feed-lever *h*, the knife B, provided with the lifter *n*, constructed and arranged to operate substantially as and for the purposes set forth.

121,932.—Horse-Power. — William Deering, Louisville, Ky.

Claim.—The stationary center or spindle of the master-wheel C when it is projected through the master-wheel for the support of one or more counter-shafts, and when there is added to it the character of a column for the support of a house or frame-work, substantially as and for the purposes hereinbefore set forth.

121,933.—Steam-Boiler Furnace.—George H. Diehl, Chicago, Ill., assignor to himself and Thomas H. Ricketts, same place.

Claim.—1. The steam-pipes U placed inside of the air-pipes L K, and provided with tubes R, in combination with the short pipes T for combining superheated steam and hot air as they enter the fire-box, as set forth.

2. The hot-air chambers D E for concentrating heat at two points back of the fire-box, when combined with steam-pipes P and escape-tubes R, substantially as described.

121,934.—Head-Block.—Thomas Douglass, Warren, Ohio.

Claim.—1. The lever G, dog or head J, as arranged, in combination with the adjustable triangular frame E having notches I therein, and sleeve H, in the manner substantially as described, and for the purpose set forth.

2. The movable standard F, pivoted to the base A, and arranged in relation to and in combination with the frame E and lever G, in the manner substantially as and for the purpose specified.

121,935.—Steam-Engine.—Edward Evans, North Tonawanda, N. Y.

Claim.—The combination, with a tight cylinder, two oppositely-moving pistons, central port L, end ports K K', of the valve M, and partition *i*, substantially as shown and described.

121,936, antedated December 3, 1871.—Toy Monument.—George W. Fisher, Rochester, N. Y.

Claim.—1. A toy monument, consisting of several courses of blocks divided vertically, and suitably connected together within the periphery or outline of the made-up sections, for the purpose set forth.

2. A toy monument having its several sections sustained in a vertical position by means of a base, *d*, and rod *b*, with or without the pediment *e f*, substantially as and for the purposes set forth.

121,937.—Meter.—Valentine Fogerty, Boston Highlands, Mass.

Claim.—1. In combination with the main cylinder and its two induction and eduction ports at its opposite ends, the auxiliary and parallel induction and eduction cylinders, each having a reciprocating piston in line with the inlet or outlet of the cylinder, and each piston being arranged to operate at each movement as a valve to close entrance into one chamber of the induction or eduction cylinder, and open entrance to the other chamber thereof, substantially as described.

2. In combination with the auxiliary induction and eduction cylinders, the valve-seat tubes *u*, substantially as described.

3. In combination with the induction and eduction cylinders, valve-seat tubes *u*, made adjustable, substantially as described.

4. In combination with the induction and eduction cylinders and main cylinder *a* and the ports *p q* thereof, the cap-ports *w*, each communicating with the adjacent eduction-cylinder, substantially as described.

5. The combination of the pistons *h i*, stems or rods *r*, and levers or rocker-beams *s t*, arranged and operating substantially as shown and described.

6. The register-pin f^3, extending through the main-cylinder-head when packed, substantially as shown and described.

121,938.—Sign for Street-Lamps.—John T. Foley, New York, N. Y.

Claim. — The portable directory-frame A, the transparent slides B B, the grooves *a a*, the clamps C C, projections *c c*, and metal strips E E, all arranged and combined substantially as and for the purpose hereinbefore set forth.

121,939.—Grain-Thrasher and Separator.—Charles S. Hall, Rochester, N. Y.

Claim.—1. The endless raddle A, composed of slats *b*, constructed and arranged substantially as described, in combination with a suitable agitator, *a*, whereby the grain is permitted to pass between the slats above and below said raddle when thrown out of line by the agitator, for the purpose set forth.

2. In combination with the thrashing-cylinder B, the grating C having a smooth upper surface, and provided with openings running parallel with the line of rotation of the cylinder, for the purposes set forth.

3. The grating C, constructed substantially as shown and described, and made adjustable vertically by means of regulating-screws *p* or their equivalents, substantially as and for the purposes set forth.

121,940.—Needle-Sharpener. — Thomas Harris, Cote St. Paul, Canada.

Claim.—A turning mandrel, A, provided with the slot *a*, cap *b*, pad 3, and needle-hole 2, substantially as and for the purpose described and represented.

121,941, antedated December 1, 1871.—Reclining and Folding Chair.—E. Warren Hastings, Boston, Mass.

Claim.—1. The construction and arrangement of the rocking-lever *t*, in combination with the connecting-rods *s* and *u* connected to the back and foot board, for the purpose set forth.

2. The construction and arrangement of the brace *w* or its equivalent, in combination with the rocking-lever *t*, connecting-rod *u*, and foot-board *i*, for the purpose as herein set forth and described.

3. The construction and arrangement of the hinge-pin plates *m m* attached to the back *k*, and provided with the pivot *l*, shoulder *q*, circular slot-hole *n*, in combination with the set-screw *o*, for the purpose of confining the back in any desired position.

4. The construction and arrangement of the shoulders *q q* attached to the hinge-pin plates *m m*, for the purpose of raising or lowering the seat *h* automatically, as herein fully shown and described.

121,942.—Air-Register. — Henry F. Hayden, Washington, D. C.

Claim.—A register for hot or cold air, consisting of the ring or base A, the disk or second plate B with its shank or shaft D, and the top or cover C, all constructed and arranged to operate substantially as described.

121,943.—Coffin. — Michael M. Hersman, Delavan, Ill.

Claim.—An interior soft-metal coffin, A, with shoulder or recess *a* for the reception of the lid B, and a soft fusible metal flange, *c*, for turning down over said edge.

121,944.—Hemmer for Sewing-Machines. William Johnson, Haverhill, Mass.

Claim. — The hemmer herein described, made from a single piece of metal, shaped and folded as set forth.

121,945.—Rocking-Horse.—Ernst Kirsch, South Amesbury, Mass.

Claim.—A rocking-horse made of the bent stock, constructed, connected, and relatively arranged, substantially as described.

121,946. — Colored Paper. — George La Monte, George G. Saxe, and Charles H. Clayton, New York, N. Y.

Claim.—A colored paper superficially dyed in the sheet in or immediately after the process of sizing, during the course of manufacture, and with colors which are fugitive under the action of the acids and alkalies employed for the fraudulent removal of writing, for the purpose of affording a double means of disclosing the alteration of written documents, whether effected by erasure or by the use of chemicals, as specified.

121,947.—Rotary Engine.—Rufus Leach, Bangor, Me., assignor to himself and Michael Schwartz, same place.

Claim.—1. The combination and arrangement of the cams J K and cam O with the collar B, piston D, cylinder C, and pivoted lever E, all constructed and operating substantially as herein set forth.

2. The combination and arrangement of the cams J K, arms E E, pivoted, as described, to the standards F F, rods G G, and abutments H I, operating as herein set forth.

3. The combination of the valve N, rods *d d*, levers *e f* on shaft *e'*, rod *g*, and cam O or O', when arranged and operating as herein specified.

4. The combination of the valve *j*, passages *k* and *m*, and ports *p* and *q* in the abutments H I, when constructed and arranged as shown, and for the purpose set forth.

5. The combination of the piston D, abutments H I having ports *p q* therein, exhaust L, and escape-pipe *i*, when arranged as set forth.

121,948.—Removing Tin from Tin-Scrap. Charles Lennig, Philadelphia, Pa.

Claim.—1. The recovery of tin from tinned metallic surfaces, in the shape of stannate of soda or potash, or as a metallic tin, by the use of caustic alkalies and air alone, oxidizing the tin by the absorption of oxygen from air direct when moistened with alkaline solutions, by the process substantially as herein described.

2. The process of making stannate of soda or potash from tin adhering to tinned metallic surfaces as well as from tin direct, by the use of caustic alkalies, by oxidizing the tin directly with the oxygen of the air, substantially as herein described.

3. The recovery of tin in metallic form from tinned metallic surfaces, by the process substantially as herein described.

121,949.—Lawn-Sprinkler.—Joseph Lessler, Buffalo, N. Y.

Claim.—The combination of the stand and nozzle-holder A D with the nozzle B and flexible hose H, forming a portable water-fountain and sprinkler, substantially as hereinbefore set forth.

121,950.—Saw.—Caleb V. Littlepage, Austin, Tex.

Claim.—A planer and saw-tooth combined in one piece, substantially as shown and described.

121,951. — Method of Forming Saw-Teeth. — Caleb V. Littlepage, Austin, Tex.

Claim. — Saw-teeth produced according to the rule herein laid down.

121,952.—Piano-Forte Action.—Lorenzo Matt, Boston, Mass.

Claim.—The combination of the auxiliary jack or fly *o*, its operative spring *d'*, and mechanism for effecting back movement of the said jack, with the oblique bar or lever I, the two keys A B, and the separate jack-levers C C, combined or arranged with jacks and hammers, as set forth, the said mechanism for effecting back movement of the auxiliary jack consisting of the bar K, the links *e' e'*, and the tri-armed lever L, its spring *h'*, and lever M to be actuated by a pedal or other proper device, all being substantially as explained.

121,953. — Clothes-Rack.—Daniel Miller, Marietta, Ohio, assignor to himself and Jacob Miller, same place.

Claim. — The rack described, consisting of the parts A *a a b'*, in combination with the arms C having the pins *c* c^1 c^2, as and for the purpose set forth.

121,954.—Whip-Stock.—William H. Millikin, Baltimore, Md.

Claim.—The revolving sleeve or collar D, carrying a loop, G, and turning upon a ferrule, B, in

combination with an end screw or cap, F, substantially as and for the purpose herein set forth.

121,955, antedated November 29, 1871.—Crockery and Lamp-Chimney Mop.—Charles S. Moore and Harland P. Boyd, Worcester, assignors to Washington Whitney, Winchendon, Mass.

Claim.—The sliding-sleeve *d*, fixed stem or wire *b*, and disks or holding portion B D, arranged, as represented, relatively to each other, and to the spring C and handle A, and adapted to allow the spring C to be compressed by the force of the whole hand applied on the sleeve *d*, as herein set forth.

121,956. — Mode of Securing Railway Rails to Iron Ties. — Jason Newton, Marengo, Mich., assignor of two-thirds of his right to Henry Moore, and Charles B. Moore.

Claim.—The serrated key E and serrated clamp D, operating in suitable grooves in the iron tie or chair B to secure the inner side of the rail A, in combination with the tapering fish-bar C and end flange *b* of the tie B, supporting and securing the rail's outer side, substantially in the manner and for the purpose set forth.

121,957. — Potato-Planter. — Albert E. Payne, Jonesville, Mich.

Claim. — The endless-belt potato-dropper, as described, in combination with furrow-opener H and coverer K, pivoted to the frame and connected by bar L, operated by the levers M and N, substantially as and for the purpose set forth.

121,958. — Hay-Tedder.—John G. Perry, Kingston, R. I.

Claim. — 1. The combination of the revolving crank-shaft *g* and its supports B with the jointed pieces *f f*, stocks *a a*, axle A, and open wheels S S, as and for the purpose set forth.

2. The arrangement of the revolving crank-shaft *g*, the stocks *a a*, the pieces *f f*, (pivoted one end to the axle and the other end to the stocks *a a* above the crank-shaft gears *m t*,) and open wheels S S, as herein described, and for the purpose set forth.

121,959, antedated December 9, 1871.—Whip-Socket.—George M. Peters, Columbus, Ohio.

Claim. — 1. As a new article of manufacture, a glass whip-socket to be attached to carriages, it being constructed substantially as herein described.

2. The clamp B, when constructed substantially as and for the purpose set forth.

121,960.—Water Cut-Off.—Philip B. Peters, Marietta, Ohio.

Claim. — The combination of the movable diaphragm D, constructed specifically as described, with the plate *d*, shaft d^1, and sides d^2 with the fixed partitions *b* and internal case b^1, the sides of the diaphragm being adapted to move behind the sides of the case, and the catch E F, as described.

121,961.—Device for Supporting Pipe-Cores.—Charles J. C. Petersen, Port Chester, N. Y.

Claim.—The compress F, having inclined bearings *e* and *e'*, bars E, and set-screw *d*, in combination with the handles of a flask, as and for the purpose described.

121,962. — Automatic Steam-Trap.—William Edgar Prall, Washington, D. C.

Claim.—1. The friction-bar and clutch A, when operating so as to prevent the too easy movement of the diaphragm, in the manner and for the purpose set forth.

2. The arrangement of the pipes *l l* connecting the cylinders *a a*, and provided with valves *m* and stop-cocks *n* to regulate the flow of water, as shown and described.

121,963.—Manufacture of Belt-Knives. Benjamin F. Radford, Hyde Park, Mass.

Claim.—The described method of trimming the edges of endless or belt knives or bands.

121,964.—Manufacture of Cutters for Barbed Nails.—Edward Riley, Cleveland, Ohio.

Claim.—The herein-described method of forming the serrations in the cutters for cutting barbed nails by cutting said serrations in the edge of the cutters, substantially in the manner set forth.

121,965. — Sewing-Machine. — Jerome B. Secor, Chicago, Ill.

Claim.—1. The cam-wheel A, shaft D, and inclosing-case E, arranged above the sole-plate of the machine, the shaft D carrying the cams *e* and *e'*, and combined with and operating the feed-bar f^1 and connecting-rod f^2, all substantially as and for the purposes set forth.

2. The needle-actuating arm S^2, its roller F, composed of the shell S and sleeve S^1, in combination with the cam-wheel A and slotted covering case E, all constructed and arranged substantially as and for the purposes described.

3. The shaft D, the cams *e* and *e'*, the feed-bar f^2, the slotted link *l*, and the connecting rod l^1 and screw l^2, when all are constructed and arranged in a sewing-machine, as and for the purposes specified.

121,966.—Check-Lever for Sewing-Machines.—Jerome B. Secor, Chicago, Ill.

Claim.—The slotted, headed, and shouldered pin C, screw S^2, and spring S^3, when arranged within a recess or chamber in a goose-neck of a sewing-machine, and combined with the check-lever B, all constructed as described, and operating as and for the purposes specified.

121,967. — Needle-Holding Device for Sewing-Machines. — Jerome B. Secor, Chicago, Ill.

Claim.—The combination of the needle-bar N, the ring or band N^1, the set-screw N^2, and presser N^3, when constructed and operated as and for the purposes described.

121,968, antedated December 2, 1871.—Governor.—Henry F. Shaw, West Roxbury, Mass.

Claim.—The automatic expanding-pulley G G G G H, in combination with the belt T, operating substantially as described, and for the purpose set forth.

121,969. — Mode of Cutting Boot and Shoe Soles.—Samuel J. Shaw, Marlborough, Mass.

Claim.—1. As a new article of manufacture, a boot or shoe sole formed by uniting, by a lap-joint in the shank, two pieces of leather of different qualities, substantially in the manner and for the purpose set forth.

2. The patterns A B, of different qualities of leather, to be divided and formed into soles, substantially in the manner and for the purpose set forth.

121,970. — Paper-Pulp Engine.—Charles Smith, South Windham, Conn., assignor to Smith, Winchester & Co., same place.

Claim.—The male grinder, as constructed with each of its blades or knives beveled or rounded at each or either of its ends, such being substantially as and for the purpose as specified.

121,971. — Protective Electric Telegraph.—Joseph W. Stover, Boston, and Moses G. Crane, Newton, Mass.

Claim.—1. The combination of a local circuit, a clock mechanism, and a main circuit, the clock mechanism being the means of communication between the local circuit and the main circuit and having a rotary main-circuit breaking-and-closing wheel, which at each break of the local circuit is caused to intermittently break and close the main circuit, and by such breaking and closing to effect an alarm at the central office, substantially as described.

2. A signal-box containing a local-circuit magnet, an armature effecting connection and disconnection between such magnet and the gear or clock-train, (the armature being normally closed against the magnet,) a gear-train actuated by a spring or weight and set in motion by release of the armature, and a rotating main-circuit breaking-and-closing wheel actuated by the gear-train.

3. In combination with the local circuit, normally closed, the main circuit and the gear-train and main-circuit breaking-and-closing wheel, the cut-out switch or switches, substantially as shown and described.

4. In combination with the local and main circuits and connecting mechanism, arranged substantially as described, the test-circuit and the gong struck by the hammer projecting from the test-magnet armature-lever, substantially as shown and described.

5. In combination with the local circuit, normally closed, and the main circuit and gear-train, and the rotary main-circuit breaking-and-closing wheel, the stop on the armature-lever and the stops on the gear-wheel *y*, so arranged that by the breaking of the local circuit the gear-wheel is liberated and rotates, but at the end of one rotation is arrested, substantially as shown and described.

6. The general construction and arrangement of the system, substantially as shown and described.

121,972, antedated December 12, 1871.—Flower-Stand for Windows.—Francis W. Test, Chicago, Ill.

Claim.—The construction and arrangement of the bars D, D', and F, slide-bars E, stops *b*, pins *a*, brackets G, and shelves H, substantially as and for the purpose set forth.

121,973, antedated December 1, 1871.—Boiler for Domestic Purposes.—Franklin Till, Reading, Pa.

Claim. — 1. The combination, with a stove or range, of a tubular boiler provided with supply and discharge water-pipes, and arranged within a flue so as to be heated by the waste products of combustion from the stove or range, substantially as set forth.

2. The combination of the subject-matter of the preceding claim and a heating-pipe, L, extending from the boiler into the stove-pipe.

3. The said boiler, in combination with a stove or range, as described, and arranged within a chamber or flue provided with registers *f* and *f'*, as set forth.

121,974.—Hand-Protector.—John Turnbull, Simsbury, Conn.

Claim.—1. The hand-protecting device for holding and manipulating a cord, substantially as herein described.

2. The combination of a hollow handle with a griping device for holding or releasing a cord by the pressure of the hand, substantially as herein set forth.

3. The combination of a hollow handle with a griping device and a knife, substantially in the manner herein described.

121,975, antedated December 9, 1871.—Ice-Machine Using Ammonia.—Alexander C. Twining, New Haven, Conn.

Claim.—1. The combination of the transfer-pump or any equivalent apparatus with the absorber and the refrigerator of an ammonia ice-machine, or the description of machine referred to herein, to cut off pressure or tension of gas in the absorber from the refrigerator and transfer the ammoniacal gas, with such tension, from the refrigerator to the absorber, in manner and use substantially as described.

2. In the same or like machine, the combination of an induction-pipe common to different refrigerators with the transfer-pump or any equivalent thereof, and an absorber or absorbers, substantially as and for the purpose described; and in like manner and form, the combination of an eduction-pipe common to different absorbers with the transfer-pump and with a refrigerator or refrigerators.

3. The combination of the essential parts, or of any substantially the same, in the above-described apparatus or process for transferring ammonia from the poor-liquor channel or conduit to the liquefier; also, the conservator, whether used as part of said combination or employed by itself, to conserve the power or regulate the current of the poor liquid, as described.

4. The use, in combination, of the essential parts, or any competent number of them, or of any substantially the same, in the above-described apparatus or process for supplying ammoniacal gas to the machines; and, also, in the above-described apparatus for procuring or producing pure or concentrated aqua-ammonia from impure or weak liquor.

121,976.—Treadle for Sewing-Machines. John B. Winslow, Charlestown, Mass.

Claim.—The arrangement of one or more treadle-levers, *i*, made in one piece, with the cog-segment *i* rocking around the fulcrum *u* and operating the pinion *g* and jointed pawl *r* either on the inside or outside of a smooth drum, *e*, as and for the purpose set forth.

121,977.—Incubator.—Erastus Woodward and Nathaniel J. Millett, Charlestown, Mass.

Claim. — 1. The combination of the flexible diaphragm, 1, with a gas or oil-lamp, to be acted upon by the expansion or contraction of air or gases, as and for the purpose set forth.

2. The arrangement of a chimney, *k*, connected to one or more horizontal flues, *l l*, passing through the water-tank *m*, for the purpose of increasing the heating surface of the apparatus, as herein set forth and described.

3. In combination with a flexible diaphragm, 1, the air-chambers *v v*, connecting-pipes *w w*, and the conducting-pipe *x*, for the purpose set forth.

121,978.—Faucet.—James H. Alexander, Geneva, N. Y.

Claim.—1. The combination of the parts *a d f g h*, as constructed and arranged, operated by a removable tubular key, substantially as described, for the purpose specified.

2. The tubular key A, in combination with the coupling screw-collar B and tap *d*, substantially as described, for the purpose specified.

121,979, antedated December 5, 1871.—Steam-Boiler. — John Henry Ansell, Pontiac, Mich.

Claim.—The combination of the boiler, formed of the feed-tube C, tubular ribs D D, and dome E, and the feed-pipe G running the entire length under the boiler and acting as a heater, substantially as and for the purposes herein set forth.

121,980. — Door-Securer.—Daniel Arndt, Cleveland, Ohio.

Claim. — The within-described door-fastening, composed of the shank A, with chisel-point B, jaws C C', with notch *a*, groove *b*, rib *d*, and tooth *e*, all substantially as and for the purposes herein set forth.

121,981.—DUMPING-CAR.—Charles Barrett, Boston, Mass.

Claim.—The intermediate frame or base B, constructed as herein shown and described, in combination with the dumping-box or bed C, provided or not with ears *g*, and hinged to said frame in the manner and position specified, and the truck or car A, under the arrangement shown and set forth.

121,982. — RUBBER ERASER. — William N. Bartholomew, Newton Centre, Mass., assignor to Joseph Reckendorfer, New York city, N. Y.

Claim.—A rubber eraser, composed of a stick or pencil of vulcanized rubber erasive compound, of distinctively pencil-like form, and a surrounding sheath of paper, leather, or equivalent material, the two being united by glue or other cement, which, like glue, will harden on drying, substantially as herein shown and set forth.

121,983.—MANUFACTURE OF BARN-FORKS.—Calvin T. Beebe, Jackson, Mich., assignor of one-half his right to Elihu Cooley, same place.

Claim.—1. The method of constructing the fork, as herein described.

2. The fork constructed as described.

121,984.—MEDICAL COMPOUND OR FEVER-AND-AGUE CURE. — Louis Bodenheimer, Paducah, Ky.

Claim.—The compound for chill-and-fever cure, consisting of cream of tartar, tartaric acid, and milk, combined in the proportions and manner substantially as specified.

121,985. — STAMP-GUIDE.—Henry Bolthoff, Central City, Col. Ter.

Claim.—1. The combination of the stamp-guide B, filled with elastic packing F, with the threaded follower E, when constructed and arranged as and for the purpose set forth.

2. The combination, with the stamp-shaft A, of the guide B, having projection H and corresponding cavity I on the opposite sides of wings C C, as shown, and for the purpose specified.

121,986. — REVENUE-STAMP CANCELER.—Franklin W. Brooks, New York, N. Y., assignor to National Manufacturing Company, same place.

Claim.—The toothed plate or arm F *f*, applied and operating as herein described, in connection with the plate or frame B, flap C, and lock D E.

121,987.—SEAL-LOCK.—Franklin W. Brooks and George A. Everett, New York, N. Y., assignors to The American Seal Lock Company, same place.

Claim.—The seal-lock herein described, consisting of the frame or shackle A and the sliding bar B, the latter carrying the seal S, of glass or analogous material, and secured by an interlocking spring-catch, D *d*, engaging with a lip, *b*, on the bar, substantially as described.

121,988. — BALE-TIE. — Floyd G. Brown, Brenham, Tex.

Claim.—The bale-tie buckle herein described consisting of the plate A provided with the open ings *f g*, clefts *c c*, and slot *h*, constructed and arranged to operate substantially as specified.

121,989. — MEDICAL COMPOUND FOR THE CURE OF CHILLS AND FEVER. — Isaac Brown, Philadelphia, Pa.

Claim.—The compound herein described, of or of about the proportions stated, and used as a cure for the disorders stated.

121,990.—SPRING FOR BEDS AND SEATS.—James P. Chamberlain, North Abington, Mass.

Claim.—The continuous open spiral spring-tempered band or bands *a*, suitably secured to a rail or rails *b*, substantially as described, and for use as specified.

121,991. — WATERING DEVICE FOR RAILROADS. — Danforth Cheney, Brookfield, Mo.

Claim.—1. The pipe G, made longitudinally extensible, and provided with the packing ring *m*, and guide-pin for its parts *k l*, as specified.

2. The combination of the stand-pipe or reservoir A, hollow column B, valve C, and weighted-lever D with the strap E, hinged pin G, and weight H, all arranged to operate as set forth.

3. The combination of the pipe G with the rope I, pulley *p*, tube *o*, strap F, and weight H, all arranged as set forth.

121,992. — ADJUSTABLE AND DETACHABLE STRAP FOR GARMENTS.—Samuel L. Clemens, Hartford, Conn.

Claim.—As an article of manufacture, the adjustable and detachable back-strap for garments, it being provided with devices for adjusting its length, and with button-holed ends for direct attachment to the clothing, substantially as set forth.

121,993.—PAPER-FILE.—Louis Cohn, Montreal, Canada.

Claim.—1. The combination of the stock *a* and sliding frames *h i*, as described.

2. The combination of the stock *a*, bar *j*, slide *k*, and brace *m*, as set forth.

121,994.—PURIFYING BRINE FOR MANUFACTURE OF SALT.—Leffert R. Cornell, Syracuse, N. Y.

Claim.—1. The addition to salt brine of ammonia, substantially as hereinbefore set forth.

2. The addition to the brine of caustic lime after or in combination with the treatment of the brine with ammonia, substantially as hereinbefore set forth.

121,995.—VENTILATOR FOR HATS OR CAPS.—William Dale, New York, N. Y.

Claim.—A ventilator for hats or caps, composed of spiral wires interlocked, substantially as described.

121,996.—PENCIL-SHARPENER.—Samuel W. Davis and Charles P. Elliott, Norristown, Pa.

Claim.—The hollow body A, formed with the resting parts B and knives C, arranged in the space B′, between said parts, substantially as and for the purpose described.

121,997.—HAIR WEAVING AND MOUNTING APPARATUS.—Narcisse Demongeot, Washington, D. C.

Claim.—1. In combination with a weaving-stick, B, adjustable spindles D, bobbins E, and tension-springs, constructed and arranged to operate substantially as and for the purpose set forth.

2. The combination of the bobbins mounted on the weaving-stick B with a revolving head, G, ratchet *e*, pawl K, and pin L mounted on the weaving-stick A, constructed and arranged to operate substantially as and for the purpose set forth.

3. The revolving head G, provided with internal-toothed gear H and ratchet *e*, in combination with pinion I, spindle J, and pawl K, when constructed and arranged to operate substantially as described, for the purpose of mounting hair, as set forth.

121,998, antedated December 5, 1871. — MEANS FOR EXTENDING THE TABLES OF SEWING-MACHINES.—Arthur Dickinson, New York, N. Y.

Claim.—The combination of the tapering-bars *a* and *a a*, connecting-bar *c*, and sockets *o* and *o o*, all arranged as and for the purposes specified.

121,999.—BEE-HIVE. — Wriley W. Dodson, and John B. Bray, Lynnville, Tenn.

Claim.—The lever-platform D E applied to a bee-hive, as and for the purpose specified.

122,000.—STEAM-RADIATOR. — Erasmus P. Doyen, Portland, Me.

Claim.—The upright section A of a steam-radiator, cast with a continuous interior steam-space, and provided with the vertically-arranged ribs *a*, notched in diagonal rows, thereby forming a radiating surface in excess of the condensing surface, substantially as specified.

122,001.—JAPANNED FURNITURE-SPRING.—J. Joseph Eagleton, New York, N. Y.; Sarah N. Eagleton, administratrix, assignor to Eagleton Manufacturing Company, same place.

Claim.—1. The method herein described of strengthening metal springs.

2. As an improved article of manufacture, a spring made substantially as herein described.

122,002.—SAW-MILL.—David A. Edie, Norristville, Md.

Claim.—The combination of the rollers D D′, frames E E′, shafts *a a′* provided with cog-wheels *d e* and lever *f*, cranks *b b′*, and hinged pawls I I′, all constructed and arranged substantially as and for the purposes herein set forth.

122,003, antedated December 7, 1871. — GATE. — John Faussett, Leonardtown, Md.

Claim.—1. In combination with a gate mounted upon a pivot so that it can be tilted, substantially as set forth, a spring, arranged in such manner that it will be retracted when the gate is either open or closed, as described.

2. In combination with the tilting gate A and post B, the clasp C′ and spring D, substantially as set forth.

3. In combination with the tilting gate A and posts B B¹, the clasps C C′, spring D, and latch E, substantially as set forth.

122,004.—CHURN.—Wesley Fritts, Flanders, N. J.

Claim.—The combination of the vibrating frame F, which has the upper and lower cross-pieces *l n*, with the seat B, pitman *i*, and driving-shaft E, substantially as herein shown and described.

122,005.—ADVERTISING-ALBUM.—William S. Gavan, Savannah, Ga.

Claim.—1. The method, herein described, of attaching cards, sheets, or pictures to the leaves of an advertising-book by first covering said leaves, which are composed of several sheets of blotting-paper, with glazed or tinted paper; and second, embedding the cards, &c., in the surface tints formed by means of pressure applied in any suitable manner, substantially as set forth.

2. An improved advertising-book having leaves formed each of several sheets of blotting-paper, with cards, pictures, &c., embedded therein, when said leaves are bound with sheet metal stitched thereto, as specified.

122,006.—BUNG-INSERTER.—James Gillies, Glasgow, Great Britain.

Claim.—The conical, eccentric, or cam-acting key B C, constructed substantially as described.

122,007.—HARVESTER-REEL. — George S. Grier, Milford, Del.

Claim.—1. The reel-shaft B and sleeve *x*, arm D, bracket C provided with arc slot *c*, and the pulley-shaft A, constructed and arranged as shown and described, whereby the gear-wheel *b* may be adjusted without losing connection with the gear-wheel *a′*, and thus elevate and depress the reel, as specified.

2. The combination, with subject-matter of first claim, of the spring-detent E *e* and notched periphery of bracket C to lock the reel at any desired point.

122,008.—PINKING-MACHINE.—Thomas Hagerty, Richmond, Va.

Claim.—1. In a pinking-machine, a frame having a slotted feed-table adapted to rest directly on the surface of the work-table and form a clamping-jaw, substantially as described.

2. In a pinking-machine, the combination of a circular revolving cutting-blade, D, with a circular revolving anvil, B, and a spring, C, that holds them together with a yielding pressure, substantially as described, for the purposes specified.

3. The combination of the revolving cutting-blade D, anvil B, and spring C with the eccentric-headed lever F, a frame for supporting said parts, and a crank for operating the wheels, substantially as described, for the purposes specified.

4. As an improved article of manufacture the pinking cutter-blade D, made by the process herein described.

5. The process of manufacturing the blades D, substantially as described.

122,009.—COMBINED FRICTION AND RATCHET CLUTCH. — Abijah Whitney Hall, Northfield, Vt.

Claim.—The clutch C provided with a conical head and with lugs or ratchet-teeth E, in combination with the conical inner surface of the rim of the pulley B, and with the lugs or ratchet-teeth D attached to said rim, substantially as herein shown and described, to adapt the clutch to serve both as a friction and as a ratchet-clutch, as set forth.

122,010.—STEAM-BOILER CASING AND FURNACE.—William P. Hall, Piqua, Ohio.

Claim.—1. The horizontal return-flue boiler A within the casing B, with a hot-air space between all sides and ends of the boiler and the casing to allow the heats to entirely envelop the boiler, substantially as set forth.

2. The combination, with the casing B, boiler A, and surrounding chamber, of the end walls E E′, provided with inner recesses *a a′* of a diameter larger than that of the boiler, substantially as and for the purposes herein set forth.

3. The combination, with the casting B and its elongated chamber, of the boiler A and the notched or perforated supports C between the boiler and bottom of the chamber, substantially as and for the purposes herein set forth.

4. The combination of the furnace D, air-chamber *b* with apertures *i i*, exterior air-receiver I, and tubes *d e*, all constructed and arranged substantially as and for the purposes herein set forth.

122,011.—KEEPER FOR DOOR-LATCHES.—William Harvey, Albany, N. Y.

Claim.—The arrangement of the sliding latch-catch C, provided with the supports *a a*, and rendered elastic by the springs D D within the recess A′ of the body A of the keeper, and between the said body of the keeper and the wear-plate B, whereby the said sliding latch-catch will be held in place and supported from contact with the wood and have an elastic movement, substantially as and for the purpose set forth.

122,012.—DENTAL FORCEPS.—Leonard George Haskins, Newport, N. Y.

Claim.—1. The reversible jaws C and D, in com-

bination with the handles A and B, substantially as and for the purposes described.

2. In a forceps with reversible or detachable jaws, the pins J and holes *k*, substantially as and for the purposes described.

3. The jaws C and D, with the pivot-hole *f* therein, halved together, as shown and described, for the purposes set forth.

4. The pivot-bolt *g*, in combination with the jaws C and D.

5. The plates A, pins J, and holes *f*, in combination with the handles A and B, substantially as and for the purposes described.

122,013. — HASP-LOCK.—William D. Heister, Newton Hamilton, Pa.

Claim.—The bolt C having slot C′, and secured to plate B by means of the staple *a*, in combination with the pins *b b* and hasp F, substantially as and for the purpose set forth.

122,014. — PROJECTILE. — J. Henry Helm, Pittsburg, Pa.

Claim.—The combination of the projectile, the metallic supporting-ring, and the elastic sabot, as set forth.

122,015. — MOLDING TELEGRAPH-INSULATOR. — Robert Hemingray, Covington, Ky.

Claim.—1. The mode or process of forming the cavity in telegraph-insulators by first forming the unthreaded wider portion of the cavity by a threadless plunger, and, while the glass is yet hot, forming the threaded deeper portion by means of a screw-threaded plunger or mandrel, substantially as set forth.

2. The described combination, with the mandrel F, of the collar or sleeve I, whether yielding or otherwise.

3. In the described combination with the mandrel F, the spring H, for the purpose designated.

122,016.—CASTER FOR FURNITURE.—Samuel S. Hickock, Methuen, Mass.

Claim.—The combination in a caster, such as described, with the rod or journal D and wheel-supporting block B of the removable pin *d*, substantially as and for the purposes shown and set forth.

122,017. — HUSK-SPLITTER.—Berry Hollis, Randolph, Ill.

Claim.—The within-described corn-husk splitter, consisting of the frame A, rollers B B, endless apron C, roller or cylinder D, concave E, sharp-pointed hook-teeth *a a* and *a′ a′*, and the cover G, all constructed and arranged substantially as and for the purposes herein set forth.

122,018, antedated December 9, 1871.—ABRASIVE PAPER-HOLDER. — George A. Howe, Niles, Mich.

Claim.—The combination of the metallic strip or spring A with the buff B, substantially as and for the purpose above set forth.

122,019.—SECTIONAL STEAM-GENERATOR.—Dewitt C. Howell, Goshen, N. Y.

Claim.—1. The two sets of inclined steam-generating tubes A crossing each other, combined, as described, with opposite chambers D, connected at top and bottom by return-tubes E, so that the same water will alternately pass through the two sets of generating-tubes and be kept in continual circulation until converted into steam.

2. The upper chambers D D, combined, as described, with ascending pipes G and descending pipes E to allow the vaporized and unvaporized water to be separated and conveyed to their respective destinations.

122,020. — COW-BELL STRAP. — Joseph H. Hughs and Absalom Hughs, Wautoma, Wis.

Claim.—The two hinged metal strips A B overlapping at the sides, and provided with slot and staple respectively thereon, to form an easily-fastened and detachable strap for cow-bells.

122,021.—LINE-CONNECTOR.—Charles Jarvis, New York, N. Y.

Claim.—The arrangement of the block with holes at each end, and a projecting pin at one end of the same, and two cars at one side of the block, between which is inserted a bar secured by a pin, and to be used for the purpose of securing ropes and lines, substantially in the manner set forth.

122,022.—CHIMNEY-CAP.—Anson B. Johnson, Washington, Ind.

Claim.—The frame *a*, standing on the overhanging course *c* and inclosing the top courses, in combination with the plate *f* superimposed upon the chimney-top and provided with a molding, *g*, that incloses the frame, all arranged as specified.

122,023.—PAPER FOR PACKING.—Albert L. Jones, New York, N. Y.

Claim.—As a new and improved article of manufacture, the corrugated packing A, substantially as described.

122,024.—COAL-GAS APPARATUS.—Edward Jones, Boston, Mass.

Claim.—A receptacle, *e*, containing water, provided with one or more openings, *f*, attached to or made in one piece with a gas-retort lid, for the purpose as herein fully set forth and described.

122,025.—APPARATUS FOR THE MANUFACTURE OF GAS.—Edward Jones, Boston, Mass.

Claim.—A receptacle, *d*, cast onto, attached, or connected to a stand-pipe or mouth-piece for gas apparatus, provided with one or more openings, *e e e*, said receptacle *d* surrounding the stand-pipe or mouth-piece wholly or in part, for the purpose as herein fully set forth and described.

122,026.—CHURN.—John A. Jordan, Shelbyville, Tenn.

Claim.—The revolving semicircular or trough-shaped beaters *j* formed of sheet metal, in combination with the perforated stationary plate *p* provided with raised edge or band, as shown and described.

122,027. — STEAM-GENERATOR.—John Joseph Jordan, Philadelphia, Pa., assignor to himself and George T. Carter, same place.

Claim.—1. A circulator, consisting of a series of parallel tubes communicating with each other and with the boiler, and arranged in the form of an arch between the boiler and fire-place, substantially as set forth.

2. The cast-iron head E of the body, chambered as described, and having apertures communicating with the interior of the body, as set forth.

3. The casing I at the rear of the boiler communicating with the body and with the two lowermost tubes *p* of the circulator, as set forth.

4. The depression *m* of the said casing I, for the purpose specified.

5. The arched brick-work H, arranged within the arched tubular circulator, between the fire-place and the rear of the boiler, so as to cause the products of combustion to impinge upon both the tubes and body of the boiler.

6. The arched pieces B and D, with and within which are cast bends *t′*, adapted to tubes, as set forth.

122,028.—FEED DEVICE FOR HULLING-MACHINES.—David Kahnweiler, New York, N. Y.

Claim.—1. In combination with a hulling-machine, the feeder N provided with the partition P, constructed substantially as and for the purposes described.

2. In combination with the hopper, the feeder N with partitions P, constructed as described, and either with or without the cylinder C, for excluding sticks, nails, stones, &c., substantially as described.

122,029.—PROCESS FOR PREPARING GOLD FOR DENTAL PURPOSES. — Edward G. Kearsing and Leonzo Kearsing, Spring Valley, N. Y.

Claim.—1. The process of surface-roughening gold-foil, to prevent two or more sheets thereof from consolidating when brought together, by heating and shrinking it between paper, as described.

2. As an article of manufacture for dentists' use, a block of gold-foil formed of a series of previously surface-roughened and annealed sheets superposed upon one another, as described.

122,030. — MOCCASIN BOOT AND SHOE.—Patrick Kelleher and James C. Randlett, Bangor, Me.

Claim.—1. A moccasin boot or boot-pack formed of the parts A B C D E, cut as shown and described, and joined together by flat lap-seams.

2. A moccasin boot or pack with the leg formed of two pieces, A and B, united by two lapped seams, one on each side of the leg, as shown and described.

3. The quarter C of a moccasin-pack, cut in the form shown and described, and formed entire in one piece, for use as specified.

4. A shoe-pack with a quarter cut in the form shown in Fig. 9, and formed in one piece, and running around the heel and forward to the vamp H, as specified.

5. The combination, in a shoe-pack of the parts F, G, H, and E, such parts being united together by flat lap-seams.

122,031. — NEEDLE-ELECTRODE FOR ELECTRO-SURGICAL USES. — Jerome Kidder, New York, N. Y.

Claim.—1. A needle-electrode having its shank of less transverse dimensions than its tip, and its insulating-cover applied to the shank so as not to project laterally beyond the tip at the junction or approximate position of the tip and cover, substantially as specified.

2. The needle-electrode formed with an eye, *c*, at the outer end of the shank, substantially as and for the purposes herein set forth.

3. A needle-electrode with a rounded point, essentially as described.

4. A needle-electrode for electro-surgical uses composed of a tip, *c*, formed with a rounded point, a reduced shank, *b*, having an eye, *c*, at its outer end, and an insulating-cover, *d*, arranged so as not to project laterally beyond the tip, substantially as shown and described.

122,032.—APPARATUS FOR DISTILLING SPIRITS. — Gott-Hard Kleiner, Georgetown, Mo.

Claim.—The chambers A B C D, condenser E, and analyzers F G H, combined, arranged, and provided with the pipes, stops, and valves described, for the purpose of distilling and separating the product while in the worm, as set forth.

122,033.—ROTARY ENGINE. — Truckson S. La France, Elmira, N. Y.

Claim.—In rotary engines, where toothed and meshing-wheels are employed, the packings C let into the case at intervals thereabout, and having the channels E behind them, as and for the purpose set forth.

122,034.—CIGAR-MOLD. — John James Lahaye and James M. Lyons, Reading, Pa.

Claim.—1. A combined mold, cutter, and drying retainer for cigars, consisting of two hinged and overlapping-jaws A and A′, substantially as described.

2. The combination of the jaw A′ and the jaw A, fitting for a part of its length within the jaw A, and having at its outer end an overlapping lip or knife, *d*, as set forth.

3. The combination, substantially as described, of the jaw A with the lugs *e e* of the jaw A′.

122,035. — COAL-MINING TOOL. — Isaac Lamplugh, Peoria, Ill.

Claim.—1. The bar D clamped to the adjustable post B, and notched at its outer end for supporting a swinging drill-holder with drill or drills, substantially as and for the purposes set forth.

2. The holder D′ provided with a removable handle, E, and removable mining-tool, G, and suspended by means of a chain, *e*, from the notched bar D, substantially as and for the purposes herein set forth.

122,036. — LIFTING-JACK FOR DUMPING-CARTS.—Robert B. Little, Providence, R. I., assignor to Henry Blundell, agent, same place.

Claim.—The improved lifting-jack for dumping-carts herein described, consisting of the screw-spindle, gear-nut, and crank-gear, combined and arranged within the gear-casing D and spindle-casing F, substantially as described.

122,037, antedated December 16, 1871.—CORNICE FOR WINDOW-CURTAINS.—William Lloyd, New York, N. Y., assignor to Gibbons L. Kelty, same place.

Claim.—The cornice for a window-curtain, made with an ornament fitted to slide upon the continuous molding forming the body of said cornice, substantially as set forth, and in combination therewith the detachable end ornaments made with recesses to receive the ends of the moldings *a*, as specified.

122,038. — ADJUSTABLE AND DETACHABLE STRAP FOR GARMENTS.—Henry C. Lockwood, Baltimore, Md.

Claim.—The elastic waist-strap for pantaloons, herein described, consisting of the elastic pieces B, the triangular buckle-straps C, and attaching button-holed tabs, substantially as specified.

122,039.—HORSE HAY-RAKE. — J. George Lockwood, West Davenport, N. Y.

Claim.—The crank-rod I i^1 i^2 i^3, rigid arm J, spring K, connecting-rod L, pivoted bar M *m*, and rigid bar N, in combination with the axle and shafts or frame of the rake, substantially as herein shown and described, and for the purpose set forth.

122,040.—UTERINE SUPPORTER. — Alexander Lowe, Nashville, Tenn.

Claim.—The supporter, consisting of the perforated cup A and the oval arched supports D D, all from a single piece of soft rubber, as shown and described.

122,041.—POSTAL-CARD. — Washington I. Ludlow, Cleveland, Ohio.

Claim.—1. A postal-card folded at or near its center, with the edges gummed, substantially as and for the purpose herein described.

2. As a new article of manufacture, a postal-card folded at or near its center and gummed upon its inside edge, the ends of the said card being left open, as herein set forth.

122,042. — Steam-Generator and Feed-Water Heater. — Mirabeau N. Lynn, New Albany, Ind.

Claim.—1. The inclined pipes of a steam-generator connected to the vertical pipes by flattening the said vertical pipes around the orifices and screwing said inclined pipes into the orifices so that the indented surfaces and inclined pipes are at right angles to each other, substantially as and for the purposes set forth.

2. The protecting-plates H I arranged between the upright pipes A A′ and the casing J K of a steam-generator for protecting the walls of the casing, substantially as and for the purposes set forth.

3. The hollow three-sided casing J and the casing K provided with the shelves *f* arranged around the exterior of the upright pipes A A′, and connected by the elbow-pipes L L′, substantially as and for the purposes set forth.

4. The combination of the casings J K, shelves *f f*, connecting-pipes L L′, feed-water inlet M, exhaust-steam inlet N, and outlet O, all constructed and arranged substantially as and for the purposes herein set forth.

5. The combination of the upright pipes A A′, cross-pipes B B, steam-drum C, base-box D, inclined pipes E E with interior pipes *d d*, outside pipes G G, protecting-plates H I, and casing J K with its pipes, all constructed and arranged substantially as and for the purposes herein set forth.

122,043. — Clothes-Drier. — William C. Maynard, Marathon, N. Y.

Claim.—The improved clothes-drier herein described, consisting of the base-plate D provided with the spindles *a*, top-plate G, and bars E, mounted upon the bracket A and pivoted thereto, all substantially as and for the purpose described.

122,044.—Implement for Embossing Fabrics.—James W. McKee, Brooklyn, E. D., N. Y.

Claim.—The improved implement for embossing, consisting of two cross-levers, A B, and a male and female die, C D, secured to respective outer ends of the said levers, the said dies carrying, respectively, sunken and raised figures, patterns, monograms, or other designs, the said parts being combined and operating substantially as and for the purposes herein specified.

122,045.—Machine for Forming Scale-Pans.—Frederick Meyer, Newark, N. J.

Claim.—1. In combination with revolving forming-rolls of a rolling-machine, a fixed forming-die, located and operating substantially as described.

2. A die, J, shaped to correspond to the shape of the rollers of a rolling-machine, and located between the rolls in such a manner as to fill the space between the three rolls so as to allow a piece of sheet metal to be passed between the rolls, as described.

122,046.—Propulsion of Vessels.—Charles Mickle, Guelph, Canada.

Claim.—1. The combination of the frames E and G, arranged substantially as described, and for the purposes set forth.

2. The combination of the floats D with the frames E and G, substantially as and for the purpose described.

3. The reversing gear, consisting of the racks T, pinions U, wheels *y*, screws W, worm V′, and sliding shaft X, arranged to operate on the frame E, substantially as and for the purposes described.

4. The frame E, in combination with a reversing apparatus and with reciprocating floats D, substantially as and for the purpose described.

122,047.—Pen and Pencil Case.—Joseph Monaghan, New York, and Thomas Flynn, Brooklyn, N. Y., assignors to Joseph Monaghan.

Claim.—The combination of the tubes E and F, provided with slots, as described, and extension piece G within the case A, all constructed, arranged, and operating substantially as set forth.

122,048. — Bed-Bottom. — Thomas H. B. Morehouse, Lansing, Mich.

Claim.—The within-described bed-bottom, composed of the end pieces A A, the slats C C, and the rubber webbing B B, secured by the grooves and pins *a*, and the slats nailed or screwed to the webbing by the nails or pins *x x*, all as shown and described.

122,049.—Steam-Engine.—Francis Motley, Phœnixville, Pa., assignor, by mesne assignments, to James R. Teal, same place.

Claim.—1. The secondary slide-valve I, arranged within a steam-chest, in connection with the main slide-valve D, to operate substantially as herein shown and described.

2. The cylinders F and G, secured to a steam-cylinder, and containing the pistons E H, which control the positions of the valves D and I, substantially as herein shown and described.

3. The three pairs of channels, *m n*, *o p*, and *s y*, arranged between the steam-chest and the cylinders A, G, and F, respectively, as specified.

122,050.—Fire-Place Grate.—David Pangle, Belmont, Ohio.

Claim.—The fire-place herein described, provided with the corrugated inclined radiator H, the rising front bars B, the fixed supporting-grate D‴ having longitudinal bars, and the cross-barred slide-grate *d‴*, longitudinally vibrated by the lever E, substantially as specified.

122,051.—Meat-Chopper.—William P. Patton, Harrisburg, Pa., assignor of one-half his right to James R. Piper, same place.

Claim.—1. The construction of the frame-piece A *a* with the rule-joint herein shown and described, and for the purpose specified.

2. In a meat-chopper, the yoke-pitman *e e*, when it is constructed and combined with the shaft C, block V, connecting-pin 1, crank-wheel *b*, shaft *d*, frame-piece *a*, and crank G, so as to operate the shaft C vertically, as herein described.

3. The combination of the shaft C and knife *c* with the hinged frame A *a*, ratchet-wheel D, block V, pawl *m*, yoke-pitman *e*, crank-wheel *b*, and its shaft *d*, to give an axial rotative motion to the knife-shaft C, substantially as shown, and for the purpose specified.

4. The combination of the base-ring F, frame A *a*, crank-wheel *b*, shaft *d*, yoke-pitman *e*, arch-piece *r*, and pawl *m* with the ratchet-wheel D, block V, shaft C, and oscillating knife *c*, substantially as and for the purpose set forth.

122,052.—Plant for the Manufacture of Bessemer Steel. — John B. Pearse, Swatara township, Pa.

Claim.—1. The combination, with a Bessemer plant as heretofore constructed, of the apparatus herein described or its equivalent, arranged in a separate place or places designed for their reception beyond the vicinity of the converters in use, and used solely for the repairing of damaged converters which are conveyed to and taken from such place or places, substantially in the manner specified.

2. The combination, with a Bessemer plant as heretofore constructed, of a crane so arranged as to command the whole plant and all the machinery therein contained, and so placed as to easily transfer the converters from the repair place to that in which steel is made, substantially as and for the purposes set forth.

3. The combination, with a Bessemer plant as heretofore constructed, of a crane and a heavy car so arranged that the crane may set the damaged converters on said car, which shall transport them to a suitable repair place separate from the main building, substantially as and for the purposes set forth.

4. The combination of a railroad track, a car, and a ladle with the cupolas of a Bessemer plant as heretofore constructed, substantially as and for the purposes set forth.

122,053. — Steam-Boiler Float-Valve.—John Peters, Haverstraw, N. Y.

Claim.—1. The combination of the float F, arm *d*, and screw-stem C with the valve B, case A, and alarm instrument E, all arranged substantially as herein shown and described.

2. The combination of float F, arm *d*, screw-stem C, valve B, and case A, substantially as shown and described.

122,054.—Flour-Bolt.—Herman N. Petersen, Peoria, Ill.

Claim.—1. The head A, adjustable sliding hub E, and spokes *h*, in combination with the cap D, screw-rods *g*, and shaft B, substantially as set forth.

2. The ribs C, provided with set-screws *i* for stretching the cloth latitudinally, in combination with the heads A of a flour-bolt, constructed and arranged to operate substantially as set forth.

3. A circular flour-bolt, consisting of heads A A′ and stretcher F, ribs C with set-screws *i*, shaft B, provided with adjustable sliding hubs E having spokes *h* for supporting the heads, and connecting with caps D on the ends of the shaft by screw-rods *g*, by which the said hubs are made adjustable for stretching the cloth, substantially as shown and set forth.

122,055. — Lightning-Rod. — Myron D. Phelps, Bristolville, Ohio.

Claim.—A lightning-rod composed of a straight copper core surrounded by three or more twisted wires, substantially as and for the purposes herein set forth.

122,056. — Shutter-Worker. — Joseph T. Pope, Scranton, Pa.

Claim.—The combination of blind *a*, cord *b*, arm *c*, tail-piece *d*, recessed hinge, provided with a counter spring, and conductor *f*, all arranged as specified.

122,057. — Cotton-Chopper. — Ashley G. Powell, Smithfield, N. C.

Claim.—The combination, with a chopping-knife on the arm G, of a shaft, H, journaled in brackets I I, and having spring-finger *k* and a ratchet-wheel, J, on the driving-shaft of the machine, as and for the purpose set forth.

122,058. — Spark-Arrester. — David R. Proctor, Gloucester, Mass.

Claim.—1. The combination of a smoke-stack and a spark-and-cinder discharge-pipe, B, having perforations *b*, with a spray-pipe, C, connected with the boiler, as and for the purpose set forth.

2. A smoke-stack having curve A^1, oblique screen A^2, and oblique aperture a^3, combined with pipe B, arranged to discharge the sparks and cinders therefrom, in the manner described.

122,059. — Automatic Double Puppet-Valve.—John E. Prunty, Baltimore, Md.

Claim.—1. The cylindrical discharge-pipe A with its ports *b* and *b′*, and double attachments *f f*, substantially in the manner and for the purpose shown and described.

2. The double puppet-valve chamber B, in combination with cylinder A, ports *b b′*, attachments *f f*, substantially as and for the purpose described.

3. The double puppet-valves C C′, their valve-seats *d d′*, in combination with cylinder A and valve-chamber B, substantially as shown and described.

4. In combination with cylinder A, chamber B, valves C C′, seats *d d′*, stem *e*, set-screw E, and eduction-pipe D, all arranged, constructed, and operating in the manner and for the purpose set forth.

122,060. — Vault-Cover Lock. — Andrew Richardson, New Brunswick, N. J.

Claim.—The pivoted catches C D H and F G, constructed and applied to a vault-cover, A B E, as and for the purpose described.

122,061. — Latch for Gates.—Henry W. Robie, Binghamton, N. Y.

Claim.—The combination of shell B, recessed bolt A, spring D, vertical latch-rod C provided with the beveled end *e*, shoulder *g*, and knob E with the divided rose F, substantially as set forth.

122,062. — Harvester. — John L. Rohrer, Upper Leacock, Pa., and Charles E. Roper, Canton, Ohio; said Roper assignor to E. Ball & Company, Canton, Ohio.

Claim.—1. The combination of the lever F, shaft *a*, guide G, and shipper-arm *c* with the sliding-pinion D for the purpose of throwing the cutters into or out of action, and so holding them, as described and represented.

2. The combination of the braces *f*, bar *i*, and sleeve or socket G with the point of the axle or center motion of the main drive-wheel for making a journal-support for the gear K, as and for the purpose described and represented.

3. The combination of the gear N and disk S with the spring-bolt, by which they are connected and disconnected, at pleasure, and with their bosses or hubs *q v* and cam-ways R X, so that the rake may revolve with the reels, or remain stationary while the reels continue to run, substantially as described and represented.

4. The combination of the cam-protecting surface *y* with the spring-bolt *h* and lever *g*, so that said lever cannot reach said bolt except when it is designed to do so, and by pressure upon the foot-lever, as described and represented.

122,063. — Top-Joint and its Connections.—Cyrus W. Saladee, St. Catharines, Canada.

Claim.—1. Forming the end or ends of the joint-irons to carriage-tops in such manner that they shall serve the purpose and take the place of the "top-props" as now generally known and used.

2. Forming the end or ends of the joint-irons to carriage tops to serve the purpose of the ordinary top-props, and passing the same through or past the bow of the top in such manner that they will admit the end of the iron to rotate in that position when raising and lowering the top.

3. Turning the end or ends of the joint-irons to carriage-tops in toward the top at right angles with the main joint-iron, and securing the turned end to a fixed plate upon the bow of the top in such form as to make a joint at this connection and allow the end of the joint-iron to rotate in or upon said plate when raising or lowering the top.

4. The combination of the lower end of the long joint-iron to carriage-tops with the end cap P^2 of the seat-prop S, Fig. 4, Sheet 1, in any equivalent manner, substantially as and for the purpose set forth.

5. A seat-prop S, Fig. 4, Sheet 1, provided with the shoulder R against which to stop and rest the inner cap P of the bow-rest P^1, as and for the purpose set forth.

6. The thimble B^1, Fig. 1, Sheet 1, for the reception of the bolt end B of the joint-iron A, and securing the end of the bolt B in or upon a fixed plate upon the bow of the top, or passing it through the bow, as shown by this figure, and for the purpose described.

7. Forming a socket, B^1, Fig. 7, Sheet 1, to receive the end of the joint-iron A, solid, with the bolt B, and securing the inner end of the latter to a fixed plate upon the bow, or passing it through the bow in any practical manner that will admit of the bolt revolving in its bearing when raising or lowering the top.

8. Extending the upper joint-iron X^1, Figs. 2 and 3, Sheet 3, so as to form a joint, X^2, between the third and back bows of the top, substantially as shown and described.

9. Securing and operating the joint-irons A and A, Fig. 1, Sheet 3, and Figs. 1 and 2, Sheet 5, upon the bow of the top on two separate bearings or "props," 1 and 2, and independent of each other.

10. A double knuckle-joint, (see Sheet 4,) constructed and operating substantially as shown and described.

11. In double knuckle-joints, the intermediate brace B. (See Sheet 4.)

12. In double knuckle-joints, the face-plate C, Figs. 6, 7, and 8, Sheet 4, having the intermediate brace B and the pivots D formed thereupon, as and for the purpose set forth.

13. A double knuckle-joint, Figs. 1, 2, and 3, Sheet 4, made round or oval in the body of the joint so as to present a perfectly smooth and uniform surface throughout, as and for the purpose set forth.

14. In combination with the device claimed in the first seven claims, or either of them, the use of elastic or rubber washers to keep the parts closely fitted when that is requisite, and to prevent rattling.

15. The socket B^1, Fig. 1, Sheet 5, in combination with the bent bolt or prop B and the end of the joint-iron A, as and for the purpose shown and described.

16. A top-joint, C, Fig. 1, Sheet 6, provided with short arms A^1, sockets B^1, in combination with the intermediate wrought-iron or steel arms A, substantially as and for the purpose set forth.

17. Rigidly connecting the outer ends of joint-irons for carriage-tops by welding or otherwise to the bolt or "prop" B, Figs. 1 and 3, Sheet 6, and so that the inner end of the bolt or prop B shall partially revolve in its bearing in or upon the bow of the top when raising or lowering the same.

122,064. — Apparatus for Sharpening Harvester-Knives.—Isaac C. Saunder, Trenton, Mich.

Claim.—The bench A *a d*, spring-clamps C C and rests D D, when all are combined to hold the cutter-bar and to allow the sharpener to be operated, in the manner described.

122,065, antedated December 2, 1871.—Medical Compound of Vegetable Alkaloids.—George W. Scollay, New York, N. Y.

Claim.—1. The chemical compound consisting of the sulphite or bisulphite of the vegetable alkaloids, or their equivalents.

2. The chemical compound consisting of the carbolated sulphite or bisulphite of vegetable alkaloids, or of any of the alkalies.

3. The chemical compound consisting of the carbolated sulphite or bisulphite of vegetable alkaloids, or of any of the alkalies, combined with camphor or other resinous substance, gums, or the essential oils.

122,066.—Swing for Children.—William H. Scriven and William K. Taylor, Flatbush, N. Y.

Claim. — The slotted or hooked bars B' B'', in combination with the straps N N, vertical sections 1 2 3 4 and $1'$ $2'$ $3'$ $4'$, bars B, and suspending-ropes *e*, all arranged and operating in the manner and for the purpose set forth.

122,067. — Flood-Fence.—James L. Seat, Nashville, Tenn.

Claim.—1. The combination of the two series of pickets A A', arranged as described and shown, and connected together by means of the rod *a* and nuts *b b*, substantially as herein set forth.

2. The combination of the pickets A A and A' A', bars B B', rod *a*, posts C C, braces D D, staples or stirrups *d d*, and the stakes *e e*, all constructed and arranged substantially as and for the purposes herein set forth.

122,068. — Sash-Holder.—Raphael Moreno Soldia, New York, N. Y., assignor to himself and John H. Trusty, same place, assignors to John H. Trusty.

Claim.—The rubber rollers *e e*, mashes B C, and strips *g g*, of sheet metal, struck up to form corrugations, all arranged and operating as shown and described.

122,069.—Car-Axle Box.—Milton Sessions and David Muzzey, St. Albans, Vt.

Claim. — The box A with semicircular projections D, bearing-block C with semicircular recess within which fits the projection D, which is provided with a central oil-passage, *a*, in combination with the reservoir E and oil-channel G, all substantially as set forth.

122,070. — Car-Coupling. — William H. Skidmore, Secor, Ill.

Claim. — 1. The car-coupling herein described, consisting of the draw-head A, the hooks B, the guides C, the braces *u v w*, the parts *s c*, and the lifting device M *n n'*, all constructed, arranged, and connected, substantially as and for the purposes herein set forth.

2. The combination of the brace *u*, the brace *w*, the guide C, the block *c*, the bolts *b d f*, and the draw-head A, all constructed and connected, as herein described and shown.

122,071.—Clothes-Drier. — William A. Sleppy, Berwick, Pa.

Claim.—The hub C', in combination with the arms E', F, and E, cords G, and enlarged base B, constructed and arranged to operate substantially as specified.

122,072. — Machine for Making Porcelain Knobs, &c. — Thomas J. Sloan, Bronxville, assignor to James L. Jensen, Green Point, N. Y.

Claim.—1. The opening and closing dies or divided mold E E, provided with automatic discharges I I for detaching the molded knob or article from the sides of the mold on the opening of the latter, substantially as specified.

2. The false bottom G, in combination with the divided mold E E and plunger D, arranged to remain stationary during the compressing action of the plunger till toward its close, and then to move in a reverse direction to the plunger to complete the compression from opposite ends or sides, essentially as and for the purpose herein set forth.

3. The core-pin H, arranged for operation within the divided mold, and supported by a laterally-moving piece or bar, P, operating to take said pin out of the mold when open, whereby the core-pin is also made to act as a carrier to convey the molded article away from the mold, substantially as specified.

4. The combination of the opening and closing dies E E, the rising and falling plunger D, and the temporarily-moving or compressing false bottom G, substantially as described.

5. The revolving brush J, arranged to operate within the divided mold E E for cleaning the latter, essentially as specified.

6. The revolving cutter F', in combination with the knob-holders C' E', arranged to center and hold the knob from turning, substantially as described.

7. The rising and falling knob-holder C' and yielding upper holder E', in combination with the revolving cutter F', whereby the turning is finished when the knob has moved up, essentially as described.

122,073.—Not issued.

122,074.—Axle for Vehicles. — William H. Sparks, Absecom, assignor to himself and James D. Souder, Williamstown, N. J.

Claim.—The conical enlargement B' at each end of the axle A, in combination with the enlargement C' of the sleeve C, for increasing the strength of the diminished parts B of the axle, substantially as described.

122,075. — Churn-Dasher. — Andrew T. Still, Baldwin City, Kan.

Claim.—The combination of the adjustable radial arms D and inclined tapering tubes E with the pivoted dasher handle A, substantially as herein shown and described, and for the purpose set forth.

122,076.—Mold for Sewer-Pipes.—William H. Story, Flatbush, N. Y.

Claim.—The combination of the core *b* and ring *d* with the case *c*, constructed as described to form the irregularly-shaped band, as shown, for the purpose herein set forth.

122,077.—Wash-Boiler.—David P. Sulouff, Milton, Pa.

Claim.—The boiler A having vessel B on top, in combination with the flanged stand D d^1, having clothes-supports d^2, diaphragm d^3, and hooded tubes *d*, all arranged as and for the purpose set forth.

122,078, antedated December 9, 1871. — Hold-Back Attachment to Vehicles.—James Thornton and Emmit G. Latta, Genesee, N. Y.

Claim.—The open hook *a* and the socket B, with a cross-bar, *b*, said hook and socket being adapted to each other, substantially as herein shown and described, and forming, in connection with a spring, *c*, an improved hold-back attachment, for the purpose set forth.

122,079.—Connecting Carriage-Springs. John A. Topliff and George H. Ely, Elyria, Ohio.

Claim.—The arms C C C' C', arranged upon separate rock-rods B B', secured directly to the front and rear axles to cause both ends of each spring to yield simultaneously and in unison with each other, and also to be laterally braced by said rock-rods, as described.

122,080.—Bee-Hive. — Joseph Tritt, New Richmond, Ohio.

Claim.—1. The comb-frames constructed specifically as described, with the grooved recess and pin, in combination with the bent-wire slide, the series of staples, and the recesses for the pin, as set forth.

2. The combination of the sliding doors E E with each other and the hive, one being adapted to cover the other, as set forth.

122,081. — Corset and Skirt-Supporter Combined. — Mary J. C. Vanorstrand, Pekin, Ill.

Claim.—The adjustable elastic strap *i* for connecting the front and back A B of the corset, substantially as and for the purpose set forth.

122,082.—Pump-Piston.—John Van Tassel, Toledo, Ohio.

Claim.—The solid metal piston-head, constructed as herein shown and described, consisting of the recessed part and follower with the alternate rings of different sizes of metal and rubber, or other suitable elastic material, clamped between them by means of the screw and nuts on the end of the piston-rod.

122,083.—Grinder for Harvester-Knives. Phineas W. Vaughan, De Kalb, Ill.

Claim.—1. The rectangular frame H H' H'' H''', made adjustable by means of slots N, tenons *a*, and rods J, and provided with notches I I, as and for the purpose set forth.

2. The combination of the adjustable frame H H' H'' H''', bed A, stone E, and gearing R W, substantially as described and shown.

122,084. — Reservoir-Stove. — Jacob V. Vrooman and Jonas H. Clute, Schenectady, N. Y.

Claim.—Within the combustion-chamber of a fuel-magazine stove or furnace, the combination of two vertical flue-strips, *c c*, and a register or sliding damper, D, with or without intermediate vertical flue-strips *c' c'*, substantially as herein shown and set forth.

122,085.—Boot and Shoe.—Preston Ware, Jr., Boston, Mass.

Claim.—The cushion A, made as herein described, and arranged in relation to the cork or double sole B, stitched-welt C, and outer sole D, substantially in the manner set forth.

122,086.—Steam-Trap.—Joseph E. Watts, Lawrence, Mass.

Claim.—1. The combination, in a steam-trap, of the valve with its operating expansible rod connected with the same, substantially in the manner shown and described, and for the purposes stated.

2. The combination, with the case A, the valve-seat D, the valve G, and valve-stem *a'* of the tubular piece *k* located in the valve-chamber and surrounding the valve-stem, as and for the purposes shown and described.

3. The combination in a steam-trap, with the valve G and expansible rod, connected substantially as described, of the valve-stem *a'* and spring J, operating substantially as herein shown and set forth.

4. The combination of case A, expansible rod B, valve G, valve-stem *a'*, tubular piece *k*, spring J, and nut I, said parts being constructed and arranged for joint operation in the manner shown and set forth.

122,087.—Plow-Fender.—Alanson P. Webber, Saratoga township, Ill.

Claim.—A plow-fender, consisting of the rod C provided with the convex shovel D, roller E, and either with or without block *d*, when adjustable vertically by means of the eye or staple-bolts *a*, and attached to the plow-beam forward of the plow, substantially as described.

122,088.—Hinge.—William T. Wells, Decatur, Ill.

Claim.—A sheet-metal T or strap hinge with the ends of both the straps, or strap and leaf, extending around and beyond the pintle, and secured by rivets or by the screws, nails, or bolts with which the hinge is put on, all as shown and described.

122,089.—Wash-Bowl.—William Westlake, Chicago, Ill.

Claim. — As a new article of manufacture, a wash-basin having its body composed of tin, with a thin sheet of non-corrosive metal soldered over the inner surface of its bottom, substantially as described.

122,090. — Fagot for Metal Bars. — Elbridge Wheeler, Philadelphia, Pa.

Claim.—1. A pile composed partly of iron and partly of one or more steel bars or fagots clothed with iron, as set forth.

2. As an improved manufacture, a bar rolled from the said pile.

122,091. — Glove. — Edwin V. Whitaker, Gloversville, N. Y.

Claim.—The glove herein described, having its back and palm pieces *a* and *b* cut with the straight and curved edges, as shown, for the purpose specified.

122,092.—Soldering-Iron.—Joseph Williams, Jefferson, Tex.

Claim.—1. The cap H with its cone-shaped end I and shield J arranged on the soldering-iron to act as a heating-chamber for the same, as described.

2. In combination with the cap H, constructed substantially as described, and the soldering-iron, the burner *g*, tubes F G, and reservoir D, operating as described.

3. In combination with the cap H, the soldering-iron, burner *g*, and tube G, the loop *e*, plate *d*, and handle M, as described.

4. In combination with the burner *g* and tubes F G, the reservoir D on its stem C, with springs *a a*, and adjustable in the tube B, as described.

5. In combination, with the cap H, tube G, loop *e*, and the soldering-iron, the hook N and metal rim O, operating as described.

122,093.—Washing-Machine.—Joseph B. Wilson, Philadelphia, assignor to himself, Fisher Hazard, Manch Chunk, and Samuel B. Huey, Philadelphia, Pa.

Claim.—The combination of the annular trough with the shaft B and wheels E and E′, caused to traverse the annular paths described, and capable of vertical movement, all substantially as set forth.

122,094.—Fluid for Extracting Grease from Fabrics.—Joseph B. Wilson, Philadelphia, assignor to himself, Fisher Hazard, Manch Chunk, and Samuel B. Huey, Philadelphia, Pa.

Claim.—An oil or grease extracting fluid, composed of the materials and in the manner and proportions substantially as described.

122,095.—Connecting-Rod.—John W. Zinn, Morrison's Mills, Fla.

Claim.—1. The combination of the yokes F, abutment-plate G, clamp-screw H, and back plate I with the slitted and recessed rod A *w x*, the box B, packing C, and screw D, and nut E for clamping the said packing, as shown and described, for the purpose set forth.

2. The wooden rod or bar A, constructed with two springs, *z y*, arranged as shown, for the purpose specified.

REISSUES.

4,677.—Sectional Steam-Boiler.—William H. Cornell, Easton, Pa.—Patent No. 113,857, dated April 18, 1871.

Claim.—A boiler, in which the tubes and end boxes are arranged substantially as herein described, for the purpose specified.

4,678.—Pump.—Robert M. Lafferty, Three Rivers, Mich., assignor to himself and Edward P. Smith, same place.—Patent No. 104,604, dated June 21, 1870.

Claim.—1. The sheet-metal lining B secured in the interior of the wooden stock A by turning or flanging the ends of the tube forming the lining into grooves cut in the stock, substantially as set forth.

2. The piston *c* provided with the curved openings *d* and with the cup-leather *e* and valve D, when each of said parts is constructed as described, and arranged to operate, as and for the purposes set forth.

3. In combination with the parts named in the preceding paragraph, the plug E with concave upper face, openings *f*, and cup-leather D′, all constructed and arranged to operate, as and for the purposes set forth.

4. The combination and arrangement of the barrel A, lining B, piston C, plug E, and valve D D′, when each part is constructed, arranged, and operating, substantially as described, and for the purposes set forth.

4,679.—Back-Chain for Cart-Saddles.—William B. McClure, Alexandria, Va., assignor of two-thirds interest to John C. Graham and H. O. Claughton.—Patent No. 119,382, dated September 26, 1871.

Claim.—A back-chain for cart-saddles, provided with rollers, substantially as described, as a new article of manufacture.

DESIGNS.

5,424.—Fringe.—William B. Cunningham and Philip Hill, Philadelphia, Pa.

Claim.—The design for fringe with the gimp formed together, as set forth and shown.

5,425.—Fringe.—William B. Cunningham and Philip Hill, Philadelphia, Pa.

Claim.—The design for fringe, as shown.

5,426.—Fringe.—William B. Cunningham and Philip Hill, Philadelphia, Pa.

Claim.—The design for fringe, as shown.

5,427.—Suspended.

5,428.—Match-Box.—Joseph Kintz, West Meriden, Conn., assignor to himself and P. J. Clark, same place.

Claim.—1. The design for the body of the box, as shown.

2. The design for the cover, as shown.

3. The design for the back, as shown.

5,429.—Water-Proof Goods.—Bernhard Metz, New York, N. Y.

Claim.—A design for borders on repellent or water-proof goods, in which the borders are composed of stripes and bars, substantially in the manner shown and described.

5,430.—Water-Proof Goods.—Bernhard Metz, New York, N. Y.

Claim.—A design for a border for repellent or water-proof goods, in which the border is placed and ornamented, substantially in the manner above shown and specified.

5,431.—Water-Proof Goods.—Bernhard Metz, New York, N. Y.

Claim.—A design for a border for repellent or water-proof goods, in which the border is placed and ornamented, substantially in the manner above shown and described.

5,432.—Water-Proof Goods.—Bernhard Metz, New York, N. Y.

Claim.—A design for a border for repellent or water-proof goods, in which the border is placed and ornamented, substantially in the manner above shown and described.

5,433.—Medallion Head of Jackson.—James H. Miller, Philadelphia, Pa., assignor to himself and Charles Kripe, same place.

Claim.—The design for a medallion head of Jackson, substantially as described, and as illustrated in and by the accompanying drawing.

5,434.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic print accompanying this specification.

5,435.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic print accompanying this specification.

5,436.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic print accompanying this specification.

5,437.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic print accompanying this specification.

5,438.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic print accompanying this specification.

5,439.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two-ply, three-ply, ingrain, or other carpeting in the form similar to the photographic print accompanying this specification.

5,440.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic print accompanying this specification.

5,441.—Carpet-Pattern.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic print accompanying this specification.

5,442.—Cake-Tazza.—George Gill, Taunton, Mass., assignor to Reed & Barton, same place.

Claim.—1. The design of the stand C.

2. The construction of such with the stemmed and fern leaves springing from such stem around the bottom of the bowl A.

3. The design of the bottom of the bowl and the series of fern and stemmed leaves, as shown.

5,443.—Sample-Case for Thread and Sewing-Silk.—John N. Leonard, Rockville, Conn.

Claim.—The design, substantially as shown and set forth.

5,444.—Carpet-Pattern.—David McNair, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.

Claim.—The configuration of the design hereunto annexed, when made by being inwrought into two or three-ply, ingrain, or other carpeting in the form similar to the photographic print accompanying this specification.

5,445.—Cake-Tazza or Flower-Stand.—William Parkin, Taunton, Mass., assignor to Reed & Barton, same place.

Claim.—The design of the stand and that of the bowl, also that of each leg of the stand.

5,446.—Carpet-Pattern.—Edward Perrin, Kidderminster, England, assignor to Joseph Wild & Co., New York city.

Claim.—The design for a carpet, as shown.

TRADE-MARKS.

586.—Whisky.—A. W. Balch & Co., New York, N. Y.

587.—Whisky.—A. W. Balch & Co., New York, N. Y.

588.—Gin.—A. W. Balch & Co., New York, N. Y.

589.—Gin.—A. W. Balch & Co., New York, N. Y.

590.—Wine.—A. W. Balch & Co., New York, N. Y.

591.—Pitch-Forks.—Bouton, Whitehead & Co., Naperville, Ill.

592.—Cooking and other Stoves.—Bridgeford & Co., Louisville, Ky.

593.—Axes.—C. Gerber & Co., Toledo, Ohio.

594.—Fertilizers.—Joshua Horner, Jr., Baltimore, Md.

595.—Sheet-Iron.—Rogers & Burchfield, Pittsburg, Pa.

596.—Gloves.—Ware, Marshall & Company, Boston, Mass.

597.—Colors.—Bernhard Weber, New York, N. Y.

598.—Medicine.—Holloway & Co., New York, N. Y.

599.—Medicine.—Holloway & Co., New York, N. Y.

EXTENSIONS.

Solomon A. Bolster, of Boston, Mass., executor of George S. Griggs, deceased.—Letters Patent No. 18,883, dated December 15, 1857.

"Improvement in Locomotive-Furnaces."

Claim.—The within-described arrangement of a fire-brick arch or shelf, attached to the rear of the furnace and extending horizontally, or nearly so, beneath and in front of the tube-sheet, and over the fire toward the fire-door, in such a manner as to

form a combustion-chamber immediately in front of the tube-sheet, in which the smoke and gases, after passing over the heated surface of the bridge, are consumed, as set forth.

JAMES HANLEY, of New York, N. Y.—Letters Patent No. 18,845, dated December 15, 1857; reissue No. 4,583, dated October 10, 1871.

"Improvement in Mechanical Movements for Sewing and other Machinery."

Claim.—The employment of a roller, or equivalent, so constructed and arranged that it will be free to revolve with or be carried away from the balance or driving-wheel of a machine when moved in a proper direction, and to impinge upon and jam against the periphery of the wheel by being forced into or upon an inclined surface or recess, substantially as described, and for the purpose specified.

ISSUE OF DECEMBER 26.

PATENTS.

122,096. — MUSICAL NOTATION. — Fielding Wallace Acee, Columbus, Ga.

Claim.—The method of musical notation herein described, each of the seven notes of the scale being indicated by a distinctive color, as shown, and for the purpose set forth.

122,097.—FIRE-PLUG AND HYDRANT.—Albert Francis Allen, Providence, R. I.

Claim.—1. A hydrant having its delivery-port guarded by a controlling-valve which is incapable of being opened by the normal pressure of water from the mains, and which requires the application of draughting power from a pump to induce the delivery of water, as and for the purposes specified.

2. The combination, within a hydrant, of the piston D and controlling-valve C, connected and operating substantially as described, and for the purposes specified.

3. The combination of the piston D, controlling-valve C, and cam-lever G, as and for the purposes specified.

4. In combination with a pump and hydrant, the controlling-valve C, arranged to remain closed by resisting the highest degree of water pressure, and capable of being opened by the power of suction applied in the usual manner, substantially as and for the purposes specified.

122,098.—PERFORATING-MACHINE.—Frank Anderson, Peekskill, N. Y.

Claim.—1. The segment *d*, or its equivalent, carrying projections or cavities on its sides or face, in combination with a series of punches, substantially as and for the purpose hereinbefore set forth.

2. The movable block A carrying the die and punches with it, and moving on a pivot or in guides or otherwise, and operating against types, stops, or projections, as *f f f*, substantially as and for the purpose hereinbefore set forth.

3. The lever L, in connection with the arm and segment D *d*, so constructed as to admit of both a lateral and vertical movement, substantially as and for the purpose hereinbefore set forth.

4. The manner of operating the punches and feed, namely, through the center of oscillation of the arm D, substantially as and for the purpose hereinbefore set forth.

5. The slotted segmental plate K, or its equivalent, in combination with the lever L and segment *d* D, substantially as and for the purpose hereinbefore specified.

6. The stationary piece *f* for withdrawing the punches from the die, acting substantially as and for the purpose hereinbefore set forth.

122,099. — PAPER-BAG MACHINE. — James Arkell, Canajoharie, N. Y., assignor to Arkell and Smith's, same place.

Claim.—1. In a machine for pasting and folding bag-bottoms, the combination of the drum or carrier for the blank, moving in one direction, as specified, with pasting and folding mechanisms arranged and operating substantially in the manner shown and described to successively paste and fold the material to be operated on, as set forth.

2. In combination with the drum or carrier, on which the blank is held, the creaser K for creasing or indenting the blank, and the folders *b'* or their equivalents, arranged substantially as described, to fold over the paper so creased in a direction contrary to that in which the blank is moving in order to make the first fold.

3. In combination with the drum or carrier, on which the blank is held, the creaser I' and the folders *a'*, or their equivalents, arranged substantially as described to fold the paper in order to make the second fold in the direction in which the blank moves.

4. The combination of the drum or carrier for the blank, the pasting and folding mechanisms, and the creasers, when arranged and operating substantially in the manner shown and described.

5. The rotary paste-wheels, when arranged to automatically move up to and away from the carrier or sack-supporting surface, in combination with the automatically vibratory paster and the moving carrier or bed, the whole arranged to operate as described.

122,100. — PREPARING SALT.—Francis Baker, Boston, Mass.

Claim.—The above-described process of preparing salt for table use, substantially as described, and for the purpose set forth.

122,101, antedated December 23, 1871.—APPARATUS FOR PREPARING SALT FOR CULINARY USE.—Francis Baker, Boston, Mass.

Claim.—1. The combination of the drier A with the ventilating-chamber C, arranged to operate substantially as described, and for the purpose set forth.

2. The combination of the drier A, the passage *a*, and the bolter F, arranged substantially as described, and for the purpose set forth.

122,102, antedated December 6, 1871. — MACHINE FOR MAKING SHOT.—William W. Brigg, Home, Tenn.

Claim.—As a new article of manufacture, the shot-machine herein described, consisting of the handle D E G, hopper F suitably secured thereto, and the perforated card *a*, the whole constructed and arranged substantially as described.

122,103.—EARTH-CLOSET.—Henry C. Bull, New Orleans, La., assignor to Joseph M. Loewenstein, same place.

Claim.—1. The combined link and tank of closet A having guide K, and the valve D, constructed and arranged to operate as described, in combination with the tank B, substantially as shown and set forth.

2. The construction and arrangement of the combined lid and tank C, guide K, sliding valve D, screw-cover W, closet A, and removable barrel-tank B, all as shown and described.

122,104.—STOCK AND FREIGHT-CAR.—James B. Calkins, Pacific, assignor to himself and Josiah Geiger, St. Louis, Mo.

Claim.—1. The combination of adjustable partitions E, buckets D, also made adjustable by their hooks *d d'*, distributing-pipes *c c'*, hose-pipes C C', and water-tank B, all said parts being arranged in a stock and freight car, substantially as and for the purpose set forth.

2. Padding partitions E that form stalls with padding or rubber material, substantially as and for the purpose set forth.

122,105.—DRAUGHT-REGULATOR FOR FURNACES AND STOVES.—Ferdinand E. Chatard, Jr., Baltimore, Md.

Claim.—The cylinder C, in combination with the air-vessel A, the connecting-rods D, E, and F, the movable nut I, the damper-rods H and G, and the dampers K and L, respectively, within the upper and lower draught pipes: the whole, when constructed and operating substantially as described, and for the purpose hereinbefore set forth.

122,106.—BOX OPENER.—Richard H. Chinn, Washington, D. C., and George Hall and Jesse J. Fitch, Morgantown, W. Va.

Claim.—The combination of the jointed claw C, provided with aperture G and toothed point H, with the rule-jointed lever A, when constructed and operated as herein shown and described, and for the purposes specified.

122,107, antedated December 6, 1871.—TREADLE FOR SEWING-MACHINES.—Henry A. Clark, Boston, Mass.

Claim.—1. The treadle or foot-piece E, connected to parallel arms F F^2 suspended on a common axis, *a*, with one, F^2, of said arms extended and connected through rod I with the driving or balance wheel C, constructed, arranged, and operating substantially as described, for the purpose specified.

2. The wheel K, constructed with the rim N and hub O, not contiguous to each other, but connected together for operation through the stems *d d* and springs *e e*, substantially as and for the purpose set forth.

122,108.—WRENCH.—Aury G. Coes, Worcester, Mass.

Claim.—1. The combination, with the bar A and ferrule E, of the tapering, centering, and supporting-collar K, substantially as and for the purposes set forth.

2. The combination, with the ferrule E, of a series of wedge-shaped flanges, I, substantially as and for the purposes set forth.

122,109.—HORSE HAY-RAKE.—James Comly, York, Pa.

Claim.—1. The combination of the swinging draft-frame, the oscillating rake-head, and the sliding locking-bolt with the swinging laterally-yielding latch disconnected from but released by the locking-bolt, substantially as hereinbefore described.

2. The combination of the driving-wheel, the ratchet-ring thereon, the oscillating rake-head, the locking-lever moving parallel with the axle, the sliding bolt, the laterally-yielding swinging-latch moved by the locking-bolt, and the pivoted draft-frame, all these members being constructed and operating substantially as described, so that the locking-lever serves to disconnect the latch and rake-head at the same time—that is, connects the rake-head and toothed ring of the driving-wheel.

3. The combination of the locking-lever, its socket, guide, and retaining-spring, all constructed and operating as and for the purpose described.

122,110. — MARINE PAINT.—John J. Currier and Leonard Cook, Gloucester, Mass.

Claim.—1. The marine paint consisting of sulphuret of copper, natural or artificial, and a suitable vehicle, substantially as described.

2. The marine paint consisting of sulphuret of copper, natural or artificial, melted or mixed with white arsenic and a suitable vehicle, substantially as described.

122,111, antedated December 9, 1871.—SPRING FOR UPHOLSTERY PURPOSES.—James F. Duffy, Chicago, Ill., assignor to himself and George C. Tobius, same place.

Claim.—1. The combination of the semi-elliptic springs A A A' A' and disks B B', substantially as specified.

2. The combination of springs A A A' A', disks B B', and retaining or griping-spring C, constructed and arranged as specified and shown.

122,112.—HEEL FOR BOOTS AND SHOES.—Charles H. Eggleston, Marshall, Mich.

Claim.—1. The described process of veneering a shaped heel with hard rubber by placing soft rubber about the same, compressing it into the desired shape by suitable dies, and hardening by subjection to the usual vulcanizing process.

2. As a new article of manufacture, a shaped heel veneered with hard rubber in the manner described.

122,113. — SEWING-MACHINE. — John Fanning and Edward Nugent, Brooklyn, assignors to John C. Adams and John H. Andrus, Buffalo, N. Y.

Claim.—1. The combination and arrangement of the eccentrics K L, connecting-rods G M, crank O, shaft E, crank P, and needle-bar Q and its connection *a*, and the double-armed lever F, for operating the shuttle and needle, all constructed and operating substantially as described and specified.

2. The double-armed lever F, constructed, arranged, and adapted to work the shuttle and looper, substantially as described.

3. The locking-device, Fig. 4, for changing the positions of the needle and the shuttle and the upper and under needle, when the machine is converted or changed from one stitch to the other, constructed substantially as described and specified.

4. In combination with the above device for changing the time of the vibrations of the lever F, the slotted disk P for changing the throwing the needle, constructed and operating substantially as described.

122,114.—THROAT-CHECK FOR HORSES.—Samuel French, Boston, Mass., assignor to himself and James H. Page, same place.

Claim.—1. The throttle A, substantially as described, for use as set forth.

2. The combination of the throttler A, its hangers *s*, loops *c*, and check-rein *h* with the head-stall B and bit *k*, all being applied and arranged together substantially in manner and to operate as and for the purpose as specified.

122,115. — APPARATUS FOR RECTIFYING SPIRITS, &c.—John Godfrey Guenther, Buffalo, N. Y.

Claim.—In a rectifying-vat, a removable cover, C, provided with the vertical flange *b*, in combination with the annular gutter B having the inner edge *a* lower than the outer edge, substantially as and for the purpose set forth.

122,116.—SAW-COLLAR.—Frank A. Huntington, San Francisco, Cal.

Claim.—The collar B with its flange A, in combination with the spindle D with its collar C and projection *c*, as and for the purpose described.

122,117. — SHINGLE-MACHINE. — Frank A. Huntington, San Francisco, Cal.

Claim. — The combination of the pawls V V, ratchet-wheels T T with the shafts N N, sliding frame P, and springs S S, all constructed to operate substantially as described.

122,118.—ROTARY BLOWER.—William G. Hyndman, Cincinnati, Ohio.

Claim.—1. The piston B, composed substantially of the parts D, F, and G, in combination with the skeleton fan C having blades I with knife-edge ends, when arranged with the case A so as to form co-acting pistons, and to allow cinders or other substances to pass between the fans without injury to the blower, substantially as herein set forth.

2. The case A, when fitted to receive the pistons by coating its interior with a mixture of glycerine and litharge, all as herein set forth.

122,119, antedated December 15, 1871.—CALF-WEANER.—Thomas A. R. Keech, Bladensburg, Md.

Claim.—In combination with the slotted plate or flap A, the slotted adjustable cars B and thumb-screws b^1, constructed and operating as set forth.

122,120.—STOCK-CAR.—Thomas E. Knauss, Zaleski, Ohio.

Claim.—1. The flexible ends *d* and flexible bottom piece *e*, swivel eye-bolt *l* and socket *m*, combined in the folding feed-trough A, substantially as shown.

2. The hand-wheels *g*, shafts *f*, and chains or cords *j*, in combination with the trough A, for the purpose specified.

122,121.—HAND-PLANTER.—John H. Latimer, Crystal Lake, Ill.

Claim.—In combination with the plunger D and slide I, the pivoted lever K and toggle-link J to operate said slide by the movement of said plunger, as set forth.

122,122. — TOY-GUN. — Adam I. Lenhart, New Brunswick, N. J., assignor of one-half his right to Warren K. Lyons; and said Lyons assignor to Daniel B. Felter, same place.

Claim.—The barrel B *b*, the pivot C, the spring-catch D, the spring *d*, rod E, bolt F, spiral spring G, latch H, lever I, and hammer K, when arranged, constructed, combined as herein described.

122,123.—EARTH-CLOSET.—Joseph M. Loewenstein, New Orleans, La.

Claim.—1. The combination and arrangement of the hopper A, the slide or trough B, and the rake C, substantially as shown and described.

2. The combination and arrangement of the bar H, the slide or trough B, and the apron I, substantially as shown, and for the purpose specified.

3. The combination and arrangement of the conduit or pipe E, having the funnel M and cover F, with cask or tank L, substantially as shown and described.

4. The combination and arrangement of the hopper A, trough B, and rake C with the conduit or pipe E having funnel M and cover F, and cask or tank L, substantially as shown and described.

122,124.—COMBINATION LOCK. — Franklin Peter Marsden, Galena, Ill.

Claim.—1. The segment groove *t* in the side of the bolt-frame, as shown, in combination with the segment-flange or rib *p* on the toothed wheel G, as shown, and pinion S in a permutation lock, all substantially as described.

2. In combination with the subject-matter embraced in the first claim, the perforations *s* in the back sides of the segmental flanged wheels G, adjustable stop-pins *r*, and fixed stop-pins *f*, all substantially as shown and described.

3. The movable bars D D^1, with locking-pins *v*, in combination with wheels G, joints *o*, slotted lever D^2, and the pin *i* on the end of knob-lever J, substantially as described.

122,125.—GATE.—Mark Martin, Rockford, Ill.

Claim.—The combination and arrangement of the hinge *h g h*, gate D, cords *a a'*, lever F with latches *n* and *g*, cords *m a a'*, and weight *e*, the whole constructed and operating substantially as described.

122,126, antedated December 20, 1871.—STOVE-LEG. — James T. Milligan, Duquoin, Ill., assignor to himself and Joseph W. Branch, St. Louis, Mo.

Claim.—Casting the lugs B and the base or projection *a* between said lugs, which form the socket-bearings of stove-plates, with a vertical inclination to prevent disengagement of stove-legs C, substantially as set forth.

122,127.—SNAP-HOOK.—Lewis Morse, Attleborough, Mass.

Claim.—1. In a snap-hook having an inclastic tongue connected with the shank or body by means of a spring, which shall serve both as a hinge to the tongue and a spring to force and hold it up to the point of the hook, the spring as arranged between and extended into the tongue and body, in manner as shown, so as to be fully covered and thus protected from injury thereby.

2. The new and improved manufacture of snap-hook as made with its tongue and body composed of two bows struck or formed from plate metal and soldered together, and the tongue next cut or separated from the body, and next reconnected therewith by a spring arranged in and fixed to the two, as described, whereby the spring is made to serve a double purpose, as explained.

122,128. — MACHINE FOR PITCHING BARRELS.—Daniel Myers, Baltimore, Md.

Claim.—1. The oven of the form of an inverted cone, substantially as shown, and for the purpose set forth.

2. The cover, having a slanting roof and conical mouth-piece, substantially as and for the purpose set forth.

3. The oven with lugs, in combination with the cover having corresponding lugs, so as to be attached by means of bolts, substantially as set forth.

4. The fire-pipe, having conical end, in combination with the mouth-piece of the oven, as set forth.

5. The blast-pipe, provided with two-way cock, as and for the purpose set forth.

122,129.—FEED-MILL.—John W. Myers, Lyons City, Iowa.

Claim.—1. A reversible two-faced grinding-plate or disk, A, in combination with an inclosing casing, B, and an inclosed elastic cushion, D, substantially as and for the purpose herein set forth.

2. An outer auxiliary detachable two-faced annular grinding-plate, C, in combination with a casing, B, inclosing a central grinding-plate, A, and arranged to operate substantially as and for the purpose herein set forth.

122,130.—MACHINE FOR REMOVING GREASE FROM LEATHER.—James Perkins, Peabody, and George L. Newcomb, Salem, Mass.

Claim.—1. In a machine for removing grease from leather, the spring and scraper as attached to the top of the end of the frame, in the manner substantially as specified and shown.

2. In a machine for removing grease from leather, a spring and scraper for removing grease from the knife, capable of adjustment in the manner and for the purpose set forth.

3. In a machine for removing grease from leather, the scraper or cleaning-tool D, having combined with it a section of leather or analogous material, for the purpose described.

122,131.—TIN-LINED IRON PIPE.—Clark M. Platt, Waterbury, Conn.

Claim.—A tin-lined iron pipe, constructed in the manner and for the purpose herein described.

122,132.—SOLDERING APPARATUS. — David Porteous, Baltimore, Md.

Claim.—1. The standard *b* having the opening *f*, and combined with the block *d* having the slot *e*, and with the cylinder *h* and bolt *g*, as specified.

2. The angle-iron *m*, combined with the upright *i*, which supports the holding arrangement, and with the base-plate *a*, in the manner described, whereby the holding-arrangement is made adjustable.

122,133.—BARREL.—Henry G. Porter, Grand Rapids, Mich.

Claim.—The combination of two or more ribs, D, extending throughout the entire length of a sectional bent barrel, and the strips F extending between the ribs D at the ends of the barrel, substantially as and for the purpose set forth.

122,134. — DRAWING-TABLE. — Joseph L. Ross, Boston, and Frederick C. Hanson, Charlestown, Mass.

Claim.—1. The adjustable holder K, in combination with a drawing-board, substantially as and for the purpose described.

2. The plate E attached to the top of the shaft C, in combination with the slotted plate F and screw-clamp *e f*, operating substantially in the manner and for the purpose set forth.

122,135.—FASTENER FOR BAGS, &c.—George C. Setchell and Cebra L. Taylor, Norwich, Conn., assignors to themselves and Chester W. Converse, same place.

Claim.—The cord-fastener, constructed as herein described, consisting of the inflexible plate A perforated with three holes, *b c d*, having the knotted cord E inserted up through *b* and down through *c*; thence around the package up through *d* and under that part of the cord between the holes *b* and *c*, by which the free end of the cord is bound and held tight at whatever point drawn, substantially as and for the purpose hereinbefore set forth.

122,136.—MACHINE FOR DICING LEATHER.—Alfred Shedlock, New York, assignor of one-half his right to Claudius F. Bentty, Brooklyn, N. Y.

Claim.—1. The grooved dicing-roller *e*, in combination with the rotating bed *d*, substantially as set forth.

2. The combination of the rotating bed *d*, grooved dicing-roller *e*, and elastic feeding-roller *f*, substantially as set forth.

3. The trough *l*, in combination with the dicing-roller *e*, substantially as and for the purpose set forth.

122,137.—MACHINE FOR PLAITING CLOTH.—William Mont Storm, New York, N. Y.

Claim.—1. The single-hinged or swiveling reciprocating feeding-bar or blade I, in combination with the table A and the drawing-rolls C C^1, having yielding or elastic surfaces or bearings, combined and arranged in the manner and for the purpose specified.

2. In combination with the folding and feeding blade, the cushion or pad *z*, arranged in the face thereof, for the purpose specified.

122,138.—MUSICAL CAGE FOR ANIMALS.—Antonio Suppernio, Milburn, N. J.

Claim.—1. The combination of the rotary cage with the music-box and the ratchet, substantially as before set forth.

2. The combination of the rotary cage with the music-box and the slides, (which permit the music-box to be thrown out of gear with the rotary cage,) substantially as before set forth.

3. The combination of the rotary cage, and the music-box, and the slides with the eccentric lever, (for moving the music-box into and out of gear with the cage,) substantially as before set forth.

4. The combination of the rotary cage with the crank-shaft (for turning it by hand) by means of a cog-wheel and pinion, substantially as before set forth.

5. The combination of the rotary cage and the stationary shaft thereof with the support for the food-cup within the cage, substantially as before set forth.

122,139.—WRENCH.—George C. Taft, Worcester, Mass., assignor to John H. Coes, same place.

Claim.—The combination, with the bar A and ferrule D, of the thimble K, having internal and external screw-threads of different pitch, substantially as and for the purpose set forth.

122,140.—SAFETY-CLASP FOR POCKETS.—Daniel C. Tuck, Farmington, Me.

Claim.—As a new article of manufacture, I claim the above-described safety-clasp for pockets, the same being constructed and operated substantially as set forth.

122,141.—ELASTIC WASHER.—John P. Verree, Philadelphia, Pa.

Claim.—A dished elastic washer, having its periphery formed into a series of radial corrugations, as and for the purpose set forth.

122,142.—PROCESS OF TREATING RAWHIDE. Benjamin F. Wright, Winchester, assignor to Charles H. Drew, Brookline, and Francis T. Morton, Boston, Mass.

Claim.—1. The process of coloring and making elastic and water-proof rawhide by the action of coloring-matter, ironized glue, and caoutchouc dissolved in naphtha or some other suitable substance, and combined with a solution of gum-copal, successively and in combination, substantially as above described.

2. The process of making rawhide elastic and water-proof by the action of ironized glue and a solution of caoutchouc dissolved in naphtha or some other suitable substance, and combined with a solution of gum-copal, successively and in combination, substantially as above described.

3. The process of subjecting rawhide to the action of glue or any equivalent substance so that the glue shall be absorbed into the substance of the hide, substantially in the way and for the purpose above described.

4. The process of rendering rawhide water-proof and flexible when dry by immersing it in a solution of caoutchouc dissolved in naphtha or some equivalent solvent, and combined with a solution of gum-copal, substantially as above described.

5. As a new article of manufacture, the article produced by the subjecting rawhide to the action of glue, either with or without iron in combination with it, and coated or covered with a solution made of caoutchouc dissolved in naphtha or some other suitable solvent, and combined with a solution of gum-copal or some equivalent, substantially as above described.

6. As a new article of manufacture, rawhide subjected to the action of caoutchouc dissolved in some suitable solvent, combined with a solution of gum-copal, so that the caoutchouc and copal shall be absorbed into the substance of the rawhide, substantially as described.

122,143, antedated December 22, 1871.—FRUIT-JAR.—Hasaga U. Allen, North Bennington, Vt.

Claim.—The improved jar formed of the rectangular body A, provided with the inclined grooves a^1, the cover B with a rounded top and with a groove b^1 and bead b^2 upon its under side, and the clamping-strap D, substantially as shown and described.

122,144.—Saw-Filer's Vise. — Nathan H. Baldwin, Laconia, N. H.

Claim.—An improved saw-filer's vise, formed by the combination of the foot A, hand-bolt B, jointed standard C, bolt and hand-nut D, jaw E provided with a slotted half circle *e'*, cross-head bolt F, hand-nut *f'*, jaw G, ears H, and hand-bolts I with each other, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

122,145. — Apparatus for Producing Plane or Parallel Movement.—Albert G. Barrett, Barrett, Kan.

Claim.—An improved plane or parallel movement, formed by the bars or sweeps A B, pivoted at their lower ends to some suitable support, and pivoted at their upper ends to the ends of the bent or curved bar C, having a bearing formed in its middle or lower part to receive the pin or bolt that pivots it to the moving object, the said parts A B C being arranged and operating substantially as herein shown and described, and for the purpose set forth.

122,146.—Thill-Coupling.—Lester D. Belnap, Jonesville, Mich., assignor of one-half his right to George W. Bullock, same place.

Claim.—The combination, with the clip proper and the thill-iron, of the upper branch *b*, the side lap-joint connection between said branch and thill-iron, the locking cam-tongue *c*, rubber block E, and projected guard-ears D, all constructed and arranged substantially as and for the purpose set forth.

122,147.—Combined Coal-Hod and Sifter. Ralph Bogle, Milton, Pa.

Claim.—The hod A, lid or cover *a'*, and sifter B, the said parts being constructed and arranged substantially as described and set forth.

122,148.—Grain and Seed Separator.—John Boozer, Potter's Mills, Pa.

Claim.—In combination with the riddle-box C, the crank *f*, bolster-connections *a b c d*, and shoulders 1 1 and 2 2, for giving said riddle-box a combined rocking and jarring motion, substantially as and for the purpose described.

122,149.—Spring-Bit for Cleaning and Enlarging Wells. — James H. Boyd, West Monterey, Pa.

Claim.—The tool, having shank A, provided with steel bit *b* at the lower end, with rigidly-secured spring B on one face having lip *d*, and extending below the bit, and with the pivoted spring-catch C with a hook thereon, all constructed and arranged as and for the purpose specified.

122,150.—Washing-Machine.—Thomas M. Brintnall, Medina, Ohio, and William Eugene Powers, Cortland, N. Y.

Claim.—1. The combination of the tank A, the perforated rotating cylinder D, the force-pumps, and the perforated or slotted pipe K, all constructed and arranged to operate substantially as described.

2. In combination with the perforated rotating cylinder, we claim the hubbing slats *e* with spring-attachments, substantially as described.

3. In combination with the tank A, hinged cover A', and rotating perforated cylinder, we claim the expressing-rollers *g g* attached by springs to cover A', substantially as and for the purpose described.

122,151.—Windlass. — Edgar Buell, Clinton, Conn.

Claim.—1. The arrangement of the fulcrum F, which supports the lever E, upon an arm, H, the said arm being pivoted so as to swing to the right and left, substantially in the manner described.

2. A windlass-drum constructed of several legs L, each of the said legs arranged with parallel rods *n n*, one of which is pivoted to the shaft and the other to an adjustable head on the shaft for the purpose of expanding and contracting the drum, substantially as described.

122,152.—Supporting-Busk for Corset-Fastenings.—Mellissa E. Bulkley, Providence, R. I.

Claim.—The sliding pieces I I and fixed piece K, constructed and combined with the busk, as and for the purpose specified.

122,153.—Hair-Switch.—Benjamin Franklin Burgess, Jr., Boston, Mass.

Claim.—As a new article of manufacture, a "switch" composed partly of human hair and partly of thread, substantially as shown and described.

122,154.—Blind-Stop.—Perry A. Burgess, Butler, Mo.

Claim.—The bar E, spring H, and hinged catch M, arranged with the perforated plate K and grooved plate I, and all set into the frame so as to be flush with the surface of the same, as shown and described.

122,155.—Plow-Cleaner.—George W. Burr, East Line, N. Y.

Claim.—The clearing-wheel A, provided with curved or downward-projecting teeth, arranged in the throat of the plow, as shown and described.

122,156.—Base-Burning Cooking-Stove.—William Clark, Shelburne, Vt.

Claim.—1. A cooking-stove provided with a circular case or body, B, which contains a circular rotary lining, as set forth.

2. The rotary lining E, arranged within the fireplace of a cooking-stove and geared into an arbor, *b*, whereby it can be turned, as set forth.

3. The grate F, supported and swiveled in the cross A, which is secured within the rotary lining E of the stove, as specified.

4. The partition H, fitted across the circular fireplace, substantially as herein shown and described.

5. The combination of the rotary lining having the hole *l*, with the stationary case B having the hole *m*, and with the intervening annular smoke-passage *d*, as set forth.

6. The ribs *o p*, arranged respectively on the lining E and case B, substantially as and for the purpose herein shown and described.

7. The smoke-chamber s under the reservoir J, when provided with the ribs *r r*, and arranged in combination with the damper *w* and flue *t*, substantially as herein shown and described.

122,157.—Tanning-Vat. — Joseph W. Coburn, East Walpole, Mass.

Claim.—A horizontal liquid-circulating wheel *g*, in combination with a tanning-vat.

122,158, antedated December 21, 1871.—Picture-Frame, &c.—George E. Collins and Willard C. Collins, Bucksport, Me.

Claim.—1. Securing or re-enforcing the miter-joints of picture or mirror frames by means of a metal band inserted in a groove or cut, *a*, made at a right angle with such joint, or nearly so, the tie extending along the edge of the frame so as to prevent the separation of the parts, substantially as shown in Fig. 1.

2. Securing the joints of picture and mirror frames by a metal tie inserted in a cut or groove, *a*, and embracing the corner of the frame, as at *c c*, substantially as shown in Fig. 2.

3. Securing the miter-joints of picture and mirror frames by a metal tie passing twice across the corner of the frame at *c c*, and embracing a portion of the edge of the frame, as at *d d*, substantially as shown in Fig. 3.

122,159.—Automatic Oiler for Looms.—Joseph Crook, Ludlow, Vt.

Claim.—As an article of manufacture, a loom-oiler formed of oil-reservoir A a^1, shank a^2, and two upwardly-inclined wick-tubes, B B, set an angle of about one hundred and twenty degrees, and thus adapted to oil eight parts of the loom, in the manner described.

122,160.—Heating-Stove.—Mark A. Cushing, Aurora, Ill.

Claim.—The combination and arrangement of the radiating-chamber D, the pipe E, chamber F, and damper H, substantially as specified and shown.

122,161. — Circular-Saw Mill.—Malancton W. Danks, Fulton, N. Y., assignor to himself and J. E. Harroun, same place.

Claim.—1. The bevel friction-wheels H and I K and P, saw-shaft B, gig-shaft D, feed-shaft E, carrying-wheels P, Q, and R, the wheels L, M, and N, and shaft O and its friction-wheel, all constructed, arranged, and operating as shown and described.

2. The arrangement, in combination with bevel friction-wheels for feeding and gigging, as described, of the levers J, T, and U, and rods 1, 2, and 3, by means of which the sawyer may give the proper feed or change the feed, or gig back the carriage without changing his position, substantially as set forth.

122,162.—Plow.—William H. H. Doty, Sonora, Ohio.

Claim.—The longitudinally-adjustable frame A C D, combined, as described, with a pair of handles, H H, pivoted thereto, and supported by adjustable braces L L, so that the handles and beams can be simultaneously and correspondingly adjusted, as set forth.

122,163. — Mode of Covering Harness-Mountings. — William Fawcett, New York, N. Y.

Claim.—1. Harness-mountings covered with leather or hard rubber upon the outer side, leaving the inner side uncovered, substantially as herein shown and described, and whether the wires C be used or not, as set forth.

2. The wires C, in combination with the covering B and mountings A, substantially as herein shown and described, whether the said wires be upon the outsides or covered by or embedded in the said covering B, as set forth.

3. The shoulder or recess formed upon the outer surface of harness-mountings to adapt them to receive a cover upon their outer sides, substantially as herein shown and described, and for the purpose set forth.

122,164.—Clothes-Wringer.—John Fox, Farmersville, Iowa.

Claim.—1. The combination of the gear-wheels L M, cross-bar P, and wheel Q, provided with pins or lugs R, with the journals of the rollers B C of the clothes-wringer, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the blocks D, cross-bar E, curved lever F f^5 f^6 f^6, lever G, and plate H, having one or more holes formed in it, with the journals of the upper roller B of the clothes-wringer to enable pressure to be applied to said roller, as set forth.

3. The combination of the rod I and swiveled treadle J with the levers F and G to enable power to be applied to said lever with the foot, substantially as herein shown and described.

122,165.—Head-Rest for Car-Seats.—John C. Gifling, New York, N. Y.

Claim.—The base-block D applied to a car-seat back by means of two straps, F G H, as and for the purpose described.

122,166. — Butter-Tub.—James Gilberds, Jamestown, N. Y.

Claim.—A package for butter and other articles, consisting of an interior wood part, A, an exterior sheet-iron part, B, and a wood and iron cover, C D, the iron part of the cover being flanged to lap over the top of the part B to be soldered thereto or not, all substantially as specified.

122,167.—Billiard-Register.—Leon Godefroy, Pulaski, Tenn.

Claim.—The hollow string or tube, in combination with the central rotating rod and counting-buttons, all constructed as described, and arranged to operate as set forth.

122,168, antedated December 9, 1871.—Folding Hat-Rack.—Nathan Hayden, Chicago, Ill.

Claim.—1. A circular folding hat-rack, composed of slats C and C' connected by screw-threaded pins E and E', the whole arranged substantially in the manner and for the purpose described.

2. In combination with a circular folding hat-rack, as described, the frame F provided with a looking-glass, F', all arranged substantially as and for the purpose described.

122,169.—Pen-and-Pencil Case.—William S. Hicks, New York, N. Y.

Claim.—A combined pen-and-pencil case, constructed and arranged to operate substantially as described, whereby the extension of the pen-tube shall automatically project the pencil, as set forth.

122,170.—Process of Printing on Enameled or Vitreous Surfaces.—Samuel J. Hoggson, New Haven, Conn., assignor to himself, William A. Peck, Jr., and Whiting S. Sanford.

Claim.—The herein-described process for printing on enameled or vitreous surfaces, consisting in the employment of a fusible enamel, applied by a type or similar device to give the requisite impression.

122,171, antedated December 9, 1871.—Metallic Lathing.—Isaac V. Holmes, New York, N. Y.

Claim.—1. Fastening sheet-metal lathes to the supports prepared to receive them by forcing the edges of such laths into slits in the edges of such supports, when such slits are cut at an angle to the edge of such supports, either more or less than at a right angle, by the mere grasping force of such supports upon the laths, and of the laths upon the supports, without the aid of bolts, nails, rivets, or of beating out either laths or supports, substantially as described and shown.

2. Attaching sheet-metal laths to the supports provided for the same, by bending tongues formed from the body of the laths into openings or grooves provided in the supports to receive them, as shown in Fig. 2 of the drawing, and as above described.

3. Fastening metallic lathing to the supports prepared to receive them by beating out portions of the metal forming such laths into recesses, or between projections formed on the surfaces of such supports, as described.

4. Passing the tongues or projections formed on the edges of metallic supports for laths through slits provided in the laths, then riveting or bending these tongues or projections over upon the body of such lath, substantially as set forth.

5. Locking a metallic lath to the support provided for the same by bending portions of the body of such lath back, over the edge of such support, or by bending portions of the edge of such support down upon the body of such lath, as described, and as shown in Fig. 5 of the drawing.

122,172. — HOMINY-MILL.—Theodore Hudnut, Terre Haute, Ind.

Claim.—1. The combination of the shaft B, plates E, lugs F, arms I, cutters G, and the collar D, all substantially as specified.

2. The connection of the cutters G to the shaft B and plate E by the lugs F and arms I, constructed and arranged substantially as specified.

122,173.—TREATMENT OF PEAT FOR FUEL.—Edwin James Hulbert and Aimé-Nicholas Napoleon Aubin, Portland, Conn.

Claim.—The combination, into a system of treating peat for fuel, of a series of devices, enumerated in the above specification, by which the crude material is dug up from its position in the swamp, deprived of its excess of water, carried to the grinding-machinery, elevated, divided, cleaned, and liberated from foreign substances, ground and puddled, molded and spread upon the ground for drying by natural heat, the whole substantially and for the purpose as hereinbefore set forth.

122,174.—LIQUID-METER.—David W. Huntington and William A. Hempstead, South Coventry, Conn.

Claim.—The chests B B', provided with valves J N and ports *a a'*, *b b'*, *d d'*, and *e e'*, combined with devices F G H attached to the piston-rods, all constructed and arranged as and for the purpose set forth.

122,175.—CAR-COUPLING.—Frederick A. Illingworth, Waltham, Mass.

Claim.—1. The shackle D, pivoted to a draw-head and provided with a prop, *g*, substantially as and for the purpose herein shown and described.

2. The combination of the draw-head A, pivoted hook B, prop C, and chain, rope, or rod *d* with the pivoted shackle D and prop *g*, all arranged to operate substantially as herein shown and described.

122,176. — CORN-HARVESTER.—John Johnson, Mott Haven, N. Y.

Claim. — The centrally-arranged lifter D, backwardly-diverging knives E E, and guide-fingers F F, combined and arranged on a wheeled frame, as described, and for the purpose specified.

122,177. — APPARATUS FOR CLOSING BARRELS AND CASKS.—Adolph Koegler, Newark, N. J.

Claim.—1. The combination of a block or vessel containing a perforated slide or plug with a plunger, C, and pipe D, for opening and closing barrels and injecting liquids or other matter, as set forth.

2. The plug B having the passages *b* and *h*, and connected with the tube D and pipe *f*, substantially as herein shown and described.

3. The apparatus as herein described for applying the new tap within the aperture *b* of the plug or slide, so that by the same motion of the plug or slide which shuts the injection-tube the tap is brought under the plunger, as specified.

4. The block A attached to a slide, H, which is operated by a lever, J, substantially as herein shown and described.

122,178.—DEVICE FOR SUPPORTING DRAWERS.—Charles F. Langford, Brooklyn, N. Y.

Claim.—1. A button-loop and hook combined, consisting of the parts A, B, and C, substantially as and for the purpose set forth.

2. The improved device for supporting drawers and other garments, consisting of the frame A, socket B, hook C, link *d*, and strap F, arranged and operating substantially as and for the purpose set forth.

122,179.—FOLDING-BUREAU.—John E. Lawrence and John S. Young, Philadelphia, Pa.

Claim.—The top A, cleats B, back C, hook and eyes D, and hinged end pieces E F, combined in a folding-bureau, as and for the purpose described.

122,180.—HEMMER FOR SEWING-MACHINES.—Stephen B. Lawrence, Scarsdale, N. Y.

Claim.—1. A hemmer, consisting of presser A, having slot C D and point *B'*, and the detachable scroll G J secured by a screw, I, or its equivalent, as described.

2. In hemmers, the piece A, notched at F, as and for the purpose described.

122,181, antedated December 20, 1871.—MACHINE AND PROCESS FOR MANUFACTURE OF PEAT FUEL.—Thomas H. Leavitt, Boston, Mass.

Claim.—1. The process of treatment described, said process consisting in first compressing crude peat to extract a portion of the water contained in or held by it, next dividing up the compressed peat and working or kneading the mass, either with or without the application of heat, steam, or water, and then compressing the peat, so worked, in suitable molds to extract more or less of its moisture and form it into suitable blocks for fuel.

2. Also, the process of treating peat in a pulping-mill by injection into or upon it of inflammable material.

3. Also, in combination with the pulping-mill, the cylinder *i* for receiving and compressing the peat and delivering it in uniform quantities and at uniform intervals into the mill.

4. Also, the rotary cutter *p*, in combination with the mold-cylinder *i*.

5. Also, the combination of a compressing and molding cylinder above a pulping-mill—a mill provided with rotary beaters or blades—and a block-forming mold-cylinder below the mill, all arranged to operate substantially as described.

6. Also, the steam-pipe o^3 and inclosed pipe p^3, arranged to eject an inflammable liquid or powder and steam upon the mass of peat in the mill.

7. Also, in combination with the block-forming and compressing cylinder, the apron f^2 for closing the molds and acting as a bed against which to compress the peat, and through which to express water therefrom, the apron traveling with or being moved by the cylinder.

8. Also, in combination with the block-forming mold-cylinder, the endless carrier-apron A^2, provided with lugs P, which automatically take the block-receivers m^3 and carry them into position to receive the blocks from the mold-cylinder and then away with said blocks, substantially as described.

9. Also, a peat-fuel having artificially combined with it straw, dried grass, or similar material, to facilitate the expression of the water therefrom.

122,182. — RETRACTOR FOR REVOLVING FIRE-ARMS. — Thomas Lee, Westport, Conn.

Claim.—The retracting-bar *a*, stud *c*, double slotted vibrating-arm *d*, stud *f*, and hammer, combined for operation as set forth.

122,183. — DETACHABLE HAIR CURL AND APPARATUS FOR MANUFACTURING THE SAME.—John Mayer, Philadelphia, Pa.

Claim.—1. A long curl having its coils made of comparatively short curled hair, mohair, or vegetable fiber attached to and brushed spirally around a distinct and previously-made padding, B, of short, straight, inferior hair, mohair, or vegetable fiber, with a cord, A, fixed longitudinally through its center, substantially as and for the purpose hereinbefore set forth.

2. A long curl having its coils made of comparatively short curled hair, mohair, or vegetable fiber, attached to and brushed spirally around the fringe of short crimped hair, mohair, or vegetable fiber, substantially as and for the purpose hereinbefore set forth.

3. The apparatus, consisting of the split tube C, and the cord A and pendent weights *b' b'* or their equivalent tension devices, substantially as and for the purpose set forth.

122,184. — KNEADING-MACHINE.—Edward McAllister, Rochester, N. Y.

Claim.—The trough A, in combination with the removable rollers B C, the elastic connection, and its traversing mechanism *i e f*, operating substantially as and for the purpose specified.

122,185.—COMBINED AXLE-BOX, SAND-BAND, AND CASING FOR CARRIAGE-WHEEL HUBS. Micheal McNalley, Houston, Tex.

Claim.—The axle-bar B, cast solid with casing C and sand-band E and sockets G, and combined with casing D and nut F, and arranged as shown and described.

122,186, antedated December 23, 1871.—BRUSH.—James Michales, Jr., and Richard Jaques Comba, Bergen, N. J.

Claim.—As a new article of manufacture, a brush, B, with scraper A, provided with lug *a* attached thereto, as and for the purpose set forth.

122,187.—GUN-BARREL.—Rensselaer R. Moore, Cortland, N. Y.

Claim.—As a new article of manufacture, a gun-barrel having a contracted muzzle formed in the metal of the barrel itself, substantially as described.

122,188.—RELEASING DEVICE FOR STABLES. Edmund B. Myers, York, Pa.

Claim.—The arrangement of the series of bolts D, when made of different length, or so arranged in combination with the slide-rod B as to release the horses or cattle in regular succession, substantially as set forth.

122,189.—CAR-COUPLING.—Franklin Nalley, Battle Ground, Ind.

Claim.—1. The device E F G, combined with pin D and catch H, as described, so that the former will operate both the latter simultaneously, as set forth.

2. The spring-pressed and loosely-pivoted catch H, constructed and applied to the bumper-head of a car-coupling, as and for the purpose described.

122,190.—TUYERE.—Stephen Parsons, St. Francisville, Mo.

Claim.—As an article of manufacture, a tuyere, A B C, constructed in one piece and as described, for the purpose set forth.

122,191. — CORN-PLANTER. — Joseph Pies, Sparland, Ill.

Claim.—The combination of the rotary spider F having the triangles *f f*, with the spring-arms *d d*, slide I, and seed-slide H, all arranged to operate substantially as herein shown and described.

122,192.—JEWELRY-FASTENING. — Robert James Pond, New York, N. Y., assignor to Hodenpyl, Tunison & Co., same place.

Claim.—The continuous snap A, arranged within the tube B, and made substantially as herein shown and described.

122,193.—TOY-PISTOL. — Henry M. Quackenbush, Herkimer, N. Y.

Claim.—1. The barrel B and aperture D, in combination with the air-chamber F and piston G, when made to operate as and for the purposes described.

2. The groove L and spring *m*, as and for the purposes described.

3. The case A, barrel B, with the aperture D and sliding piston G, combined and arranged to operate as and for the purposes described.

122,194. — APPARATUS FOR EVAPORATING SUGAR, &c. — Peter Robinson, Harrisburg, Ill.

Claim.—1. The double-bottomed pan E, in combination with the water-back *g* and fire-box or furnace B, substantially as and for the purpose herein set forth.

2. The circulating-tank H, in combination with the water-back *g* and water-space *w*, of the double-bottomed evaporating-pan E, substantially as and for the purpose herein set forth.

3. In combination with each other, the upper and lower pans A and E, furnace B, flue D, tank H, and water-space *g* and *w*, when the same are all connected and arranged to operate substantially as and for the purpose herein set forth.

122,195.—LIQUID-MEASURING APPARATUS.—Johann Schmidt, Vienna, Austria, assignor to Samuel Hirschl, Davenport, Iowa.

Claim.—1. The rotary cylinder *h*, arranged within the cylinder *g*, from which it is supplied and into which it discharges, an index mechanism being combined with the apparatus, all substantially as shown and described.

2. In combination with the cylinders *g h* and the index mechanism, the supply-pipe *l* and two-way cock *m*, substantially as described.

122,196. — SOUNDING-BOARD FOR MUSICAL INSTRUMENTS. — John Henry Schucht, London, England, assignor to Charles F. L. Goffric.

Claim.—A sound-board formed of alternate layers of hard and soft materials, substantially as and for the purposes described.

122,197.—COTTON-PRESS.—Thomas D. Simpson and William S. Lamkin, Marshall, Tex.

Claim.—The curved blocks G on the follower, combined with dogs C pivoted in blocks F that slide on the bars B, when constructed and arranged as and for the purpose specified.

122,198.—ADJUSTABLE CUT-OFF VALVE.—George W. Smith, New Haven, Conn.

Claim.—1. The combination of the adjustable packing E with the grooved flanges of the ends of the valves B and with the slides D, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the walking-beam K J provided with spring-catches L M at its ends, the three-armed plates N O P, ropes or chains Q, and springs U with each other and with the valve-shafts C and driving-shaft H, substantially as herein shown and described, and for the purposes set forth.

3. The combination of the pins V, spring W, pins X, bent levers Y, and connecting-rod Z with the spring-toes L, walking-beam K, and governor A', substantially as herein shown and described, and for the purpose set forth.

122,199, antedated December 16, 1871.—CLOTHES-PIN. — Lewis Sprague and Charles H. Sprague, Henderson, N. Y.

Claim.—The combination of the tightener and clamps together, forming a clothes-pin, as shown and described, and for the purposes as set forth.

122,200.—HOUSE-BELL. — Amos L. Swan, Cherry Valley, N. Y.

Claim.—1. The bar C, roll K, combined with the

bell-cord E and spring F, substantially as and for the purposes described.

2. The cam I and slotted plates M N, arranged to operate as and for the purposes described.

3. The pin P and spring S, in combination with the slotted plates M N, as and for the purposes described.

4. The combination, with a house-bell, of the plate A, bar C, cam I, slotted plates M N, pin P, springs S and F, rod G, arranged substantially as and for the purposes described.

122,201. — HARVESTER. — John B. Thomson, Lynchburg, Tenn.

Claim. — 1. The shafts S W, pulleys or chain-wheels T V, endless bands or chains U, lugs or eyes X, rake-tooth Z, arm A', recessed and notched shaft Y, bar C', spring or springs E', arm or pin F', and stop-pin G', in combination with each other and with the finger-bar C, frame D, and the driving gearing of the machine, substantially as herein shown and described, and for the purpose set forth.

2. The arrangement of the gear-wheels H I, crank-shaft J, connecting-rod K, segmental reciprocating gear-wheel L, gear-wheel M, shaft N, universal joints O, shaft P, and gear-wheels Q R with each other and with the driving-shaft G, frame A, detachable-hinged frame D, and shaft S that operates the raking device, substantially as herein shown and described, for the purpose of giving a reciprocating movement to the rake, as set forth.

122,202. — RAILWAY SIGNAL. — Charles D. Tisdale, Boston, Mass., assignor to himself and Samuel Shackell, same place.

Claim.—1. In connection with a railway track, a horizontal liquid-charged tube having vertical piston-cylinders, upon the rods of which are placed signals, said rods having projections which are moved by a passing engine or car, the movement of one rod and its signal effecting the movement of the next piston and its signal, substantially as described.

2. In combination with two or more signals mounted upon the pistons of the hydraulic tubes the cock *p q*, so arranged that either signal may be operated from the station without effecting the other signal or signals, substantially as described.

3. The jointed inclines or arms having their outer ends at different elevations, (as shown in Fig. 3,) so that an engine in passing in one direction raises the signal, and in passing in the other direction lowers the signal, substantially as described.

122,203. — SHOE-FASTENING. — Samuel P. R. Triscott and George Alfred Wheeler, Worcester, Mass.

Claim. — 1. The eyelet B stamped out of and forming a part of the lower plate A of the lace fastening, substantially as herein shown and described, and for the purposes set forth.

2. The tongue C formed upon the end of the lower part A, of the lace fastening, substantially as herein shown and described, and for the purpose set forth.

3. The spring d^3 formed upon the end of the upper part D of the lace fastening, in combination with the notched ends of the turned-up sides of the lower part A of said lace fastening, substantially as herein shown and described, and for the purpose set forth.

4. The lace fastening formed by the combination of the lower part A B C and upper part D d^1 d^2, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

122,204.—FEED-WATER HEATER.—William E. Walsh, Jersey City, N. J.

Claim.—The metallic feed-water heater, having two zigzag sides, A, narrow sides B, and ends C, constructed as described.

122,205. — CARRIAGE-TOP PROP-BLOCK WASHER.—Abraham D. Westbrook, Astoria, N. Y., assignor to Fletcher W. Dickerman, New York city.

Claim.—As an improved article of manufacture, the rubber carriage-top prop-block washer, made substantially as herein shown and described.

122,206.—SPADE-BAYONET.—William Shepard Wetmore, London, England.

Claim. — 1. In combination with the blade or shield and with a bayonet, the sheath or handle *c'*, substantially as shown and described, for the purpose specified.

2. The improved defensive-plate and intrenching-tool, provided with a socket having a prolonged section, as shown and described, for the purpose specified.

122,207.—CAR AND TENDER LOADING APPARATUS.—James Williams, Bell's Depot, Tenn.

Claim.—The tilting box C, having hinged side M with end pieces O O, combined with sliding blocks E E, supporting-beam F, and gauge-bar G, when all are applied to a frame movable on the track of a railroad, as and for the purpose described.

122,208. — RAILWAY PASSENGER-CAR.—James T. Worley, Cleveland, Ohio.

Claim.—Opening the side doors or windows of a railroad car by means of a swinging weight, substantially as described, for the purposes above set forth.

122,209.—SEWER-TRAP AND CATCH-BASIN.—Alfred R. Ashman and Alfred H. Newell, Cincinnati, Ohio.

Claim.—1. The combination of the basin A, inlet C, basket D, outlet E, pipe F, and trap G in said pipe, all constructed and arranged to operate as and for the purposes specified.

2. In combination with the basin A, the basket or concave grating D, constructed with lugs *d*, projection *d'*, and intervening spaces *d''* between said lugs *d*, and adapted to rest on the ledge *a*, as set forth.

122,210.—THRESHOLD.—Elias Baker, Meriden, N. H., assignor to George A. Colby, same place.

Claim.—1. The device of the adjustable threshold, with an independent movable section capable of being elevated and depressed, in whole or in part, by the action of screws or other similar equivalent devices, substantially as and for the purpose hereinbefore set forth.

2. The appliance of the rubber packing, substantially as and for the purpose hereinbefore set forth.

122,211.—FILLER-BOX FOR CIGAR-MAKERS.—George Barry, Chicago, Ill.

Claim.—The tapering box A B F, provided with cover C, bottom E, door H, and screen D, substantially as and for the purpose set forth.

122,212. — ENVELOPE. — Samuel D. Bates, Boston, Mass.

Claim.—As a new article of manufacture, the envelope described and shown, having a triangular slit, *c d d'*, with an embossed lip, *d d'*, in the lower lappel, and arranged to receive the triangular point *a* of the upper lappel, said point being water-proof, substantially as set forth.

122,213.—THILL-COUPLING.—Edward Batwell, Ypsilanti, Mich.

Claim.—The combination of the rigid jaw B, provided with a rigid draft-pin, C, with the latch-jaw E, shaft-iron D, and packing *e*, all arranged relative to each other and to the clip A, substantially as and for the purpose set forth.

122,214.—BRICK-MACHINE.—François Beaujeu, Parish of Orleans, La.

Claim.—1. In a machine for making bricks, the combination of the plain and fluted working-rolls, the kneading-cylinder, and the hoppers for conducting the earth from the one to the other of these devices, substantially as herein shown and described.

2. The combination, with the kneading-cylinder, of the working-rolls, feed-hoppers, and endless feed-apron, under the arrangement and for operation substantially as herein shown and described.

3. The kneading-cylinder, in combination with the cutting-table and the feed or drawing rolls and draw-plate intermediate between said cylinder and table, substantially as herein shown and set forth.

4. The cutting-table, constructed and arranged to operate in the manner herein shown and described.

5. The combination of the feed-apron, working-rolls, feed-hoppers, kneading-cylinder, drawing-rolls, draw-plate, and cutting-table, organized and arranged for joint operation, substantially as herein shown and described.

6. The molding-press, consisting of the parts herein specified, constructed, and arranged to operate in the manner shown and set forth.

122,215. — HEAD-BLOCK.—Nelson F. Beckwith, Omro, Wis.

Claim.—1. In combination with the standard for saw-mill carriages, the hooks C D, adapted to be simultaneously projected in opposite directions through the central vertical slot in the face of said standard, substantially as described, for the purpose specified.

2. The combination of the hooks C and connecting-bars F I, with the operating lever and the hook D, substantially as described, for the purpose specified.

3. The combination of the supporting guard-plate K with the slotted standard and the hooks C D and their attachments, substantially as described, for the purpose specified.

122,216.—BRONZING-MACHINE.—Edward F. Benton, Buffalo, N. Y.

Claim.—1. The hopper, constructed as described, when arranged with the lifting-frame of the dusting and spreading rolls, in the manner and for the purpose set forth.

2. The combination and arrangement, with the bronzing-roller, of one or more (preferably four) distributing-rollers, operating substantially as and for the purposes hereinbefore described.

3. The bronze-roller, constructed as described, in combination with the raising-lever or automatic lifting device, substantially as described, for the purposes set forth.

4. The gripers, constructed as described, in combination with the cylinder and releasing lugs, for the purposes set forth.

5. The closing springs or their equivalent on the back of the griper-arms, so constructed and operating as to close the arm-holes in the periphery of the cylinder to prevent the escape into the interior thereof of bronze.

6. The combination, with the polishing and cleaning rollers, of the brushes for freeing the same of bronze they take up from the sheet, when arranged to operate as shown and described.

7. The combination, with the polishing and cleaning roller, or any brushes, for freeing superfluous bronze, of a reel or comb for cleaning the same, substantially as described.

8. The combination, with the first or upper polishing and cleaning roller and freeing-brush, of a lower or auxiliary polishing and cleaning roller and freeing-brush, to more perfectly effect the certain and complete polishing and cleaning of the sheet, as hereinbefore set forth.

9. The bronze-receptacles, constructed as described, with two or more shields to prevent the return of bronze to the cylinder or cleaning-rollers.

10. The rubber seat on the periphery of the cylinder for the griper-blade to close upon, as and for the purposes set forth.

11. The cover or covers, constructed and applied, as shown and described, so as to prevent the escape into the room of any bronzing material.

12. In a cylinder bronzing-machine, the general arrangement of all the parts as hereinbefore shown and described.

122,217.—LAMP.—Emil Boesch, San Francisco, Cal.

Claim.—1. In combination with the tube *h* of the burner, the air-tube *b*, channeled, as described, when said channel communicates with the interior of the tube, as shown at *e*, all constructed and arranged substantially as described.

2. In combination with the chimney-supporting case K and tube *g*, the thimble or ring *m*, arranged to move up and down by the revolution of the case, substantially as and for the purpose set forth.

122,218. — COMBINED WALKING-CANE AND BILLIARD-CUE.—Charles A. Bogert, Bay City, Mich

Claim.—1. A combined billiard-cue and walking-cane, substantially as shown and described.

2. The construction and arrangement of the cue-sections A A', the head B, and ferrule C, substantially as and for the purpose set forth.

122,219. — JOURNAL-BOX FOR RAILWAY CARS.—Russell Brewer, Pontiac, assignor to himself and Lyman P. Tompkins, Lincoln, Ill.

Claim.—1. The oil-box D having the lugs *i'* bent upon it, in combination with the block H having the channels *i*, and the car-axle A, substantially as specified.

2. The block H having the channels *i* with openings *m* to receive the lugs *i'* projecting from the sides of the oil-box D, substantially as and for the purpose specified.

122,220. — CLOTHES-WRINGER. — Jacob Brinkerhoff, Auburn, N. Y.

Claim.—1. The combination of the train of gears *d e f* with the box B so that they shall always move together, and consequently be always in gear with each other while they move up and down with the upper or yielding one of the pair of rolls, substantially as described.

2. I also claim, in combination with the train of gears and the under roll detached from the box B, the counter-shaft E and gears *h j* for driving said under roll, substantially as described.

3. I also claim, in combination with the two-part spring G G, the interposed double-headed supports *m m* for keeping said parts in proper working position, substantially as described.

122,221.—SCHOOL-DESK.—William M. Brooke, Eaton, Ohio.

Claim.—The arms G G, constructed as shown, in combination with seat E and standards A A, with projections *b b*, all so arranged that the arms will fall between the projections while the ends of the seat will rest or be supported thereon, substantially in the manner set forth.

122,222.—MACHINE FOR TURNING STONE.—John Dickinson Brunton, Leighton Crescent, Kentish Town, England.

Claim.—The combination, with a slide-rest, of a discoidal cutter, which may be adjusted, and when brought in contact with a moving block of stone will reduce or shape the latter, as set forth.

122,223.—POCKET-BOOK GUARD. — Calvin G. Cahoone and Augustus W. Robinson, Providence, R. I.

Claim.—The spring-tongue and keeper, substan-

tially as described, for attachment to and in combination with a pocket-book and pocket, as and for the purposes specified.

122,224. — STEAM-ENGINE. — Leander Carman, McCoy's Station, Ohio.

Claim.—In a steam-engine having the open-end cylinder B separated into two compartments, B' B', by the partition C, the arrangement of the steam-passages d d, the intervening wall d^1, perforated for the exhaust d^2, and the D-valve H, all constructed and arranged to operate as specified.

122,225.—KITCHEN-TABLE. — Henry Closterman, Jr., Cincinnati, Ohio.

Claim.—The folding and extensible top B' and supports D E, in combination with the table A C, when constructed and arranged in the manner herein shown, and for the purpose specified.

122,226.—DUMPING-CAR.—Franklin B. Colton, Philadelphia, Pa.

Claim.—1. A car or truck, the body of which consists of two sections, G G', adapted to each other and hung to the frame of the car, substantially in the manner and for the purpose described.

2. The said sections hung to the frame of a car or truck, in combination with the locking and releasing device herein described, or its equivalent.

3. The combination of the said sections with a braking device for retarding their tilting movement.

4. The said sections having adjustable journals or trunnions, in combination with adjustable bearings on the frame of the car or truck.

122,227.—DUMPING-BUCKET.—Franklin B. Colton, Philadelphia, Pa.

Claim.—1. The combination, with a hoisting-bale, of a bucket composed of two sections, A and A', adapted to each other and hung to the said bale, substantially as described.

2. The combination of the above with the self-locking device described, or its equivalent.

3. The combination of the sections with legs H H and rollers or casters h h.

122,228.—HEAD-BLOCK.—John M. Comins, Boscawen, New Hampshire, assignor to himself and Austin G. Kimball, same place.

Claim.—The combination of the head-block A, bar a, racks b, angle-plates c, shaft d, and pinions e, as specified.

122,229.—TURN-TABLE.—William S. Coulter, Ashley, Pa.

Claim.—The locking-bars E, constructed with sloping ends on their upper surfaces, and arranged in relation to the rails B B and D D of the turn-table and permanent track, substantially as shown and described, for the purpose set forth.

122,230.—HOLLOW BEAM.—Joseph W. Cremin, New York, N. Y., assignor of one-half his right to George H. Fairchild, Jersey City, N. J.

Claim.—A hollow metal beam of the form shown, having flanges a a a a and internal, longitudinal, vertical, and horizontal webs or supports, all as set forth.

122,231.—LIQUID-METER.—Joseph W. Cremin, New York, N. Y., assignor of one-half his right to George H. Fairchild, Jersey City, N. J.

Claim.—1. The combination of the hollow arms C C, shaft D, extension d, and the screw a.

2. The combination of the arm C C, shaft D, extension d, screw a, pinion a^1, gear-wheel a^2, shaft e, pinion e^1, and case A, as and for the purpose set forth.

3. The case A A, constructed internally and externally as described and shown, and in two parts, one having on the exterior the flange f and the other the ingress and egress ports.

122,232.—CHEESE-VAT. — Francis E. Day, Kennedy, N. Y.

Claim.—The furnace e, water-reservoir d, pans b, fender m, and tubes g l provided with suitable cocks, all arranged as specified.

122,233.—OPERATING RAILWAY SWITCH.—Arthur C. Devlan, Altoona, Pa.

Claim.—The combination of the screw E on the operating bar D of the switch, the nut F, the box G, and the lever I, the latter being arranged so that the axial line of its fulcrum is in transverse relation with the track, and serving, either directly or by the intervention of gearing, to rotate the nut, essentially as herein set forth.

122,234.—STONE-SAWING MACHINE.—Jacob Dindinger and Christian Henri, New Orleans, La.

Claim.—The crank e fixed on shaft p, and provided with longitudinal slot, the pitman m, forked arm j, ratchet-wheel k, pawl l, and shaft i, all constructed and arranged as shown and described to operate in the manner and for the purpose specified.

122,235.—MODE OF COUPLING CARRIAGES.—William T. Dole, Peabody, Mass.

Claim.—The new or improved axle-connection, substantially as described, composed of the parts D, E, and F, arranged, constructed, and combined essentially in manner, and applied to or for application to an axle and carriage-body or perch, as set forth.

122,236.—THREAD-MEASURING APPARATUS. Leonard F. Dunn, Oneida Community, Oneida, N. Y.

Claim.—1. The combination of the stop N with the friction-wheel H, a movable frame carrying said wheel, subject to control by a weight or spring, as described, the spool-spindle D, and registering mechanism set in motion by the friction-wheel, essentially as herein set forth.

2. The combination, with the lever L, which serves to control the contact of the wheel H with the spool, of the clutch-operating lever R, the friction-clutch F, and loose pulley S on the spool-spindle, whereby an automatic and synchronous action is obtained for the spool and friction-wheel H, substantially as specified.

3. The combination, with the spool-spindle D, of the friction-wheel H, hung so as to be self-adjusting toward or from the spool, when said wheel or its shaft I is arranged to reciprocate in direction of the length of their axes, essentially as described.

122,237.—STUMP-EXTRACTOR. — George E. Dyer, New Sharon, Me.

Claim.—The combination of standards A B B, connecting-rods a a' b, with hook h and its chain, as and for the purpose set forth.

122,238.—LADDER.—Frederick Eells, Walton, N. Y.

Claim.—The slide C, constructed with bevel-edged flange E turned inward, and longitudinal slot D, the clamp-screw F, and crank-nut G, in combination with the ladder A provided with the dovetailed recess B, all constructed and arranged as and for the purpose specified.

122,239. — WINDOW CASING AND SASH.—Marshall M. Ellis, Springfield, Mass., assignor to himself and Frederick R. Ladd, same place.

Claim.—In a window-casing and sash the combination of the hinged piece b with its strip c' there-

on, the aperture b', and the recess a upon the lower sash, all constructed and operating substantially as and for the purpose described.

122,240. — CULTIVATOR. — David Zimmerman Evans, Town Point, Md.

Claim.—1. A cultivator-tooth consisting of a shank, A, and detachable blade B, secured together and to the frame of a cultivator by a single bolt, F, substantially as herein described.

2. A cultivator-tooth consisting of a shank, A, and an adjustable blade, B, secured to the shank, so as to be adjustable thereon, by a set-screw, m, or its equivalent.

122,241. — NEEDLE-THREADER AND SPOOL COMBINED.—George P. Farmer, Brooklyn, N. Y.

Claim.—A needle-threading device, attached to or forming a part of the spool, and constructed substantially in the manner described, so as to enable a needle to be threaded either with loose thread or with thread attached to a piece of work.

122,242.—BEE-HIVE.—Harriet A. Farnam, South Bend, Ind.

Claim.—1. The removable queen-trap E and valve F, both perforated as described, in connection with the exit C of a hive, as and for the purpose set forth.

2. In a hive provided with the removable queen-trap E, the arrangement of the wire-cloth entrance-way D, fringed or raveled at the back part, and there formed with the openings a, as shown and set forth.

122,243. — BORING-BAR FOR FACING THE ENDS OF CYLINDERS. — James Flower, Detroit, Mich.

Claim.—1. The construction and arrangement of the boring-bar A, head B, tool-carrier E, feather C with its inclined plane C^2 moving in the dovetail way b, and the hinged segmental nut D provided with the internal groove d, and radial stop-pin e, as and for the purpose set forth.

2. The construction and arrangement of the boring-bar A, head B, tool-carriers E E', feathers C C^1, and their inclined planes C^2 moving in the ways b b, and hinged segmental nut D D', operating substantially as herein described, for the purpose specified.

122,244. — FIRE-EXTINGUISHER. — Joseph Gardner, Louisville, Ky.

Claim.—1. The provision, in a portable fire-extinguisher, of one or more pairs of reservoirs and a generating-chamber, with which they communicate by two simultaneously-acting cocks or valves, substantially as and for the purpose set forth.

2. In a fire-extinguisher of three, five, or more chambers, the combination of the pipes L M, external cocks N O, and an equalizing-pipe or pipes U, (with or without valves or cocks,) all as set forth.

3. In this connection, the simultaneously-acting cocks N O, communicating from the reservoirs to the mixing-chambers, and exterior to the latter, for the object designated.

4. The provision, in connection with a mixing or generating chamber, of two or more pairs of acid and alkali chambers, arranged and adapted to operate substantially as set forth.

122,245, antedated December 20, 1871.—EXPLOSIVE COMPOUND.—Edwin Gomez, New York, N. Y.

Claim.—The explosive compound, of the materials, and prepared in substantially the manner specified.

122,246.—MACHINE FOR WRAPPING WIRE-CABLES.—John Gray, Cincinnati, Ohio.

Claim.—1. In the described combination with a main frame, A, supported on casters B, and having an operating-winch, K, the revolving spool E exterior to the cable, journaled in the revolving and separable frame F F' H' h', G g G' g' J, or their mechanical equivalents.

2. In combination with the elements of the claim next preceding, the pressure and guide plate O, for the purposes set forth.

122,247.—MACHINE FOR LAYING BRIDGE-CABLES.—John Gray, Cincinnati, Ohio.

Claim.—The wheeled machine or buggy for the simultaneous laying of two or more double strands in the construction of wire suspension-bridges, and consisting essentially of a frame, A, whose >-formed wheels C are adapted to travel on two or more temporary tracks or cables, and whose loosely-revolving reels F F' are adapted to pay out as many double strands, substantially as set forth.

122,248. — STEAM-ENGINE. — Darwin A. Greene, New York, N. Y.

Claim.—1. The within-described inverted-beam engine having the elevated cylinder and shaft, and single loaded beam below, connected and adapted to operate within a rigid cast-iron framing, substantially as herein specified.

2. The friction-gears M^1, slot M^2, and adjustable pin m^2, arranged as represented relatively to the main shaft and to the pump M m, and connection m^1, for the purposes specified.

3. The arrangement of the friction-gears M^1 in line with the pump, and the mounting of the wheel M^1 on the spring-bearing, so as to induce a self-acting adjustment of the frictional contact varying with the change in the resistance of the pump, as specified.

4. The turning piece L L' and link k, arranged and operating relatively to the eccentric hook K' and the rock-shaft arm, as and for the purposes set forth.

122,249. — INCUBATOR.—Henry J. Haight, New York, N. Y.

Claim.—1. The rotary incubator with the movable egg-layers, with their working mutilated racks and wheels, and with the immovable egg-layers with the water-pipes, as described and shown.

2. The combination of the distributing and discharging pipes through the hollow axes and the receiving and discharging tubes through the plugs, as described and shown.

3. The detent, unlocking and locking the spindle of the mutilated wheels, as described and shown.

4. The hollow axes, with the revolving journals and their jointed arms supporting and enabling the rotary incubator to turn, in combination with the distributing and discharging pipes, connected, by means of the plugs, with the receiving and discharging tubes through them, as described and shown.

5. The combination of the water-heating apparatus with the hot-air flues, the water-receptacles, the vapor-chamber, the self-regulator, the movable cone, the self-regulator's rod, and the weight-beam, as described and shown.

122,250.—COVER FOR GAS-RETORTS.—Alonzo F. Havens, Brooklyn, N. Y.

Claim.—1. The rib 2 around the mouth of the retort end, in combination with the V-rib upon the retort cover to guide said cover to place, as set forth.

2. The groove 3, containing plaster of Paris or other cement, in combination with the V-rib on the cover c, as and for the purposes set forth.

3. The cross-bar f, supported by the guides e e upon the cover c, in combination with the hooks r and s upon the retort end, substantially as and for the purposes set forth.

122,251. — REVOLVING HARROW. — Jacob Hill and James G. Stewart, Jonesville, Ind.

Claim.—The combination of the frame A B, roller H with spirally-arranged harrow-teeth d d,

tongue I, and slotted-stepped sliding block J, all constructed and arranged substantially as and for the purposes herein set forth.

122,252.—Steam-Boiler Tube-Bushing.—Francis R. Hulbert, Grand Rapids, Mich.

Claim.—1. The inner and outer tubes *e* and *f*, in combination with the double tube-sheets *b*, the outer tube sheets being provided with orifices for receiving the bushing of the inner tubes, and made large enough to allow the removal of the larger tubes through them when the bushings are removed, as herein shown and described.

2. The hollow bushing *e'*, as specified.

3. The outer tube *f*, inner tube *e*, hollow bushings *e'*, and double tube-sheets *b*, all arranged together, as explained.

122,253.—Table for Emery-Grinders.—James L. Jackson, New York, N. Y.

Claim.—1. The carriage, composed of the lower frame D running on the shears, the bed E movable transversely on the said frame, and the face-plates F F movable lengthwise on the said bed, the whole combined substantially as herein described.

2. The combination, with the two face-plates and bed E, of the clamp-bar H connected with the face-plates by screw-clamps G G, and furnished with sliding blocks I I and clamping-screws J J, substantially as and for the purpose herein described.

3. The combination of the shears B, rollers C C, axles *c c*, rods N N, and slots *g* in the lower frame D of the carriage, the whole arranged substantially as described, for the purpose set forth.

122,254.—Dental Forceps.—Peter N. Jacobus, Montague, N. J.

Claim.—1. The combination of the cross-piece D with the lesser jaw B and main jaw A having a cross-handle, C, essentially as described.

2. The combination of the finger-guard E with the cross-piece D of the jaw B, and cross-handle C of the jaw A, substantially as specified.

122,255.—Making Steel Castings.—William Kelly, Louisville, Ky.

Claim.—1. The process herein described of preventing cracking, porosity, or other defects in steel castings by the employment of copper or its equivalent in a mold of sand, substantially as herein set forth.

2. I also claim pouring fluid steel into a mold while in a vertical position, and turning the same soon after pouring into a horizontal position to allow it to cool, substantially as and for the purpose set forth.

3. I also claim mounting the flask on journals, substantially as described, so that when turned over, the clamps being released, the drag, with the castings, will be thrown forward and thus free the casting from binding.

4. I also claim in the apparatus the combination and arrangement of the flask with the floor-frame, the copes, the clamp-bar, set-screws, and trigger, all constructed substantially as described, for the purposes set forth.

122,256.—Presser-Foot Lifter for Sewing-Machines.—Theodore W. Kennedy, New York, N. Y.

Claim.—1. The presser-lifter A', constructed with an elongated straight edge, *i'*, in front for operation in relation with the back of the presser-foot bar or of the latter relatively to it, substantially as specified.

2. The presser-foot lifter A', constructed with a tooth or shoulder, *h*, at its base in front for support to the lifter by the presser-bar or frame C, essentially as herein set forth.

3. The combination of the straight edge *i'* and tooth or shoulder *h* formed in or on the presser-foot lifter A', substantially as shown and described.

122,257.—Mechanism for a Reed-Organ Swell.—Michael J. Kerigan, Boston, Mass.

Claim.—The adjustable knee-lever G, as combined with and arranged in the case, and with the actuating lever E of the swell-operating mechanism, all substantially as described.

122,258.—Preserving Eggs.—John Knapp, Prattsburg, N. Y.

Claim.—The combination of the inner box D, its surrounding coating of plaster Paris C, and the outer box A for the packing and preserving of eggs, as specified.

122,259.—Screw-Press.—Lucius J. Knowles, Worcester, Mass.

Claim.—1. The combination, with the screw E and platen D of a screw-press, of devices for operating the same, constructed and arranged substantially as herein shown and described, whereby the press may be operated either by power or by hand.

2. The combination, with the platen D, screw E and press top, of the reversible ratchet device *g k*, hand-lever L, nut K, gear I, and worm-shaft P N, substantially as and for the purposes set forth.

3. The frame of the press, constructed as herein described, of the standards A, transoms or cross-pieces G, and wrought-iron trusses F with welded ends *a*, combined and arranged substantially as shown and set forth.

4. The combination, with the top of the press and screw E, of the bearing piece H and revolving nut K, constructed and operating substantially as and for the purpose set forth.

5. The combination, with the screw E, standard A, and platen D, of the revolving nut K, gear I, worm P, shaft N, and frame M, substantially as shown and described.

122,260. — Method of Cutting Cloth.—Eliza J. Lake, Washington, D. C.

Claim.—The process herein described of simultaneously cutting many folds or layers of fibrous or textile fabrics by the use of a scroll-saw.

122,261. — Plow. — Daniel Martin Lamb, Strathroy, Canada, assignor to himself and Van Rensselaer Warren, Somerville, Mass.

Claim.—The combination of the corrugated bearing-wheel A and subsoil attachment C C D with a plow, in manner substantially as and for the purpose specified.

122,262. — Ruling-Machine. — Dorus W. Landvoigt, Washington, D. C.

Claim.—The vibratory pen-lifting-plate D, pivoted in adjustable bearings E, and actuated by the extensible cam *b b* independently of the cam-actuated pen-clamp B, substantially as and for the purposes herein described.

122,263.—Head-Block for Saw-Mills.—Dennis Lane, Montpelier, Vt.

Claim.—1. In a sawing-machine, the pivoted dog F, in combination with the pawl G and segmental rack G', substantially as specified.

2. The sliding rack L applied to the carriage of a sawing-machine, the shaft M and the dog O, in combination with the setting-up bar C, rope or chain L^2, and pulley L, substantially as described.

122,264.—Railway Car-Brake. — Chancy H. Lathrop, Jersey City, N. J.

Claim.—The supplementary shaft section F^2 with its universal coupling F^0, in combination with the shaft section F^1 from which it derives its motion, when said shaft sections are arranged in relation with each other and the vehicle to which they are applied, substantially as specified.

122,265. — Copying-Press. — Arthur Le Clercq, New York, N. Y.

Claim.—The combination of two sets of rollers, B C B' C', with each other and with a tank, D, substantially as and for the purpose herein shown and described.

122,266.—Electro-Magnetic Apparatus. George Little, Rutherford Park, N. J.

Claim.—1. An oscillating armature and two helices connected to the main line, in combination with a local circuit connected with one of the helices, substantially as and for the purposes set forth.

2. An oscillating armature upon a fulcrum connected with the cores of two electro-magnets, in combination with two electric circuits connected with the helices of such magnets, substantially as and for the purposes set forth.

3. The screw-rod *k* of the rheostat, combined with the adjuster *h* and coil *e* to regulate the position of said adjuster, substantially as set forth.

122,267.—Rheostat or Resistance-Coil.—George Little, Rutherford Park, N. J.

Claim.—The conductor *k*, sliding block *m*, and spring *o*, in combination with the coil *e*, heads *a b*, and bar *l*, substantially as and for the purposes set forth.

122,268.—Mechanism for Operating Attachments in Sewing-Machines.—Joseph W. Lyon, Chicago, Ill.

Claim.—The stop E placed either beneath or penetrating through the lever D and secured in the disk B, as described, in combination with the lever C and base piece A and link D d^2, all constructed and operating as set forth.

122,269.—Valve-Gear for Steam-Engines. John C. Macdonald, St. Louis, Mo.

Claim.—1. The cylindrical stop-valve E' formed in sections F F' having heads *f f'*, D-shaped ports d^4 d^5, when arranged to operate as and for the purpose set forth.

2. The arrangement of auxiliary cylinders B and E, piston B^1, double valve-heads C C, reverse slide-valves D D, cylindrical stop-valve E', constructed to operate in combination with main cylinder A, substantially as and for the purpose set forth.

3. The arrangement of steam-passages or ports *b b'*, steam-chambers G G', in combination with auxiliary cylinder E and cylinder A, substantially as and for the purpose set forth.

4. The arrangement of inductive and exhaust ports *c c'*, D-ports c^3 c^3, ports and passages c^4 c^5 c^6, in combination with cylinders B E, cylindrical stop-valves E', and main cylinder A, substantially as and for the purpose set forth.

5. The auxiliary cylinders B E, valves E D D, steam-ports *c c' b b'* c^4 c^5 c^4 c^5, arranged in combination with steam-chest A^3, cylinder A having main ports *a* a^1 a^2 a^3, piston A^1, when all said parts are constructed and arranged to operate as and for the purpose set forth.

122,270, antedated December 23, 1871.—Shears for Cutting Metal. — George M. Marshall, New Haven, Wis.

Claim.—1. The combination and arrangement of the standard A furnished with a trunnion, T, and lugs or pins L M, the moving-plate C having curved slot K, and the tie or retaining-bar N, substantially as described and shown.

2. The construction and arrangement of the lever E and its bearing in the moving plate C, furnished with the arm *n*, lateral continuation *p* passing through the opening *r*, as specified and shown, and for the purpose set forth.

122,271.—Railway-Switch. — William L. Martin, Rienzi, Miss.

Claim.—1. In combination with the sliding rails D D of a railroad switch, the stationary check-rails G G bolted to the cross-ties E E, and arranged on one or both sides of the moving rails, as and for the purposes set forth.

2. The combination of the chairs H I with shoulders or abutments *b b* and the keys *d d*, substantially as and for the purposes herein set forth.

122,272.—Steam-Trap.—Hiram S. Maxim, Brooklyn, N. Y.

Claim.—1. The expansible vessel *c*, resting upon the supports *d* within the case *e*, and acting upon the independent valve *a* that has its seat *b* at the end of the pipe, through which the water of condensation is delivered into the case *e* to pass away below the vessel *c*, as and for the purposes set forth.

2. The cylindrical removable plug *m* and strainer *k*, in combination with the valve *a* and expansion vessel *c*, as and for the purposes set forth.

122,273.—Deodorizing the Gases from Lard-Boiling, &c.—William H. McNeill, West Orange, N. J.

Claim.—1. The method herein specified of deodorising the vapors from the rendering-vat or kettle by subjecting the same to the action of a disinfectant previous to passing to the condenser, substantially as set forth.

2. The vat *b*, containing sawdust or equivalent material, saturated with disinfecting liquid, through which vapors from the rendering-vat or kettle pass before reaching the condenser, for the purposes and as set forth.

122,274.—Belt-Pump.—Samuel C. Murdoch and Thomas H. Borland, Pittsburg, Pa.

Claim.—The compartment *s*, chamber *t*, arranged with relation to the openings *r* and *s*, as shown, and used combined with the flat flanged disks *k*, all constructed, arranged, and operating with relation to each other, as herein described.

122,275.—Turbine Water-Wheel.—Matthew W. Obenchain and John T. Obenchain, Loganasport, Ind.

Claim.—The turbine herein described, consisting of the conical body A, the ring E, and the flanched ovoid buckets C, having their centrifugal discharge beyond the vertical plane of the inlet, and surfaces gradually increasing in curvature from the inlet to the junction with the ring, and terminating in full semicircular or elliptical outlet-lips lying nearly in radial planes, as specified and shown.

122,276, antedated December 14, 1871.—Tobacco and other Presses.—Nathaniel M. Pepper, Danbury, N. C.

Claim. — The arrangement of the tanks F F', cords or chains *e e'*, beam or hook *d*, lever E, presser-block H, standard B, and framing D D C, all constructed and operating substantially as herein shown and described, for the purpose set forth.

122,277. — Journal-Bearing and Lubricating Device. — Dabney N. M. Peregoy, Johnson City, assignor to himself, Robert I. Lusk, and Lorenzo D. Poteet, Elizabethtown, Tenn.

Claim.—1. The bushing or bearing B provided with one or more loose followers, C, acted upon by one or more keys or wedges, E, or their equivalents, arranged substantially as described, and for the purpose set forth.

2. The bushing B, followers C, keys E, in combination with weights or equivalent devices, arranged and operating substantially as set forth, and for the purpose specified.

3. The bushing B provided with the concave *l*, in combination with the lubricating mechanism F, substantially as described.

4. The pipe F constructed as described, in combination with the concave *l* of the bushing B, and operating, in reference to the shaft, substantially as described.

122,278.—Slide for Extension Tables.—James Ploukharp, Columbus, Ohio.

Claim.—The form of the metal connection, shown on Figs 3 and 4, marked with letters of reference *a b c d*, in combination with the rails or slides fitted with grooves for adjustment, in the manner shown and described.

122,279.—Bee-Hive.—James S. Procter, Franklin, Ky.

Claim.—The comb-frames B, constructed, as described, with guides *f* and slots *e e'*, substantially as and for the purposes herein set forth.

122,280.—Clothes-Drier.—Zenas B. Putnam and Henry H. McDonald, Belfast, Me.

Claim.—The combination of the frame A, provided with the projecting upper bar *g* and hinged racks *b* and *c*, substantially as and for the purpose specified.

122,281.—Composition for Liquid Soap.—James M. Ball, St. Louis, Mo., assignor to William W. Thomas, same place.

Claim.—A liquid soap, composed of quick-lime and sal-soda in about equal parts, with a moderate quantity of borax, carbonate of ammonia, saltpeter, and spirits of turpentine, together with sufficient water to retain the whole in solution, as specified.

122,282.—Horse Hay-Rake.—Samuel Rockwell, Moline, Ill.

Claim.—1. The combination of the axle A with clearers M, shafts D D hinged upon the axle, rake-head G hinged upon the shafts, and rod k connecting the rake-head and axle, when constructed and arranged to operate substantially as and for the purposes herein set forth.

2. The combination, with the above, of the locking-rod K, spring *m*, and catch L, substantially as and for the purposes herein set forth.

122,283.—Machine for Tentering Cloth.—George S. Rogers, Thetford, Vt.

Claim.—The combination of the drying-drum B, the two series of slides C C, tenter-hooks *f*, and riders *g*, arranged to operate together, as set forth, and with guides E F G and draft-rollers I K, and provided with mechanism for moving each slides longthwise, all being constructed and to operate substantially as specified.

122,284.—Furrowing-Plow.—Abraham P. Rohrer, Christian F. Rohrer, and John H. Bluse, Clarke county, Ohio.

Claim.—1. The arrangement of the pivoted or balanced frame C, projecting frame *b*, foot-board *b'*, slide *i*, slot *i'*, and loop *j*, as shown and described, as and for the purpose set forth.

2. Spring-catch *s*, guide-plates *s'*, and plates *o*, arranged and combined with back rail *a'*, plow-beams *a''*, and handles *m*, substantially as shown and described, as and for the purpose hereinbefore set forth.

122,285.—Machine for Untwisting and Picking Hair-Ropes.—Gelston Sanford, Bergen Point, N. J.

Claim.—1. The combination of the feed-rollers C D and rotating internally-threaded untwisting tube G, substantially as and for the purpose herein set forth.

2. The combination of the feed-rollers C D, the picker-cylinder E, and the interposed rotating internally-threaded untwisting tube G, substantially as and for the purpose herein described.

122,286.—Combined Band-Punch and Screw-Driver.—George W. Schofield, United States Army.

Claim.—The combination of the handle A and the blade B thereon, both slotted, the recess *f f'* in blade D, and pivot *e* with the double punch *c c*, all substantially as and for the purpose described.

122,287.—Shoe-Fastening.—John Slatcher, Bridgeport, Conn.

Claim.—The apparatus, herein described, for fastening and unfastening shoes, consisting of the spring A, tongued plate B, loop-plate C, and hooks *c* and F, constructed and arranged substantially as specified.

122,288.—Sash-Balance.—Hiram Smith, Titusville, Pa.

Claim.—The spring-pulley balance, consisting of the pulley *a* and spring *a'*, attached, by one end, to the periphery of the pulley, and wound compactly so as to wind and unwind directly thereon in effecting the balance of the sash to which it is attached, and thereby avoid the objection of separate loose coiled adjustable springs and pulley-straps, as described.

122,289.—Disintegrating Waste Vulcanized Rubber.—Jacob H. Sinyser, Pittsburg, Pa.

Claim.—Comminuting waste vulcanized India rubber or caoutchouc by subjecting it to the abrading action of burr or grindstones, emery, sand, or glass belts or wheels, substantially as and for the purpose described.

122,290, antedated December 23, 1871.—Lightning-Rod.—Charles P. Snow, Freeport, Ill.

Claim.—1. A lightning-rod constructed of a flat strip of zinc or other strengthening metal surrounded by a strip of copper, substantially as and for the purpose specified.

2. In combination with a flat lightning-rod, A B, the point C, when united by compressing the rod B into the recess *c*, in the manner substantially as set forth.

122,291.—Filter.—Horatio N. Taft, Sag Harbor, N. Y.

Claim.—1. A reversible filter having valves J, by means of which the flow of the water or other liquid is automatically controlled, substantially as described.

2. The chambers K K, or their equivalent, in combination with tubes C C and valves J J, substantially as and for the purpose described.

3. The interior cylinder or part E, with perforated partitions F F therein, surrounded by the annular filtering-space P, as shown and described.

4. The perforated diaphragm or false heads G G, in combination with the inner cylinder E, substantially as described.

5. The trunnions T T, in combination with a reversible filter, when the filter is constructed substantially as described.

6. The arrangement of the discharge-cocks S S, in combination with a reversible filter, when the filter is constructed substantially as described.

7. The combination of valves J J with the interior cylinder or vessel E, as and for the purposes described.

122,292.—Watchman's Time-Check.—Louis A. G. Vielle and Jean La Robellas, New Albany, Ind.

Claim.—The interior removable door E provided with projections *f f*, lock k, glass-covered aperture *i*, stationary hand *m*, guide-bar H, notched sliding plate G, spring-pawl I, and punch *t*, in combination with the clock-work C and the revolving dial D, all constructed, arranged, and operating substantially as and for the purposes set forth.

122,293.—Heating-Stove.—James Wager, Troy, N. Y.

Claim.—1. In an open-top parlor cook-stove, a

cover hinged to or sliding upon the stove and carrying a secondary cover provided with suitably-covered boiler-holes pivoted or sliding upon it, as described.

2. The combination of the solid central portion D of the cover B with the hollow convex-shaped covers *c* covering the boiler-holes C, so as to form, with the part D, an entire ornamental top, as described.

122,294.—Curtain-Fixture.—Thomas N. Webb, Baltimore, Md.

Claim.—As unattached holding-plate A, carried by the roller-cord E, and having open recessed notches *a b* in the edge or edges thereof, in combination with a fixed pin, *c*, for regulating the tension of the cord, as described.

122,295, antedated December 12, 1871.—Apparatus for Setting Boxes in Carriage-Hubs.—Charles Weidig, New Haven, Conn.

Claim.—The herein-described apparatus for setting boxes in carriage-hubs, consisting of the bed A provided with the seat F, and with rods B pivoted thereto, combined with the head D and screw E, the whole constructed and arranged to operate substantially in the manner set forth.

122,296.—Composition Roof.—Edward Westermayr, Chicago, Ill.

Claim.—1. The combination, with the fibrous foundation B, of an artificial stone surface, C, laid on while moist and plastic, substantially as specified.

2. The composition artificial stone for roofing purposes, compounded in the manner, proportions, and ingredients, substantially as herein specified.

122,297.—Carpet-Beater.—John W. Wheeler and William A. Wheeler, Cleveland, Ohio.

Claim.—1. The combination of the oscillating beaters B B, the pulleys E and G, and the flexible belts F F in a carpet-beating machine, substantially as described, and for the purpose set forth.

2. The shaft D and its beaters B, pulleys E and G, rollers N N, cross-shaft Q, and blower K, combined and arranged with the chamber A, in the manner and for the purposes set forth.

122,298.—Machine for Filling Fruit-Cans and for Cleaning off the Tops of the same.—Loren J. Wicks, Bridgeton, N. J., assignor to himself, William Selser, C. N. Selser, J. A. Selser, and G. W. Turner, Philadelphia, Pa., and John H. Poole, Bridgeton, N. J.

Claim.—1. A machine for filling cans, in which the material is forced by a plunger or plungers through a casing arranged to fit into or over the mouth of the can, all substantially as described.

2. The casing F tapered at its opposite ends, arranged to have a limited sliding movement, and furnished with plungers I and J, arranged one within the other, and operating in respect to each other and to the casing, substantially as described.

3. The combination of the lever D and its tongue *e* and shoulders *f* with the plungers J and I, substantially as specified.

4. The combination of the inclined chutes G and their flanges *s* with the flaps H, for the purpose of retaining the cans in a proper position in respect to the casing F.

5. The hinged flaps H, when so balanced or weighted as to sustain an empty can, but so as to yield to the weight of a filled can.

6. The perforated casing K, for the purpose specified.

7. The combination of the said perforated casings with the slide L, operated substantially as described, and with the receivers M and M' attached to the said slide.

8. The combination of the said receivers with the cross-piece N and its openings, and with the hoppers h of the casing F, all substantially as set forth.

9. The combination of a fixed or rotating pipe, R, with devices substantially as herein described, whereby the tops of filled cans may be brought within range of a jet of steam, or air under pressure, from the said pipe.

10. The combination of the pipe R, revolving disk *p*, and lever W with its flanged openings *r*, for the reception of cans, all substantially as described.

11. The combination, substantially as herein set forth, of the operating lever D, lever W, and lever S, with its toothed segment for driving the vertical spindle T.

122,299.—Grain-Drill.—Lyman Wight and Orison G. Ewings, Whitewater, Wis.

Claim.—1. The combination, with one common frame, of the broadcast-seeder and cultivator, a grain-drill, a corn-planter, and a corn-cultivator, substantially as herein shown and described, for the purpose specified.

2. In combination with the crank-pinion W the pivoted bracket X and the spring-arm H^1, we claim the lever F^1 and connecting-rod I^1, substantially as described, for the purpose specified.

3. The open-backed tube L^1, constructed with an inclosed head, and with its widened mouth provided with the diamond-shaped pins, arranged as described, said tube being hinged to the under side of the hopper, substantially as herein shown and described.

4. The spring-pivot yoke O^1, in combination with the tube L^1 and the ears *n'* of the hopper, substantially as described, for the purpose specified.

5. The corn-planter, supported by the frame of the machine and the hopper of the seeder and drill, and adapted for operation from one of the driving wheels of the seeder and drill, substantially as described, for the purpose specified.

6. The corn-planter adapted for use in connection with two of the tubes of the drill by means of the bent tubes L^2 for the purpose of planting one or two rows of corn in drills, substantially as herein shown and described.

7. The corn-cultivator, mounted upon the frame of the seeder, drill, and corn-planter, and adapted for operation in connection with the drag-teeth, substantially as described, for the purpose specified.

8. The broadcast-seeder, the grain-drill, the corn-planter, and the drag-teeth, all adapted to be thrown in and out of operation by the movements of one common lever and lifting-bar and their intermediate connections, substantially as herein shown and described.

9. The seed-plate of the corn-hopper, operated from one of the driving-wheels of the drill and seeder by means of the pinion P^2 and grooved pulley J^2 upon the shaft e^2, the belts F^2 I^2, grooved pulleys G^2, and a grooved pulley upon the hub of the wheel, substantially as herein shown and described.

122,300.—Seeding-Machine.—Lyman Wight, Whitewater, and Orison G. Ewings, La Grange, Wis.

Claim.—1. A feeder for seeding-machines, consisting of an inverted serrated cup adapted to oscillate or rotate within an opening in the grain-hopper so that the seed shall pass inside the cup before being discharged from the hopper, substantially as described, for the purpose specified.

2. The adjustable grain-feeder, consisting of an oscillating cup, C, mounted upon a crank-shaft, D, the slotted adjustable bracket E, and the toothed cam F, substantially as described, for the purpose specified.

3. In combination with the slotted bracket E carrying the feed-cup, we claim the spur G and graduated toothed cam F, substantially as described for the purpose specified.

4. The slotted bracket E, constructed as described, with the eye H, slotted arm I, and spur G, substantially as described, for the purpose specified.

122,301.—Propelling Vessels.—Matthew K. Wildman, Brooklyn, N. Y.

Claim.—1. The propellers D D', arranged one in advance of the other, and of opposite pitch, as described, made to rotate in reverse directions at different velocities, by means of the differential gear *b b'* and *c*, essentially as herein set forth.

2. The arrangement of the rudder E within the rear end of the passage C, between the hull sections, so as to be capable of wholly closing either side of the outlet of said passage, substantially as shown and described, for the purpose set forth.

122,302.—Bee-Hive.—Alonzo E. Woodhull, Spencer, Mich.

Claim.—1. The detachable paper boxes D and D' for forming with the hive A two fixed air-chambers over the bees to protect them from the extreme cold of the winter, constructed and arranged substantially as described and shown.

2. In a bee-hive the hollow truncated cone G provided with the valve H and guide-wire *k*, constructed, arranged, and operating substantially as and for the purpose set forth.

122,303.—Thrashing-Machine.—Gustavus H. Zacheeh, Indianapolis, Ind.

Claim.—The levers G G, adjusting-screw J, and hinged arms E, in combination with the apron C and grate D of a thrashing-machine, constructed and arranged to operate as described, and for the purpose set forth.

REISSUES.

4,680. — Roller and Fastening for Clothes-Wringers.—Robert B. Huguenin, Cleveland, Ohio, assignor to Albert H. Spencer, Providence, R. I. — Patent No. 53,001, dated March 6, 1866.

Claim.—1. Shaft-fastened elastic rollers, when made in combination with hollow or slotted metal shafts, with two or more openings in the same, having two or more pieces of cloth or wire-cloth, or both combined, prepared with raw-rubber compound, passed through the openings of the shafts, and the sides of the pieces of cloth or wire-cloth lapped around, and elastic vulcanizable gum vulcanized thereon, substantially as and for the purposes specified.

2. The combination of the clamps H H, thumb-screws I I, and screw-plates J J, substantially as described, and for the purposes specified.

3. A clamping device, consisting of a stationary plate, a propelling-screw, and a bearing-surface having a prolonged shank or body which embraces part of the propelling-screw, and is so arranged as to be withdrawn into a recess of such form as to prevent the rotation of the clamp with the screw, substantially as and for the purpose herein specified.

4. The combination of the springs E E and adjusting-screw F, when the springs are both free to rise and fall in the slots of the uprights, and the thumb-screw operates between them to increase or diminish their distance from each other, substantially as set forth.

5. The combination, in a wringing-machine, of two elastic rollers set in suitable uprights and bearings, with the two springs E E arranged so as to be separated more widely by any increase of their tension imparted by the adjusting-screw F or its equivalent, substantially as and for the purpose specified.

4,681.—Thill-Coupling.—Daniel A. Johnson, Boston, Mass.—Patent No. 113,525, dated April 11, 1871.

Claim.—1. A yoke, A, provided with a socket, whether made in one and the same piece therewith, or partially in a piece separate therefrom, substantially as described.

2. I also claim a yoke, A, provided with a socket, whether made in one and the same piece therewith, or partially in a piece separate therefrom, in combination with the packing H, band D, lugs F F', screw I, and plate C, substantially as and for the purpose set forth.

3. I also claim the lug F or F', provided with a projection J, as and for the purpose described.

4,682.—Pump-Rod Attachment. — Henry H. Locke, Pleasantville, Pa., assignor to Douglas Bly, Rochester, N. Y.—Patent No. 103,632, dated May 31, 1870.

Claim.—The combination of the clamping-bolt C with the cross-head A for the purpose of allowing the adjustment and producing the clamping of a pump-rod, as specified.

4,683.—Method of Cooling and Ventilating Rooms. — Azel S. Lyman, New York, N. Y. — Patent No. 14,510, dated March 25, 1856; extended seven years.

Claim.—1. As my improvement in cooling, drying, and disinfecting rooms, the combination of a descending conduit or cold-air flue with a reservoir for containing cooling materials, substantially in the manner and for the purposes described.

2. In a cooling or ventilating apparatus, substantially as herein described, I claim the use of tubes in the reservoir or receptacle of cooling material.

4,684.—Copper Alloy for Plow Mold-Boards, and for other Purposes. — William Magee, Jamaica, N. Y.—Patent No. 119,091, dated September 19, 1871.

Claim.—The composition, consisting of the ingredients herein stated, used in such proportions as to secure the positive preponderance of copper, so that this metal shall form the basis of the alloy, substantially as described, as and for the purpose stated.

4,685.—Expanding Pulley.—Thomas H. Savery, Wilmington, Del.—Patent No. 78,763, dated June 9, 1868.

Claim.—1. An adjustable sectional pulley, substantially as hereinbefore set forth.

2. The combination of a rotating shaft and an adjustable sectional pulley, substantially as hereinbefore set forth.

3. The combination of a sectional pulley with mechanism for varying its diameter when the pulley is at rest, substantially as hereinbefore set forth.

4. The combination of a rotating shaft, a sectional pulley, and mechanism for adjusting the diameter of the pulley while in motion, substantially as hereinbefore set forth.

5. The combination of the radially-adjustable pulley-sections and the scroll-wheel, or their equivalents, substantially as hereinbefore set forth.

6. The combination of the hand-wheel and adjustable pulley-sections by connecting mechanism, substantially as hereinbefore set forth.

7. The combination of the rotating shaft, the hand-wheel turning freely thereon, the gear-wheel carried by the hand-wheel, the adjusting mechanism revolving with the shaft, and the adjustable sections—these members operating in combination, substantially as hereinbefore set forth.

8. The combination of the shaft, the radially slotted face-plate, and the pulley-sections having arms movable endwise in the slots, substantially as hereinbefore set forth.

4,686.—Manufacture of Gun-Barrels.—James Henry Burton, Leeds, England, assignor to James T. Ames.—Patent No. 27,539, dated March 20, 1860; antedated September 29, 1859.

Claim.—1. The process of manufacturing gun-barrels by first perforating a solid bar of wrought metal, and then tapering from breech to muzzle, and reducing the thickness of the shell at the same time that the bore of the barrel is uniformly decreased, as set forth.

2. A pair of rollers provided with the series of gradually decreasing and tapering grooves *a*, combined with a series of gradually diminishing and relatively smaller mandrels, but each one uniform in its own diameter, when constructed and arranged as and for the purpose set forth.

3. A gun-barrel made of wrought metal, tapering in external form, of cylindrical bore, and without weld or seam, as described.

DESIGNS.

5,447. — Center-Piece. — Henry Berger, New York, N. Y.

Claim.—1. The combination of the spherical triangles B with the central button A of a center-piece, as shown and described.

2. The combination of the escutcheons C with the spherical triangles B and central button A of a center-piece, as shown and described.

3. The spread leaves D, in combination with the escutcheons C, spherical triangles B, and central button A, as shown and described.

5,448.—Cooking-Range.—Luther W. Harwood, Troy, N. Y., assignor to Fuller, Warren & Co., same place.

Claim.—1. The design for the front plate A and end plates B C, as herein specified.

2. The design for the molding E, as described.

3. The combination of the border-molding E and pendent panel ornament or ornaments I, with or without an intervening molding, J, as herein set forth.

4. The design for the grate-shank door K, as described.

5. The words "Hot-Blast Range," composed of letters shaped and arranged together on a plate of a stove or range in the ornamental manner herein described.

5,449.—Hand-Stamp. — Benjamin B. Hill, Springfield, Mass.

Claim.—The design for a marking-stamp, substantially herein described and shown.

5,450.—Type.—Andrew Little, New York, N. Y.

Claim.—The design for printing-type, as shown.

5,451.—Cooking-Range.—Samuel P. Robinson, Plainfield, Conn., assignor to Robinson & Fowler Foundry Company, same place.

Claim.—The design for a portable cooking-range, as shown.

TRADE-MARKS.

600.—Boots and Shoes.—John W. Adams, Indianapolis, Ind.

601.—Whisky.—A. W. Balch & Co., New York, N. Y.

602.—Whisky.—A. W. Balch & Co., New York, N. Y.

603.—Spices, Groceries, and Drugs.—E. R. Durkee & Co., New York, N. Y.

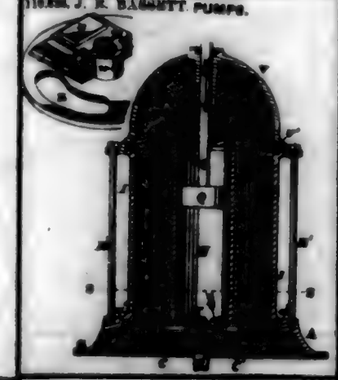
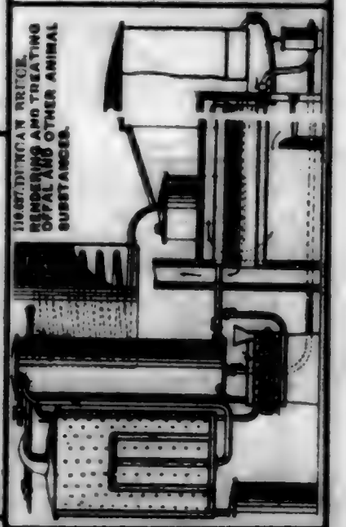
ILLUSTRATIONS.

ILLUSTRATIONS OF PATENTS
ISSUED FROM
THE UNITED STATES PATENT OFFICE
JAN. 3, 1871.

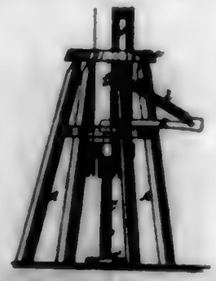


110,617. THEODORE T. ABBOT.
JOHN A. V. SMITH.
FLIERS FOR SPINNING-MACHINES.

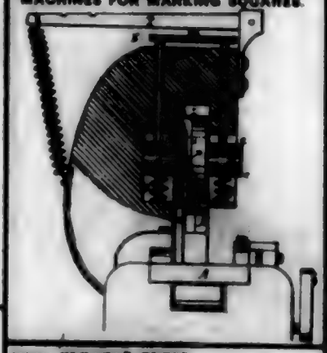


110,618. SANFORD J. BAKER.
FETTERS OR CLOGS FOR FOWLS.

110,619. J. R. BARNETT. PUMPS.



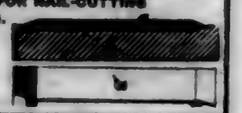
110,620. DUNCAN BRUCE.
RENDERING AND TREATING OFFAL AND OTHER ANIMAL SUBSTANCES.



110,621. W. W. BRADLEY.
COMPOUNDS FOR CULINARY USE.

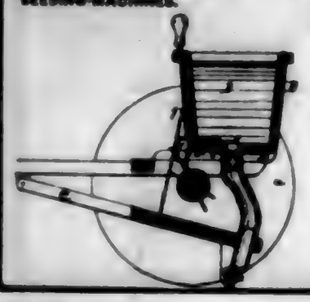
110,622 JOHN ADAMS. MOLE-TRAPS.

110,623. CHARLES C. BENNET.
MACHINES FOR MARKING SQUARES.

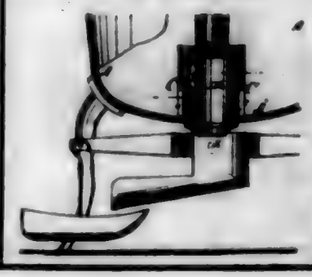


110,624. W. B. BURNETT.
PAINT-BRUSHES.

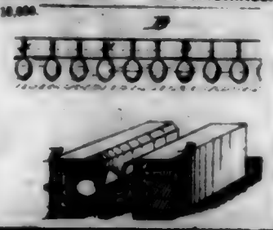
110,625. ELIJAH C. ALLEN.
STONE-DRAGS.



110,626 HIRAM H. BLISS.
CUTTERS FOR NAIL-CUTTING MACHINES.

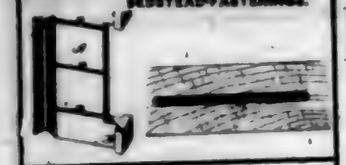


110,627. JOHN C. CAMPBELL.
WARREN B. BRUCE.
HOG-SNOUTERS.

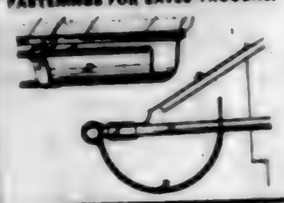


110,628. ARMER S. HARRIT.
SEEDING-MACHINES.

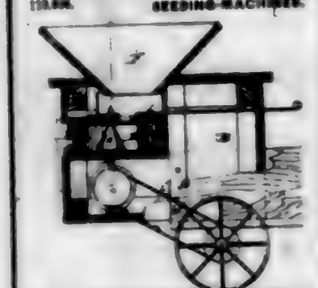
110,629. SINCLAIR BOOTON.
SHOT-CASES AND DISTRIBUTERS.



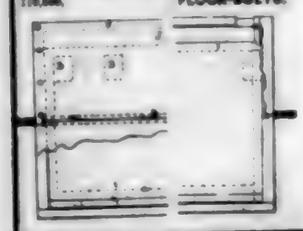
PIERRE CAUHAPE. PILL-MACHINES.
110,630.



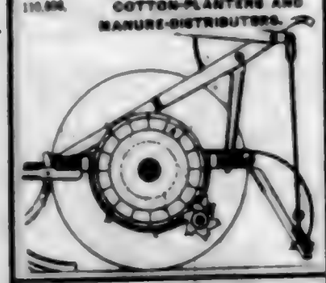
110,631. JOHN E. COFFIN.
PAPER-CUTTING MACHINES.



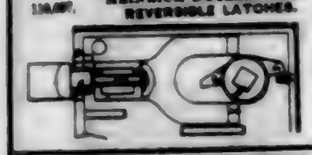
110,632. CHARLES S. COMINS. BOLT-FASTENINGS.



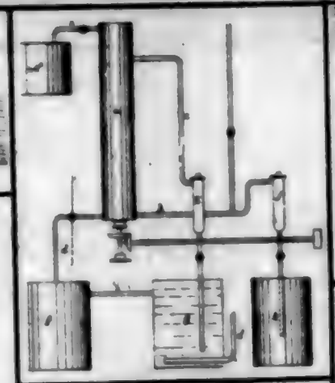
110,633. LEONARD COOK. FASTENINGS FOR EAVES-TROUGHS.



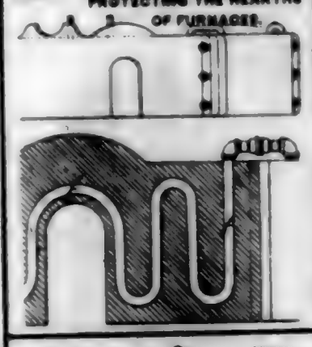
110,634. JACKSON OZAD. SEEDING-MACHINES.



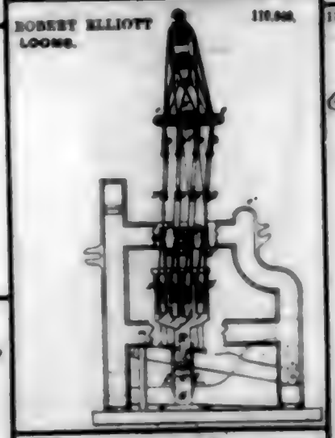
110,635. ROBERT W. CUNNINGHAM. FLOUR-BOLTS.



110,636. HIMROD DONALDSON. COTTON-PLANTERS AND MANURE-DISTRIBUTERS.

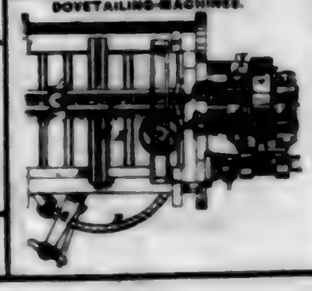


110,637. HENRICH DOTERNOTH. REVERSIBLE LATCHES.

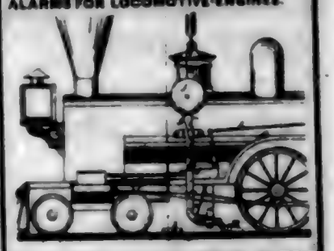


110,638. RICHARD EATON. REFINING PETROLEUM.

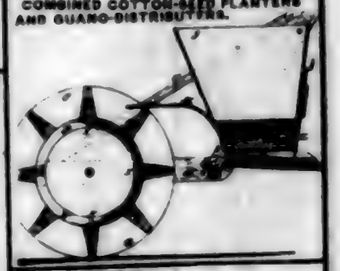
110,639. HENRY WILLIAM ELLICOTT. PROTECTING THE HEARTHS OF FURNACES.



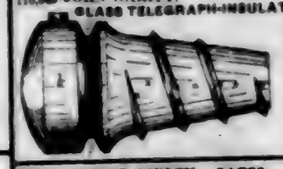
110,640. ROBERT ELLIOTT. LOOMS.



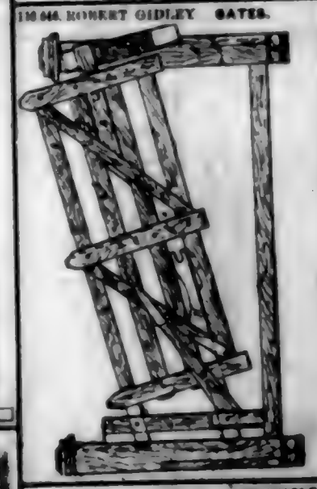
110,641. WILLIAM EWEN. VENTILATORS.



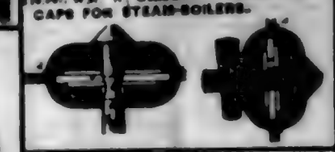
110,642. HARRY H. EVARTS. DOVETAILING-MACHINES.



110,643. REED A. FILKINS. ALARMS FOR LOCOMOTIVE-ENGINES.



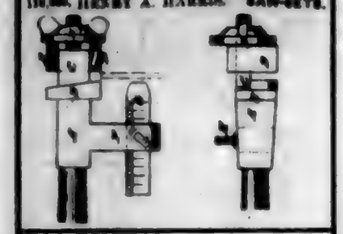
110,644. LAFAYETTE GANTT. COMBINED COTTON-SEED PLANTERS AND GUANO-DISTRIBUTERS.



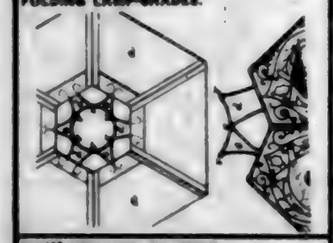
110,645. JOHN GARITY. GLASS TELEGRAPH-INSULATORS.

110,646. ROBERT GIDLEY. GATES.

110,647. WM. W. GRAHAM. HAND-HOLE CAPS FOR STEAM-BOILERS.



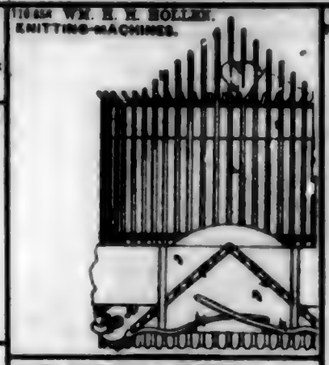
110,648. FRANKLIN T. GRIMES. LAMPS.



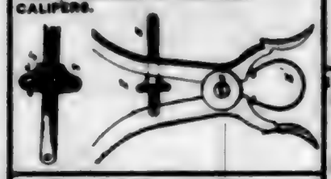
110,649. GEORGE ALFRED HARRIS. CLOTHES-PINS.

110,650. HENRY A. HARRIS. SAW-SETS.

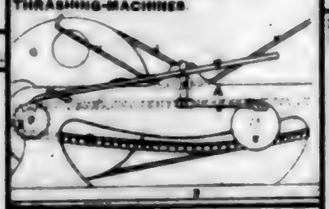
110,651. HENRY M. HARTSHORN. FOLDING LAMP-SHADES.



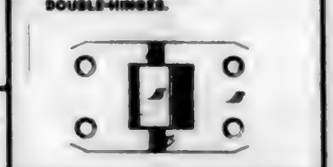
110,652. WILLIAM HAYMAN. COMPOSITIONS FOR PRESERVING WOOD.



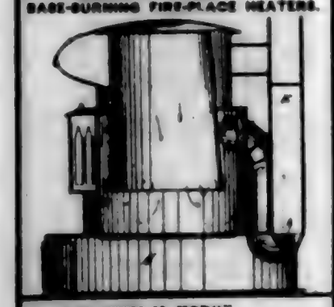
110,653. SAMUEL HAYWARD. RECLINING AND ROCKING-CHAIRS.



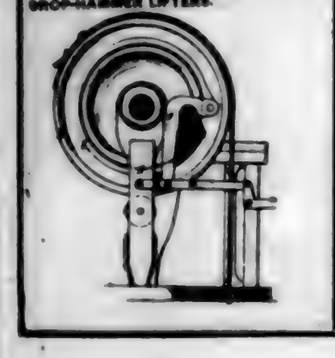
110,654. WM. H. H. HOLLEY. KNITTING-MACHINES.



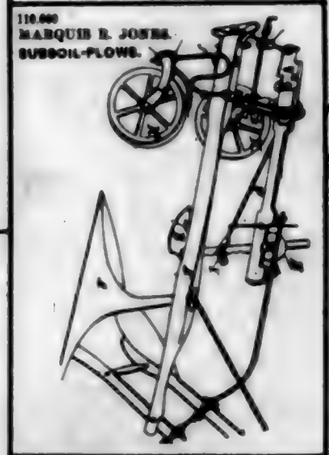
110,655. WILLIAM P. HOPKINS. CALIPERS.



110,656. HIRAM B. HURLBURT. THRASHING-MACHINES.

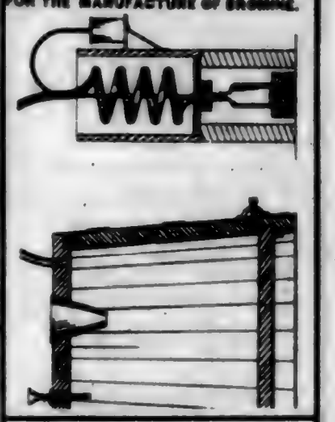


110,657. JOHN S. JENNESS. DOUBLE-HINGES.



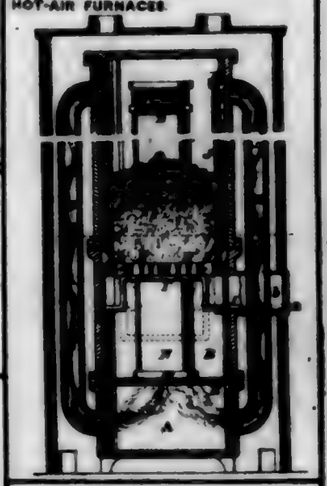
110,658. KLISHA S. NRATH. BASE-BURNING FIRE-PLACE HEATERS.

110,659. FRANCIS M. HODGE. DROP-HAMMER LIFTERS.



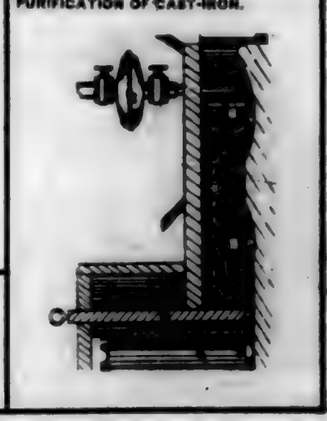
110,660. MARQUIS R. JONES. SUBSOIL-PLOWS.

110,661. RICHARD W. JONES, JOHN R. BAKER. MILKING-STOOLS.

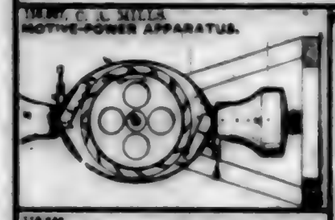


110,662. JOHN J. JUHEEL. APPARATUS FOR THE MANUFACTURE OF BROOMS.

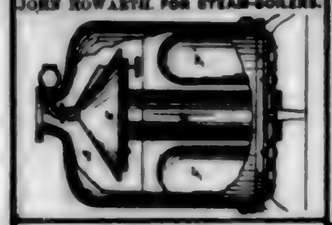
110,663. CALVIN MARSHALL. RUT-LEVELERS.



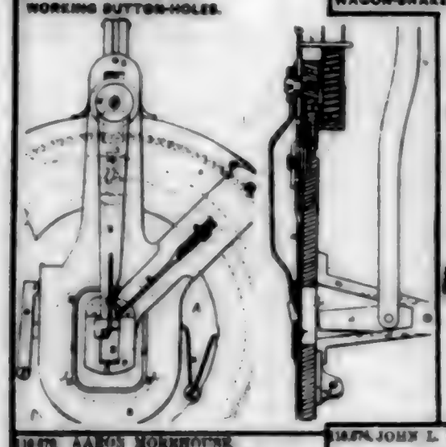
110,664. PETER MARTIN. HOT-AIR FURNACES.



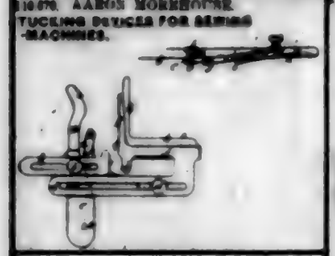
110,665. JEROME B. MELVIN. COMPOSITIONS FOR ROOFING.



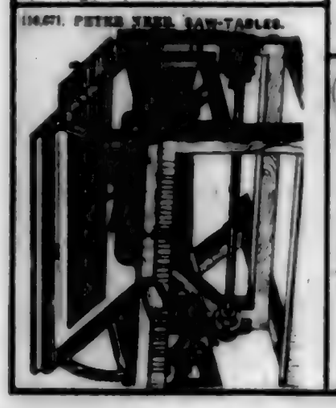
110,666. JOHN W. MIDDLETON. PURIFICATION OF CAST-IRON.



110,667. C. C. MILLS.
MOTIVE-POWER APPARATUS.

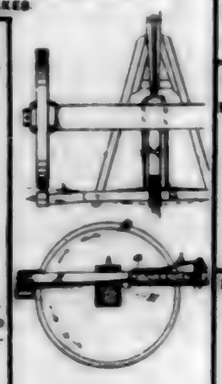


110,668. JOHN H. MILLS, JOHN HOWARTH, HOT-WATER FEEDERS FOR STEAM-BOILERS.

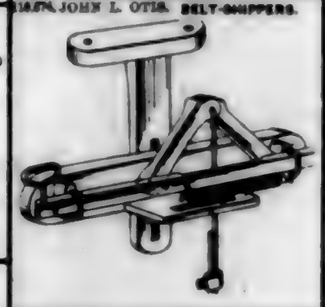


110,669. EUGENE MORRAU.
SEWING-MACHINES FOR WORKING BUTTON-HOLES.

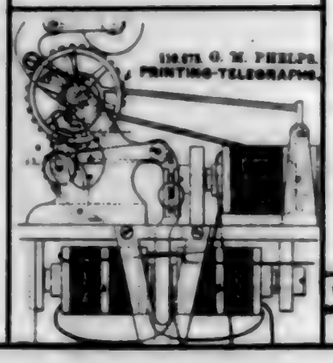
110,670. AARON MORRHOUSE.
TUCKING DEVICES FOR SEWING-MACHINES.



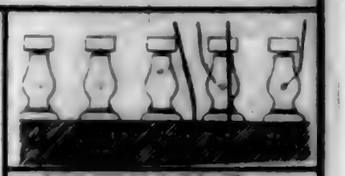
110,671. PETER VERE, SAW-TABLES.



110,672. FLOUR-SIFTERS.
LUCY SAWYER, Nurse.

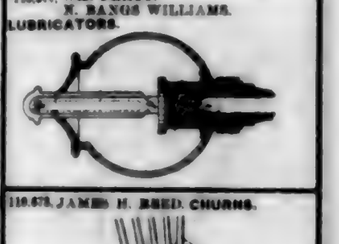


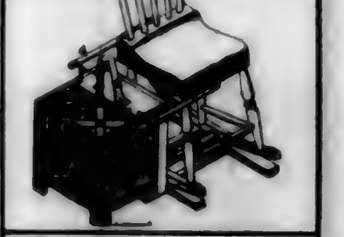
110,673. ANDREW V. D. H. OLIVER.
WAGON-BRAKES.



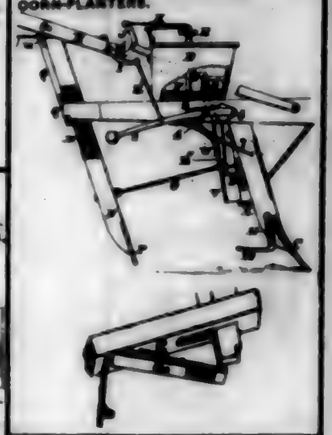
110,674. JOHN L. OTIS. BELT-SHIPPERS.

110,675. O. M. PHELPS.
PRINTING-TELEGRAPHS.



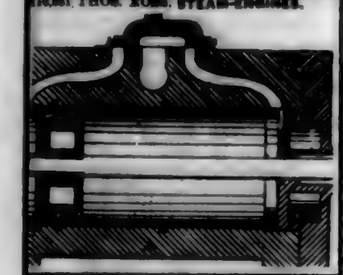


110,676. CHARLES L. PIERPONT.
SPARK-ARRESTERS.

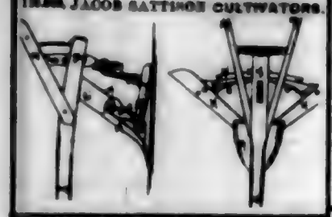


110,677. WM. PRATT,
N. BANGS WILLIAMS.
LUBRICATORS.

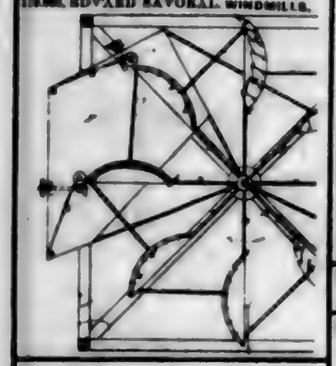
110,678. JAMES H. REED. CHURNS.



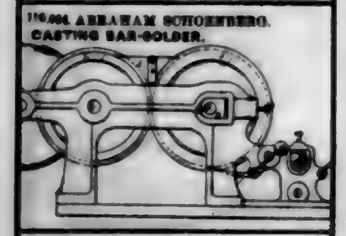
110,679. JOHN REICHELDERFER,
CORN-PLANTERS.



110,680. NATHANIEL B. RICE.
MANUFACTURE OF ACID PHOSPHATES FOR USE IN BAKING-POWDERS, &C.

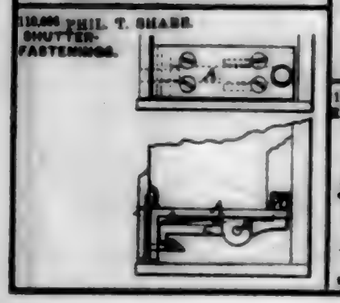


110,681. THOS. FORD. STEAM-ENGINES.

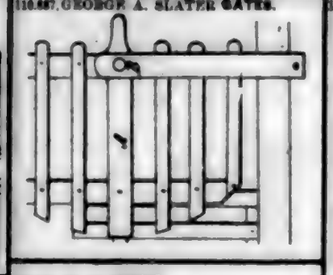


110,682. JACOB SATTISON CULTIVATORS.

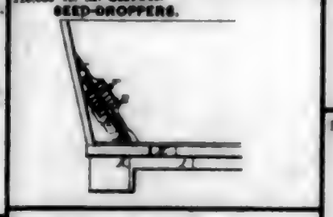
110,683. EDVARD SAVORAL. WINDMILLS.



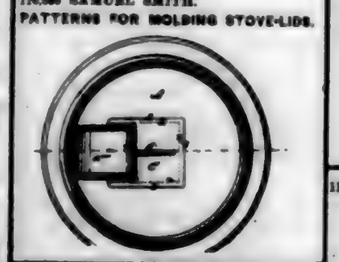
110,684. ABRAHAM SCHOENBERG.
CASTING BAR-SOLDER.



110,685. JOHN W. SCHWANER. DIES FOR FORMING HORSE-COLLAR SHELLS.

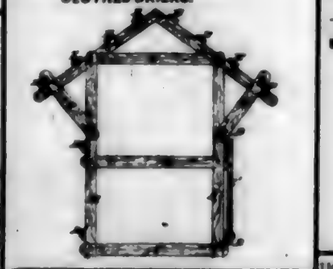


110,686. PHIL. T. SHARP.
SHUTTER-FASTENINGS.



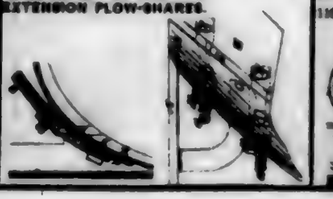
110,687. GEORGE A. SLATER GATES.

110,688. H. M. SMITH.
SEED-DROPPERS.

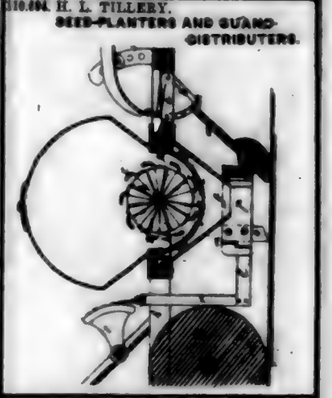


110,689. SAMUEL SMITH.
PATTERNS FOR MOLDING STOVE-LIDS.

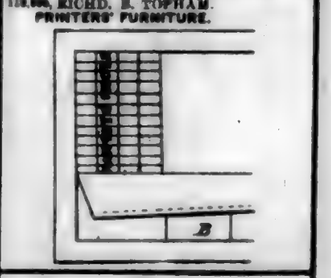
110,690. JACOB H. SNYDER.
LUBRICATING COMPOUNDS.



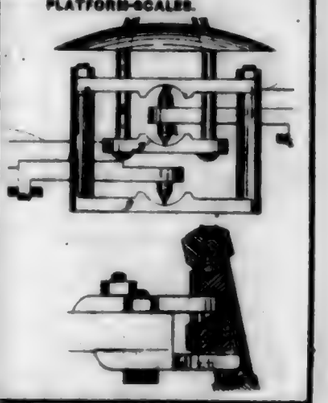
110,691. HENRY M. STEVENSON.
CLOTHES-DRIERS.



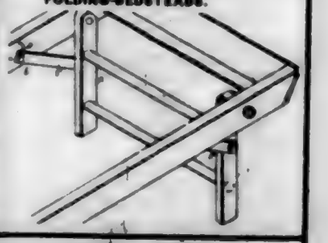
110,692. GEO. W. THOMPSON.
REVERSIBLE PLOWS.



110,693. GEORGE W. THORP.
EXTENSION PLOW-SHARES.

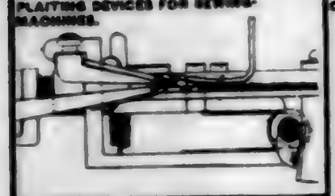


110,694. H. L. TILLERY.
SEED-PLANTERS AND GUANO-DISTRIBUTERS.



110,695. RICHD. B. TOPHAM.
PRINTERS' FURNITURE.

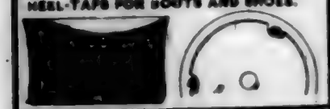
110,696. J. H. TRUEX.
PLATFORM-SCALES.



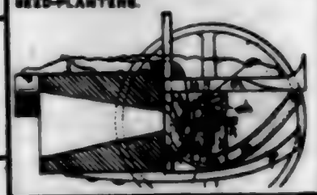
110,697. JOSHUA TURNER.
FOLDING-BEDSTEADS.

110,698. BECKWITH W. TUTHILL.
WHEELBARROW-FRAMES.

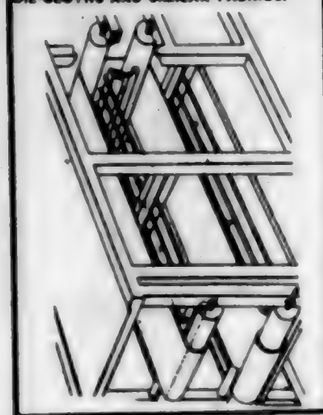
110,698 WM. WALKER.
PLAITING DEVICES FOR SEWING-MACHINES.



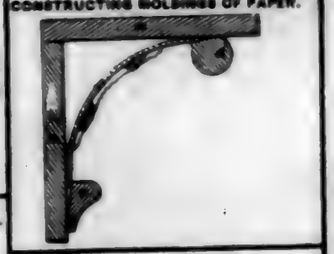
110,699 WM. C. WARING. ALARM-ATTACHMENTS FOR MACHINES FOR FORMING HAT-BODIES.



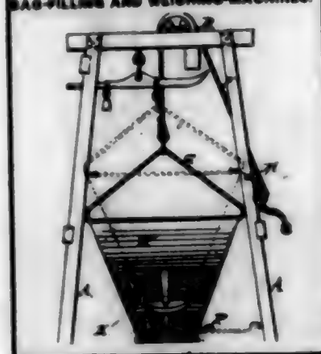
110,700 THOS. WELHAM. SAWS.



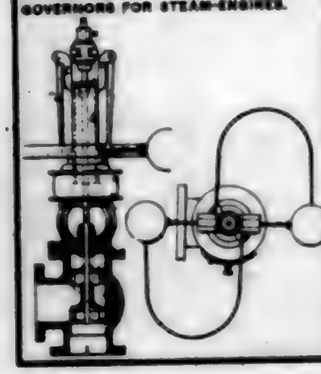
110,701. ALEXANDER WARNER.
HEEL-TAPS FOR BOOTS AND SHOES.



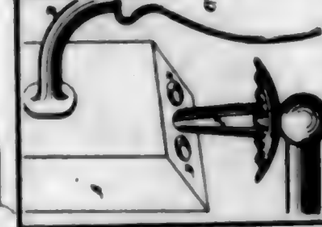
110,702 WILLIAM F. WEST.
SEED-PLANTERS.



110,703 OLIVER C. WASHBURN. DRYING OIL-CLOTHS AND SIMILAR FABRICS.

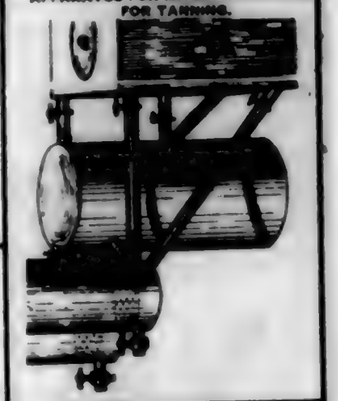


110,704. WILLIAM W. WEBSTER.
CONSTRUCTING HOLDINGS OF PAPER.

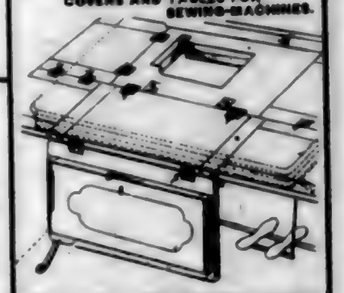


110,705. C. A. WHELAN.
CHARLES T. WAKELEY.
BAG-FILLING AND WEIGHING-MACHINES.

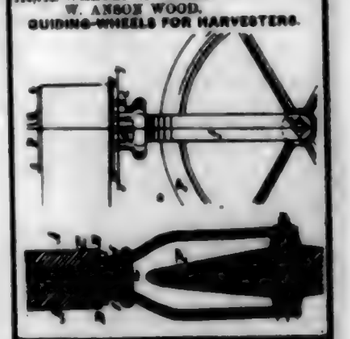
110,706 CHARLES WATERS.
GOVERNORS FOR STEAM-ENGINES.



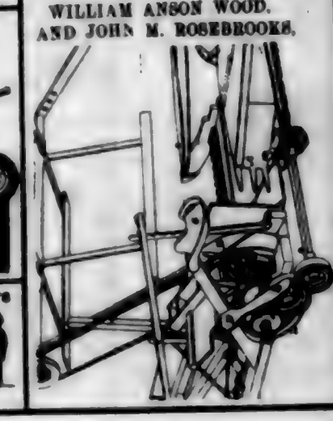
110,707 LEWIS WILKINSON.
SAD-IRON HEATERS.



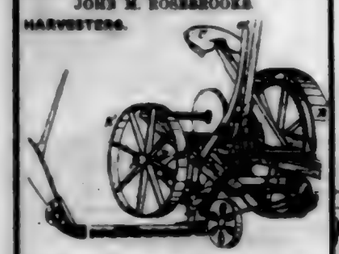
110,708 W. L. WILLIAMS. CHILDREN'S HOBBY-HORSES.



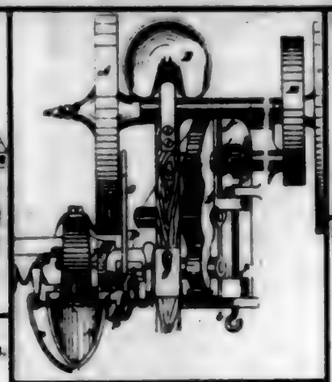
110,710 RILEY P. WILSON.
APPARATUS FOR MAKING EXTRACTS FOR TANNING.



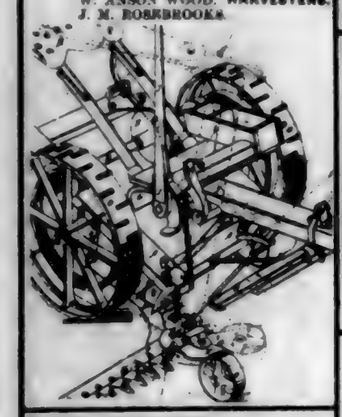
110,711. FRANCIS B. WOLFINGER.
COVERS AND TABLES FOR SEWING-MACHINES.



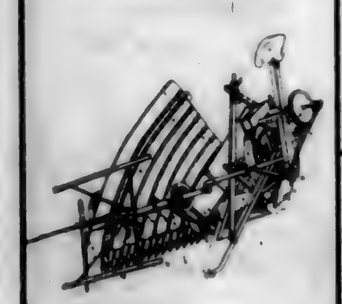
110,712. WALTER A. WOOD.
W. ANSON WOOD.
GUIDING-WHEELS FOR HARVESTERS.

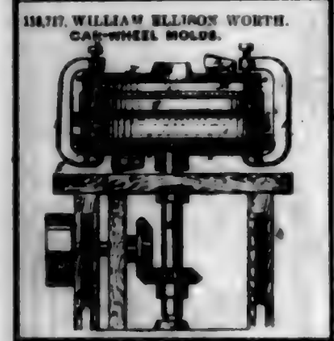


110,713. WALTER A. WOOD.
HARVESTERS.
WILLIAM ANSON WOOD.
AND JOHN M. ROSEBROOKS.



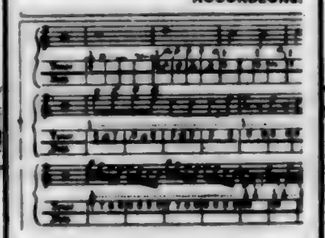
110,714. WALTER A. WOOD.
WM. ANSON WOOD.
JOHN M. ROSEBROOKS.
HARVESTERS.



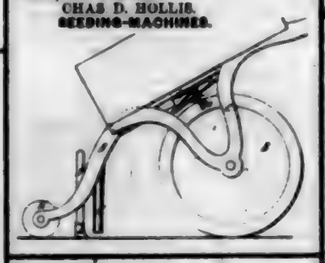


110,715 WALTER A. WOOD.
W. ANSON WOOD. HARVESTERS.
J. M. ROSEBROOKS.

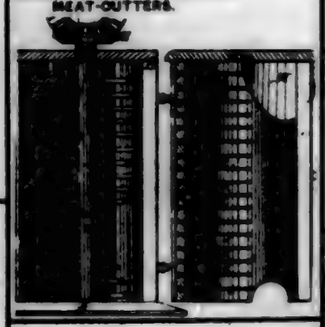
110,716. W. ANSON WOOD.
HARVESTER-RAKES.



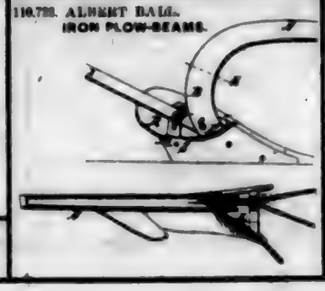
110,717. WILLIAM ELLISON WORTH.
CAR-WHEEL MOLDS.



110,718 CHARLES M. YOUNG.
HARVESTERS

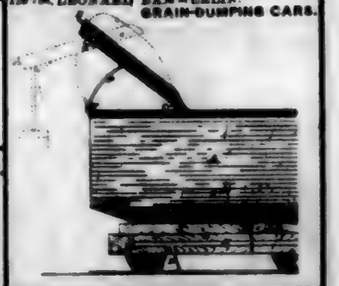


110,719 CARL FRIEDRICH ZIMMERMANN.
MUSICAL NOTATIONS FOR ACCORDEONS.



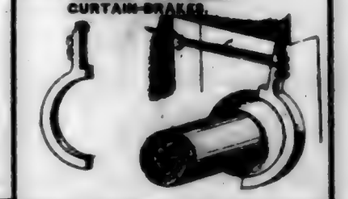
110,720. D. S. ALVORD.
CHAS D. HOLLIS.
SEEDING-MACHINES.

110,721 JEREMIAH S. ASTLEY.
MEAT-CUTTERS.



110,722. ALBERT BALL.
IRON PLOW-BEAMS.

110,723 DAVID H. BALL.
JOHN BROOKS.
CAR-REPLACERS.

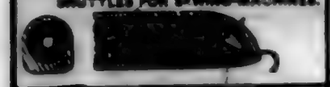


110,724. LEONARD BAMMERLIN.
GRAIN-DUMPING CARS.

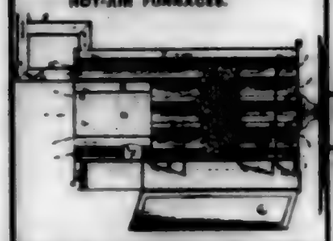
110,725. WILLIAM BARSTOW.
REIN-HOLDERS.

110,726. THOMAS S. BAYLIS.
GEORGE H. MAURER.
CURTAIN-SHAKER.

110,727. F. BECK.
COATING AND DECORATING PAPER, CLOTH, AND OTHER MATERIALS.

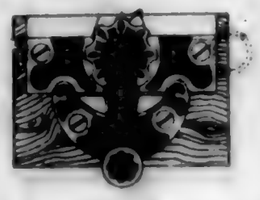


110,728. JNO. H. BLOODGOOD.
SASH-HOLDERS.

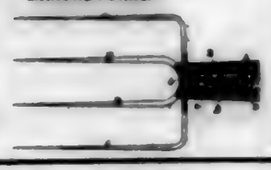


110,729. A. L. BOGART GAS APPARATUS.

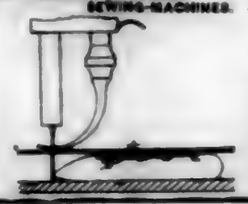
No.730. FREDERICK W. ROLAND.
SHUTTLES FOR SEWING-MACHINES.



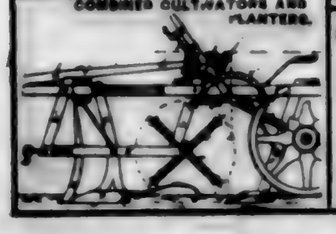
No.731. LANDRO BONNELL.
HOT-AIR FURNACES.



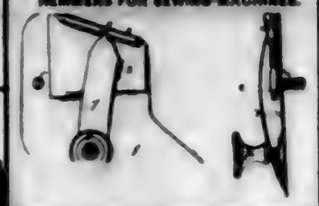
No.732. N. H. BONDFIELDT. CIGAR-MOLDS.



No.733. LLIAM K. BRECKENRIDGE.
FASTENERS FOR MEETING-RAILS OF SASHES.

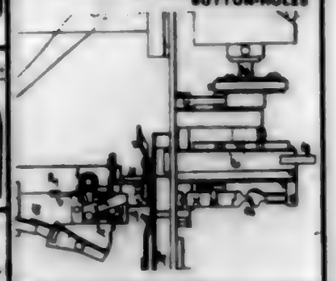


No.734. AMOS S. BRINSER.
HENRY BRICKER.
MANURE-FORKS.



No.735. WILLIAM H. BUKER.
SEWING-MACHINES.

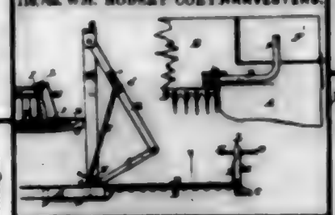
No.736. PETER BURRESS.
COMBINED CULTIVATORS AND PLANTERS.



No.737. CYRUS CARLETON.
HEMMERS FOR SEWING-MACHINES.

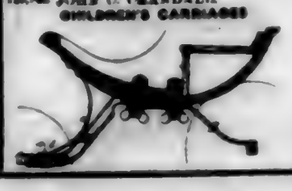
No.738. THO. W. CHANDLER.
PRESERVING WOODS.

No.739. SHERMAN CLEMINSHAW.
SEWING-MACHINES FOR WORKING BUTTON-HOLES

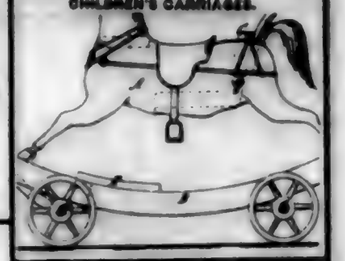


No.740. JACOB L. COLES.
BINDERS FOR SEWING-MACHINES.

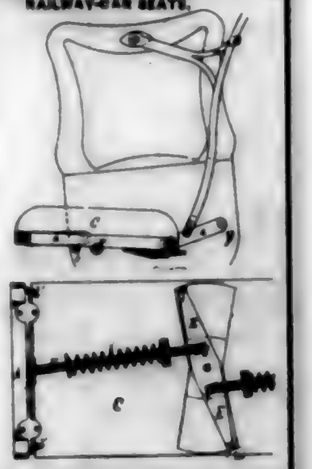
No.741. DAVID PITKIN COBY.
AUTOMATIC CAR-COUPLINGS.



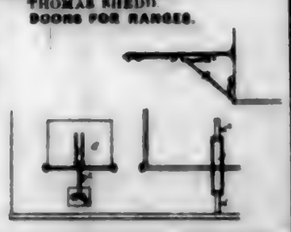
No.742. WM. ROBERT COBY. HARVESTERS.



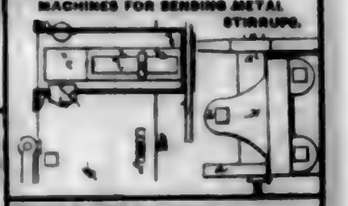
No.743. JOHN CRABTREE.
BOOT-JACKS.



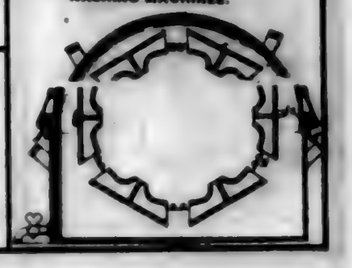
No.744. JOHN C. CRANDALL.
CHILDREN'S CARRIAGES



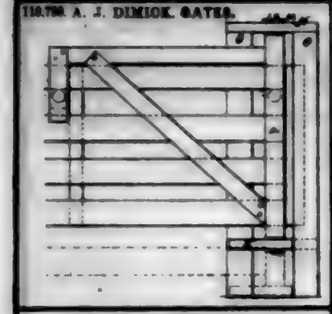
No.745. W. R. CRANDALL.
CHILDREN'S CARRIAGES.



No.746. WILLIAM CRANDELL.
RAILWAY-CAR SEATS.



No.747. ROYAL B. DEANE.
THOMAS SHEDD
DOORS FOR RANGES.

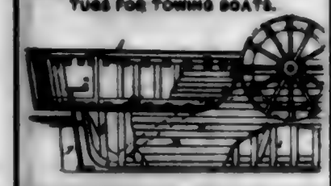


No.748. JOHN H. DE VALIN.
MACHINES FOR BENDING METAL STIRRUPS.

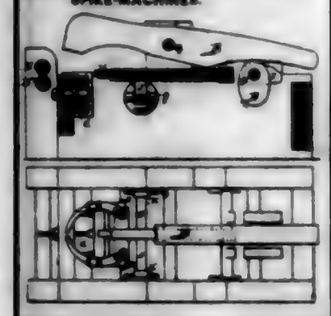
No.749. SAMUEL DE VRAU.
WASHING-MACHINES.

No.750. A. J. DIMICK. GATES.

No.751. THOMAS S. DIXSTON.
HANDLES FOR CROSS-CUT SAWS.



No.752. WM. DOWALD. QUADRATS.

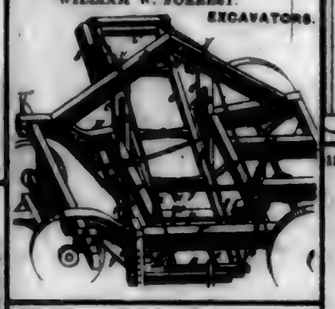


No.753. JOHN DOYLE.
FEED-WATER PIPES.

No.754. WALTER EVERSON.
TUGS FOR TOWING BOATS.

No.755. DAVID EVNON.
SPIKE-MACHINES.

No.756. DAVID EVNON.
SPIKE-MACHINES.

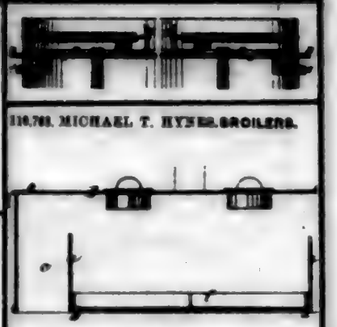


No.757. REUBEN G. FARNHAM
FRUIT-CANS.

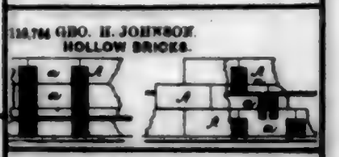
No.758. NELSON FAUGHT. PLOWS.

No.759. DAVID GILMORE.
WILLIAM W. FORREST.
EXCAVATORS.

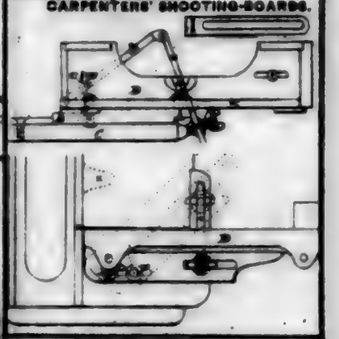
No.760. JOSEPH HARRISON.
PRECAUTIONARY ATTACHMENTS FOR BOTTLES CONTAINING POISON.



No.761. WM. HILLHOUSE.
GEO. W. REIGGS.
DEVICES FOR HOOKING SCREW-CAPS.

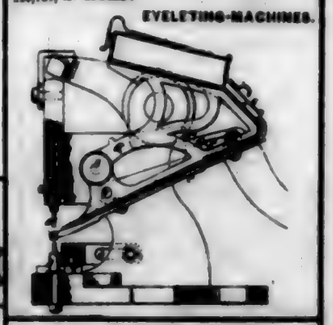


No.762. ARCHELAUS M. HOWE.
DEVICES FOR CUTTING SOLES FOR BOOTS AND SHOES.



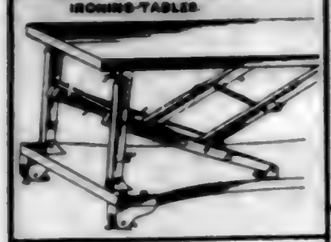
No.763. MICHAEL T. HYNES. BROILERS.

No.764. GEO. H. JOHNSON.
HOLLOW BRICKS.

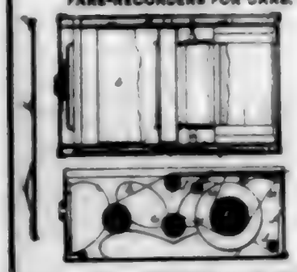


No.765. JOSEPH JONES.
CARPENTERS' SHOOTING-BOARDS.

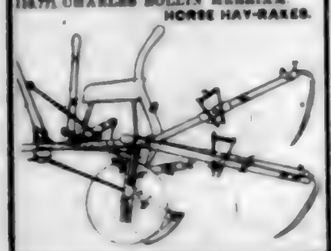
No.766. HENRY KILLAM.
CARRIAGE-AXLES.



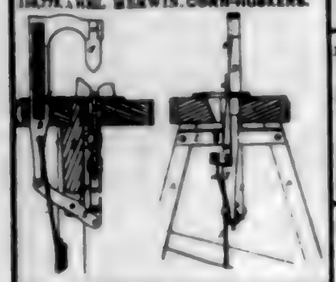
No.767. A. KOMP.
EYELETING-MACHINES.



No.768. AUSTIN S. MANN.
METALLIC HEELS.



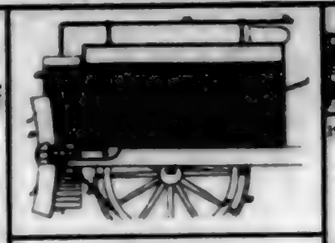
110,769. DANIEL W. MARSHALL.
IRONING-TABLES.



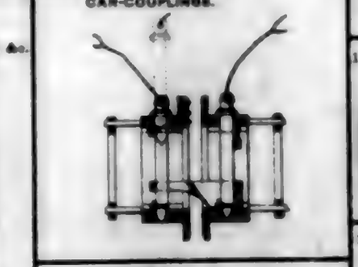
110,770. GEORGE B. METTEE.
OSCAR S. PEASE.
FARE-RECORDERS FOR CARS, &c.

110,771. CHARLES BOLLIN MERRIAM.
HORSE HAY-RAKES.

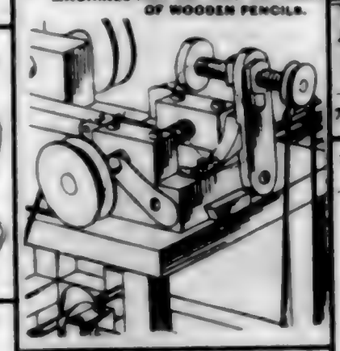
110,772. ABEL MERWIN. CORN-HUSKERS.



110,773. ROBERT B. MILLER.
METHOD OF FORMING BODY-LOOPS FOR CARRIAGES.

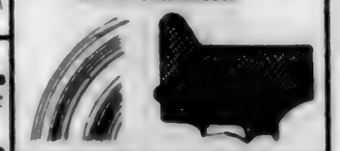


110,774. TOM. W. MITCHELL.
COMPOUNDS FOR DESTROYING WORMS IN THE COTTON-PLANT.



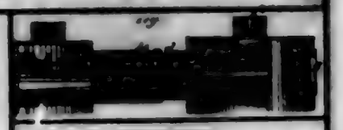
110,775. WM. C. MOORE.
STREET-SPRINKLERS.

110,774. JOSEPH MOUNT.
CAR-COUPLINGS.

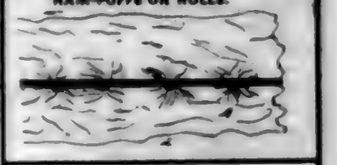


110,777. THEIS H. MÜLLER.
MACHINES FOR CUTTING THE ENDS OF WOODEN PENCILS.

110,778. DAVID MUNSON.
LIGHTNING-RODS.

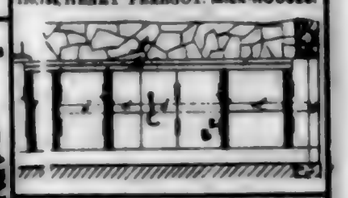


110,779. CHANDLER NEEDHAM.
CASTING CAR-WHEELS

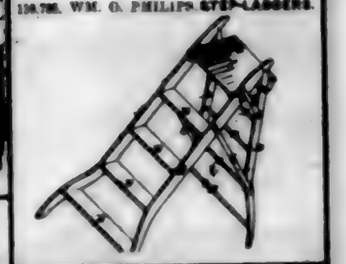


110,780. W. HARRISON NEWTON.
CAR-STARTERS.

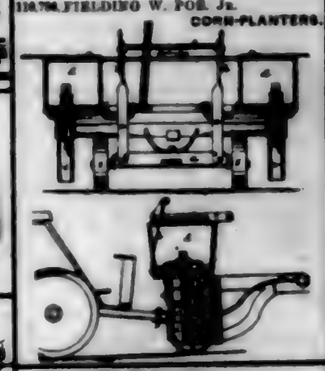
110,781. W. H. NOBLE.
HEATING-STOVES AND DRUMS.



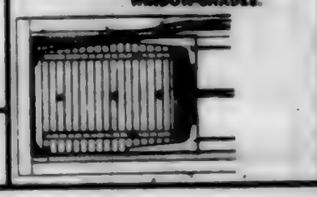
110,782. J. D. OPPENHEIMER.
HAIR-PUFFS OR ROLLS.



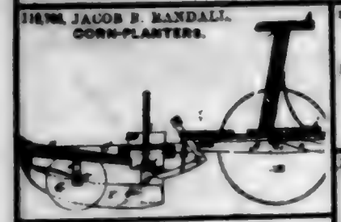
110,783. EDWARD LAWLEY PARKER.
FASTENINGS FOR BRACES, &c.



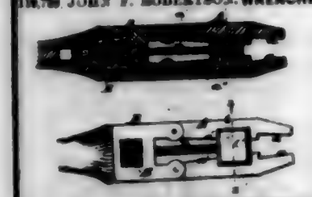
110,784. HENRY PERROUT. MILK-HOUSES.



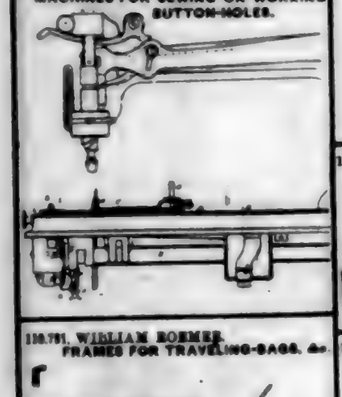
110,785. WM. G. PHILLIPS. STEP-LADDERS.



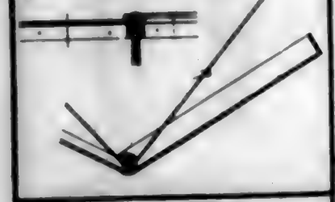
110,786. FIELDING W. POE, Jr.
CORN-PLANTERS.



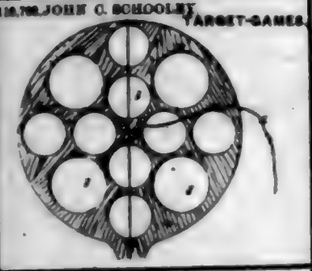
110,787. ANGEL W. FOSTER.
WINDOW-SHADES.



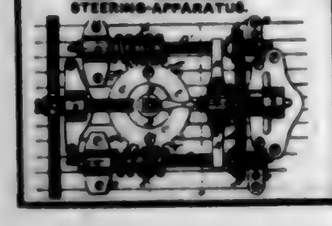
110,788. JACOB P. RANDALL.
CORN-PLANTERS.



110,789. JOHN F. ROBERTSON. WRENCHES.

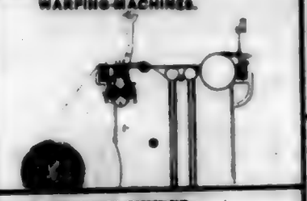


110,790. CHAS. E. ROBINSON.
MACHINES FOR SEWING OR WORKING BUTTON-HOLES.

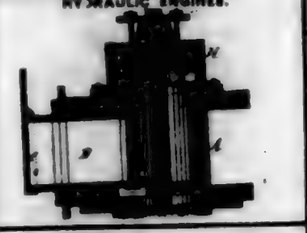


110,791. WILLIAM ROEMER.
FRAMES FOR TRAVELING-BAGS, &c.

110,792. JOHN C. SCHOOLEY.
TARGET-GAMES.



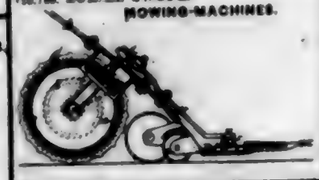
110,793. JOHN C. SCHRADER.
CARL A. MATHIESEN.
STEERING-APPARATUS.



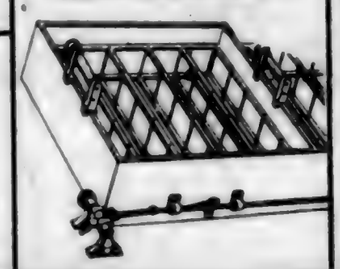
110,794. WM. E. SHAW.
STREET-PAVEMENTS.

110,795. THOMAS SINGLETON.
WARPING-MACHINES.

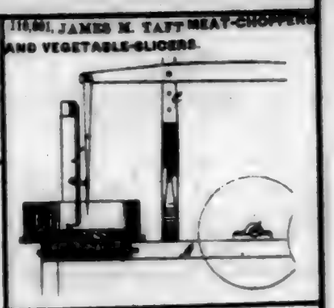
110,796. WILLIAM SNYDER.
HYDRAULIC ENGINES.



110,797. W. H. STAATS.
RAILWAY RAIL-CHAIRS.



110,798. ROBERT S. STUBBS. ENVELOPES.

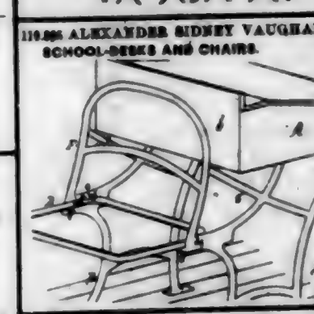


110,799. ZUBIEL SWOPE.
MOWING-MACHINES.

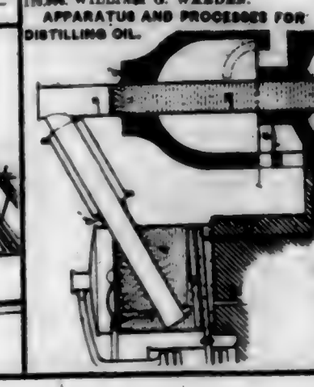
110,800. GEO. W. SYLVESTER.
APPARATUS AND PROCESSES OF CLEANING COTTON-WASTE, &c.

110,801. JAMES M. TAFT. MEAT-CHOPPERS AND VEGETABLE-SLICERS.

110,802. E. W. TALBOTT.
CLOTHES-LINE HOLDERS.

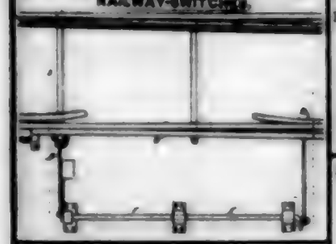


110,803. CLARK P. TILLINGHAST.
RAILROAD-CAR VENTILATORS.

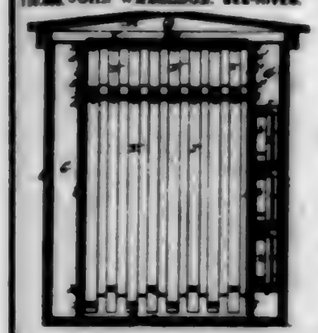


110,804. ANTONY TUMLER.
SODA-WATER FOUNTAINS.

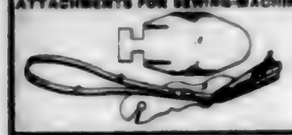
110,805. ALEXANDER SIDNEY VAUGHAN.
SCHOOL-DESKS AND CHAIRS.



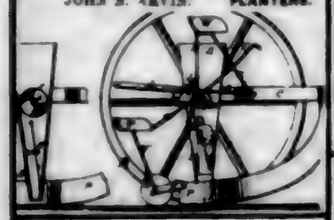
110,806. WILLIAM G. WARDEN.
APPARATUS AND PROCESSES FOR DISTILLING OIL.



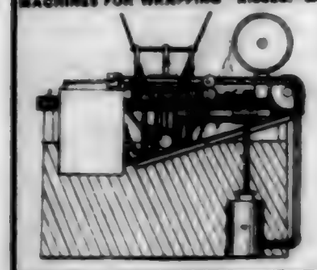
110,807. DWIGHT F. WELSH. COTTON-PLANTERS.



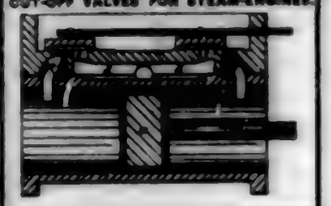
110,808. WM. WHARTON, Jr. RAILWAY-SWITCHES.



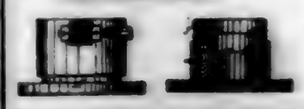
110,809. JOHN WHEELDON. BEE-HIVES.



110,810. WM. H. WHITE. ATTACHMENTS FOR SEWING-MACHINES.

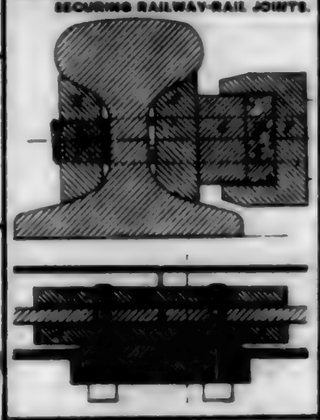


110,811. JOSEPH M. WHITMORE. JOHN F. ARVIN. CORN-PLANTERS.



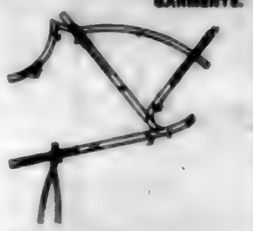
110,812. CHARLES C. WITAOK. MACHINES FOR WRAPPING "KISSES," &c.

110,813. GEO. S. YOUNG. CUT-OFF VALVES FOR STEAM-ENGINES.

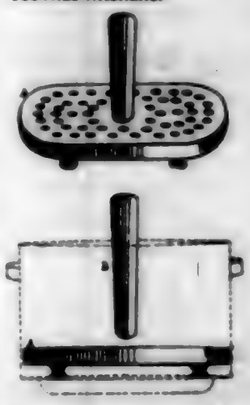


110,814. GEO. S. YOUNG. MILL-SPINDLE STEPS.

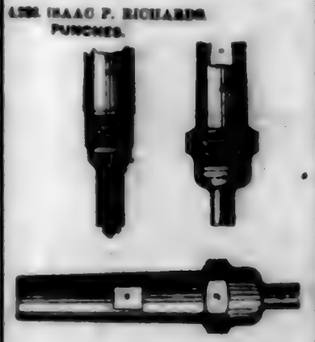
4,203. W. B. CRANDALL. CHILDREN'S CARRIAGES.



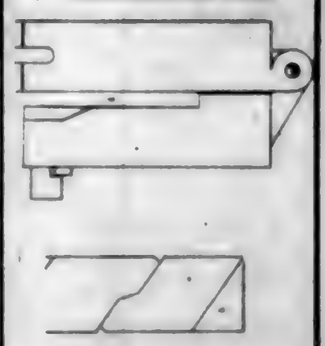
4,204. LYMAN FAY. SECURING RAILWAY-RAIL JOINTS.



4,205. C. L. LEETE. INSTRUMENTS FOR DRAUGHTING GARMENTS.



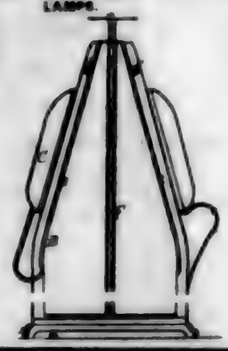
4,206. C. L. LEETE. INSTRUMENTS FOR DRAUGHTING GARMENTS.



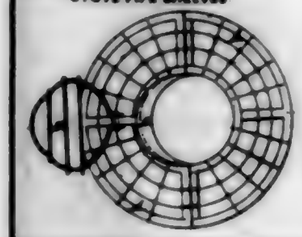
4,207. ARIADNA B. MERCIER. CLOTHES-WASHERS.

4,208. ISAAC P. RICHARDS. PUNCHES.

4,209. WILLIAM MEDD WATSON. BLANKS FOR, AND DIES FOR MAKING, MOLD-BOARDS FOR PLOWS.

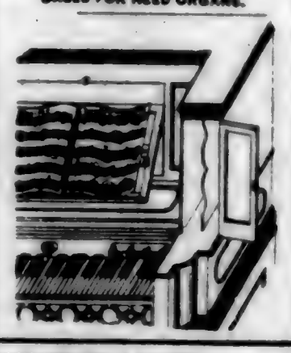


ILLUSTRATIONS OF PATENTS
ISSUED FROM
THE UNITED STATES PATENT OFFICE
JAN. 10, 1871.

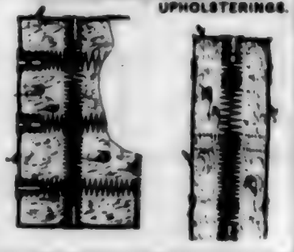


110,815. JOHN ADAMS. GLASS LAMPS.

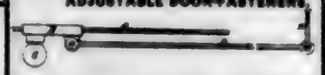
110,816. A. ALBERTSON. LAMPS.



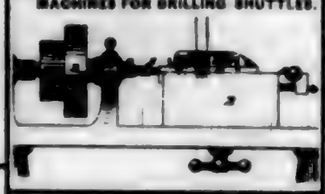
110,817. SAML. J. ANDERSON. STOVE-PIPE SHIELDS.



110,818. ORREN A. ANTHONY. LIFTING-JACKS.



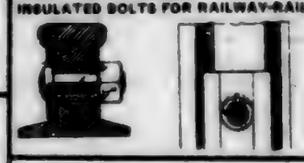
110,819. CHAS. E. BACON. CASES FOR REED ORGANS.



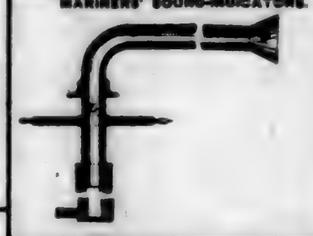
110,820. HORACE H. BARNES. BEDS, CUSHIONS, AND OTHER UPHOLSTERINGS.

110,821. LUCIUS PHILETUS BARNES. ADJUSTABLE DOOR-FASTENERS.

110,822. CHARLES E. BILLINGS. MACHINES FOR DRILLING SHUTTLES.



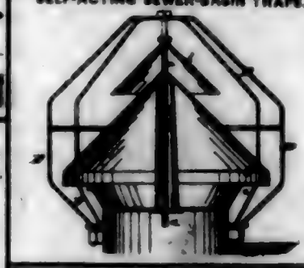
110,823. GEORGE O. BURDEN. ADJUSTABLE LOCK-COUPLINGS FOR VEHICLES.



110,824. ROBERT E. CHERRINGTON. COMPOUNDS FOR STOVE-POLISH.

110,825. SARAH J. CLARK. WASHING-MACHINES.

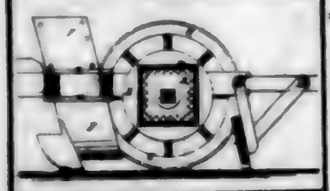
110,826. J. W. COCHRAN. INSULATED BOLTS FOR RAILWAY-RAILS.



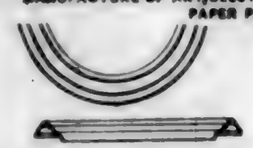
110,827. JAMES COCHRANE. MARINERS' SOUND-INDICATORS.

110,828. DANIEL L. CORBIN. RUBBER PADS FOR HORSE-SHOES.

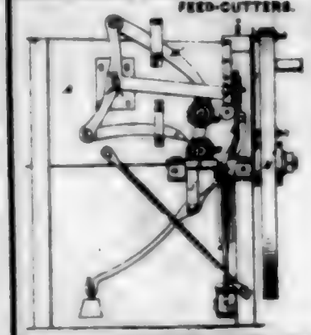
110,829. MATTHEW K. COUZENS. SELF-ACTING SEWER-BASIN TRAPS.



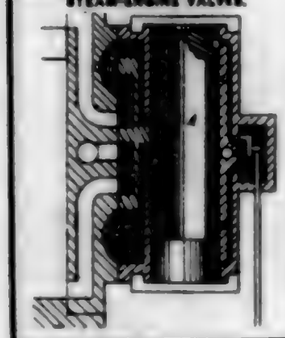
110,830. EPHRAIM D. CRAMER. SPRING-BOTTOMS FOR WAGON-BODIES.



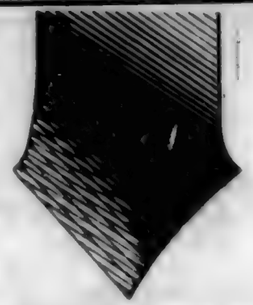
110,839. A. O. CRANE. WASHING-MACHINES.



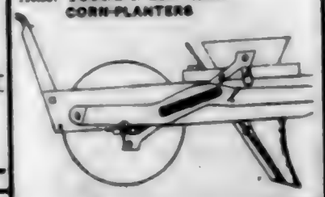
110,840. WILLIAM W. CROOM. COTTON-SEED PLANTERS AND GUANO-DISTRIBUTERS.



110,841. FRANCIS CURTIS. MANUFACTURE OF ARTICLES FROM PAPER PULP.



110,842. WILLIAM DABLEM. FEED-CUTTERS.

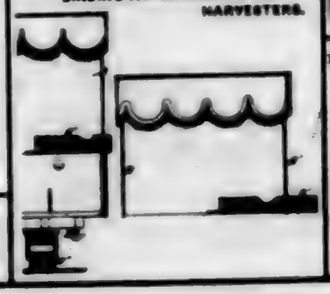


110,843. CHARLES P. DEANE. STEAM-ENGINE VALVES.

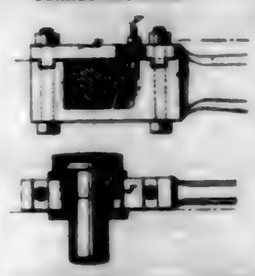
110,844. WILLIAM A. DRYDEN. CULTIVATORS.

110,845. YOUNG I. EDWARDS. CORN-PLANTERS

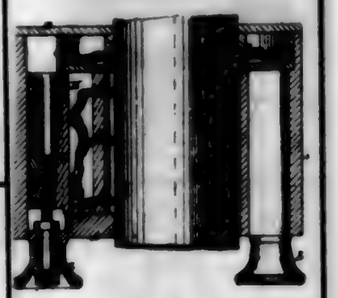
110,846. WILLIAM ENNIS. VENTILATORS.



110,847. D. P. FETTER. DRIVE-SCREWS.

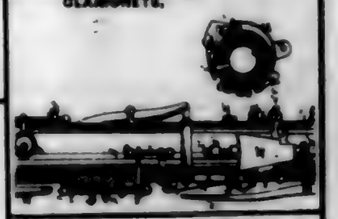


110,848. J. W. FISHER. SHOES.

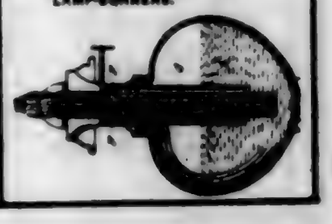


110,849. ABRAHAM X FREED. JONATHAN SNOOK. BINDING ATTACHMENTS FOR HARVESTERS.

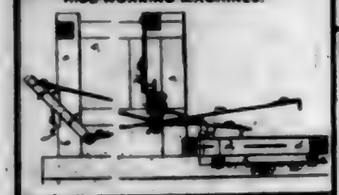
110,850. WILKERSON G. FREEMAN. CONNECTING-RODS.



110,851. HAMLIN F. FRISBIE. MILL-BUSHES.

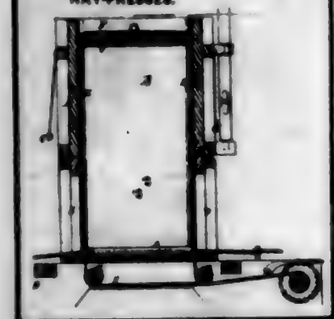


110,852. HUGO O. FRITSCH. FIRE-SCREENS AND STANDS.

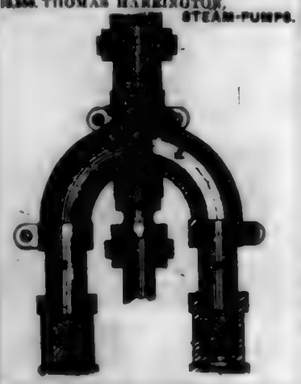


110,853. ANTON FRITSCHE. CLARIONETS.

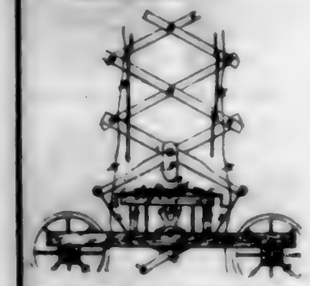
110,854. GEORGE P. FULLER. LAMP-BURNERS.



110,847. MARCUS B. GOULD. HIDE-WORKING MACHINES.

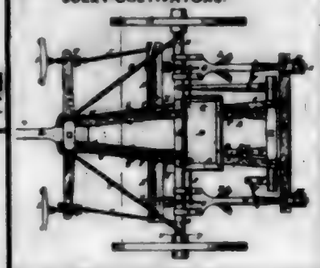


110,848. HUGH B. GRUMLING. HAMES-FASTENINGS.

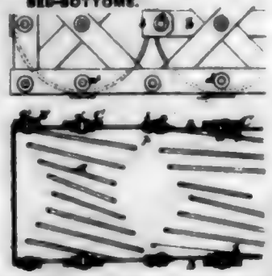


110,849. FINLAY F. HAMILTON. HAY-PRESSES.

110,850. THOMAS HARRINGTON. STEAM-PUMPS.

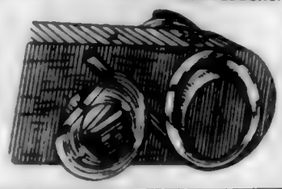


110,851. EDWARD J. HUDSON. FIRE-ESCAPES.

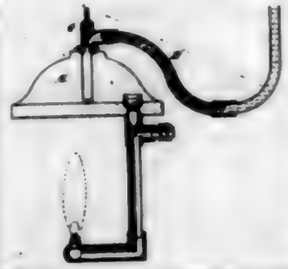


110,852. CARLETON B. HUTCHINS. ARTIFICIAL STONE FOR PAVEMENTS, WALKS, FLOORS, &c.

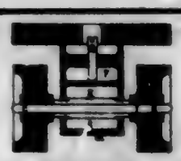
110,853. HUGH P. JORDAN. SULKY-CULTIVATORS.



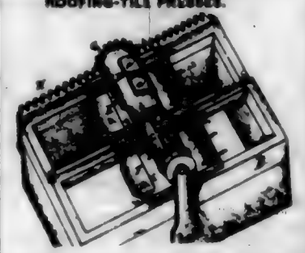
110,854. WILLIAM B. JUDSON. SEED-BOTTOMS.



110,855. JACOB KARR. NEEDLE-SETTERS AND THREADERS FOR SEWING-MACHINES.



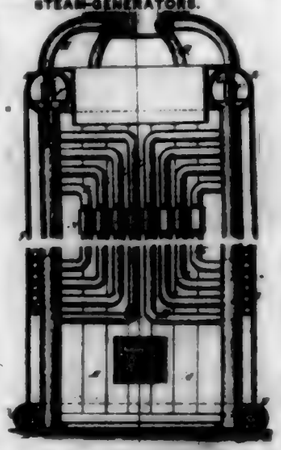
110,856. DE LANCY KENNEDY. DEVICES FOR SECURING THE TINES OF HAY-TEDDERS.



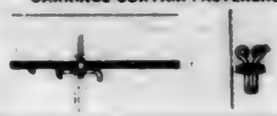
110,857. JOSHUA KIDD. APPARATUS FOR GENERATING AND BURNING VAPOR FROM HYDRO-CARBONS.

110,858. MATTHEW H. KIMBALL. ROLLER-SKATES.

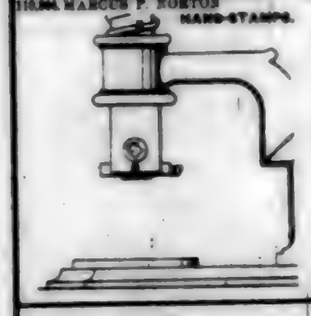
110,859. JOHN KOEHLER. ROOFING-TILE PRESSES.



110,860. JOHN LANE. PLOWSHARES.



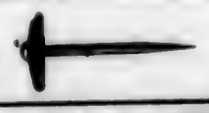
110,861. PHILIP LE GOULLON. GRAVEL AND SAND-HEATERS.



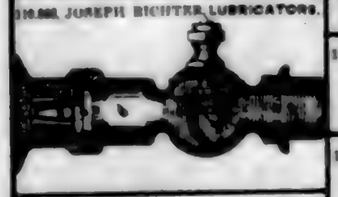
110,862. MIRABEAU N. LYNN. STEAM-GENERATORS.

110,863. WM. H. MORSE. CARRIAGE-CURTAIN FASTENERS.

110,864. MARCUS P. MORTON
HAND-STAMPS.

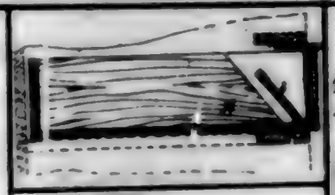


110,865. T. T. PROSSER.
TRACTION-ENGINES.

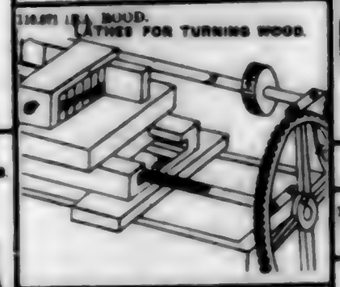


110,866. FRANCIS M. RANDELL.
APPARATUS FOR SUPPLYING NAPHTHA TO VAPOR-BURNING STREET-LAMPS.

110,867. T. C. RICHARDS. PICTURE-NAILS.

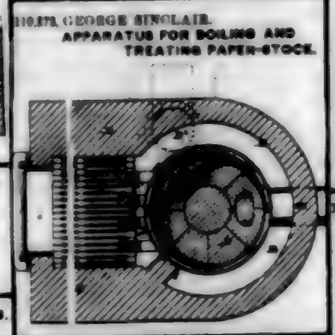


110,868. JOSEPH RICHTER. LUBRICATORS.



110,869. ELIAS C. RISHEL.
DENTAL LATHES.

110,870. ROBERT J. ROBERTS.
DRAWERS FOR STORES.



110,871. B. A. ROOD.
LATHES FOR TURNING WOOD.

110,872. JOHN D. SANSOM.
MAN-HOLE PLATES FOR STEAM-BOILERS.

110,873. GEORGE SINCLAIR.
APPARATUS FOR BOILING AND TREATING PAPER-STOCK.

110,874. ANDREW N. SMITH. PISTONS.

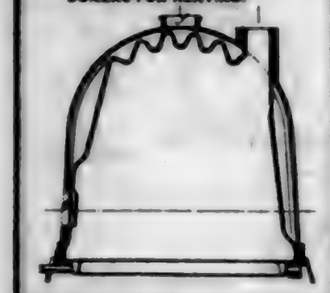
110,875. JOHN W. SMITH.
CEREMONIAL BELLS.

110,876. J. C. STODDARD.
HORSE HAY-RAKES.

110,877 CANCELED.

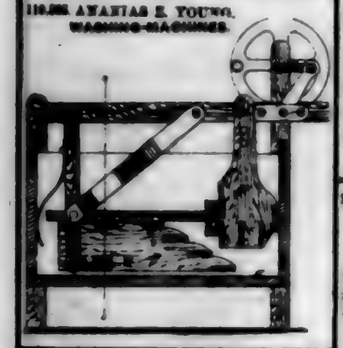
110,878. WM. H. TOWER.
METHODS OF COATING SAD-IRONS, &c.

110,879 EDWARD S. TOWLE.
THIMBLES.



110,880. GEORGE H. WEEKS.
CAR-COUPLINGS.

110,881 ROLLIN WHITE.
METALLIC CARTRIDGES.

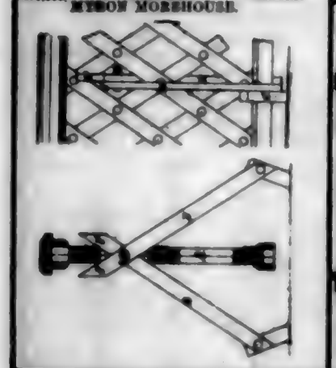


110,882. HENRY WHITESTONE.
CURBING FOR EXCAVATIONS.

110,883. OLIVER C. WILBUR, Jr.
FASTENINGS FOR THE TIPS OF BILLIARD-CUES.

110,884. JOHN G. WILSON.
BOILERS FOR HEATING.

110,885. AMANIAS E. YOUNG.
WASHING-MACHINES.



110,886. ALBERT Q. ADAMS.
SNOW-SHOVELS.

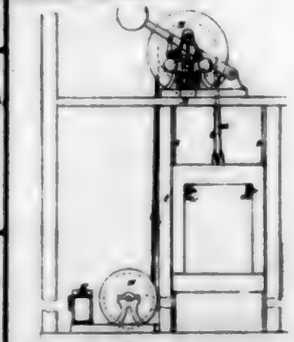
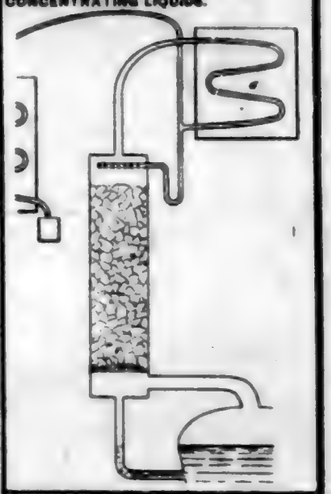
110,992. PATRICK MALONE. EARTH-CLOSETS.

110,993. JOHN W. MIDDLETON. PRODUCING REFINED CAST-IRON, STEEL AND MALLEABLE IRON.



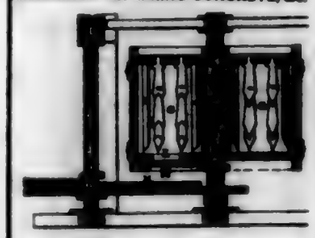
110,994. DAVID MILLER. LUNCH-BOXES.



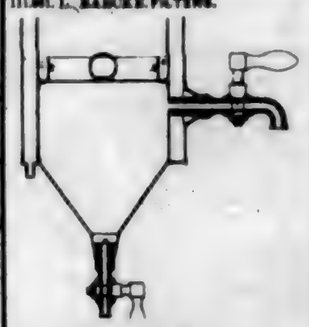
110,995. CHAS. MORRILL. ATTACHING KNOBS TO THEIR SPINDLES.

110,996. CHAS. R. OTIS. NORTON P. OTIS. HOISTING APPARATUS.

110,997. C. CHAUNCY PARSONS. APPARATUS FOR DISTILLING AND CONCENTRATING LIQUIDS.



110,998. GEORGE GILMAN PERCIVAL. APPARATUS FOR EXTRACTING ESSENTIAL OILS.

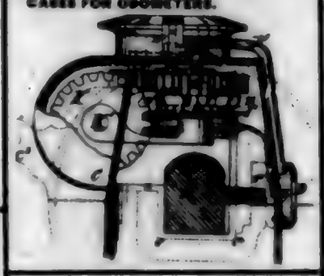


110,999. THOMAS POTTER. OIL-PAINTS FOR COATING OIL-CLOTH.

111,000. SILAS PUTNAM, THOS. BURT. MACHINES FOR MIXING CONCRETE, &c.

111,001. L. RABCKE. FILTERS.

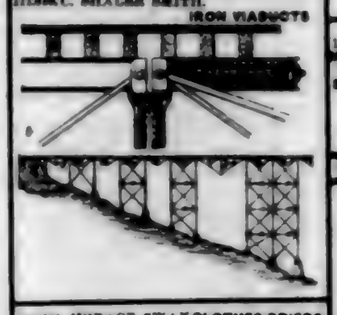
111,002. ALFRED PARAF. MATERIAL CALLED "OLE-IZERINE," FOR DYEING AND PRINTING.



111,003. ALFRED PARAF. PROCESSES OF EXTRACTING THE COLORING-MATTER OF MADDER.

111,004. CAROLINE PARKS. TREE-PROTECTORS.

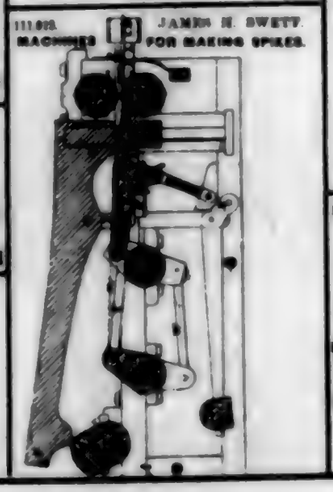
111,005. HORATIO A. REMINGTON. LET-OFF MECHANISMS FOR LOOMS.



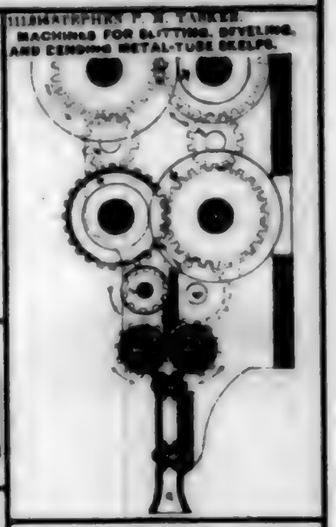
111,032. JACOB D. SEIPEL, CYRUS B. ALSOVER. CASES FOR ODOMETERS.

111,033. WALTER L. SHAW. FRUIT-PICKERS.

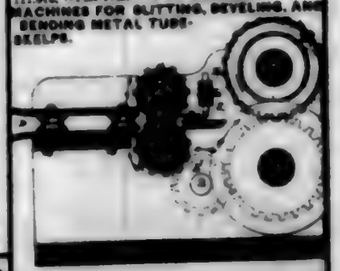
111,034. C. SHALER SMITH. IRON VIADUCTS.



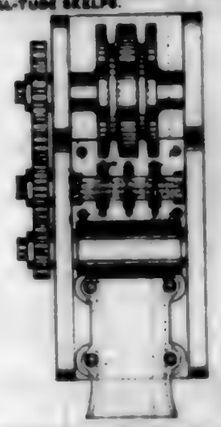
111,035. HORACE SWAN. CLOTHES-DRIERS.



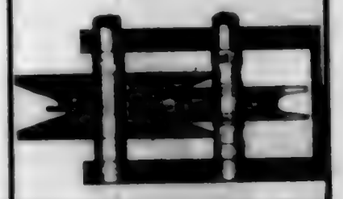
111,036. CHARLES L. SWEATT, GEORGE A. HUNTOON. CUSTARD AND CAKE-CASERS.



111,037. JAMES H. SWETT. MACHINES FOR MAKING SPIKES.

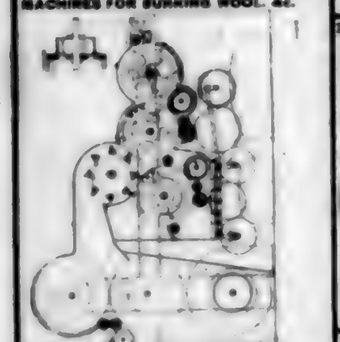


111,038. STEPHEN P. W. TASKER. MACHINES FOR SLITTING, BEVELING, AND BENDING METAL-TUBE SKELPS.

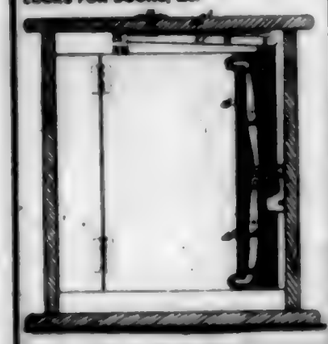


111,039. STEPHEN P. W. TASKER. MACHINES FOR SLITTING, BEVELING, AND BENDING METAL TUBE-SKELPS.

111,040. STEPHEN P. W. TASKER. MACHINES FOR SLITTING AND BENDING METAL-TUBE SKELPS.



111,041. STEPHEN P. W. TASKER. MACHINE FOR BENDING METAL TUBE-SKELPS.

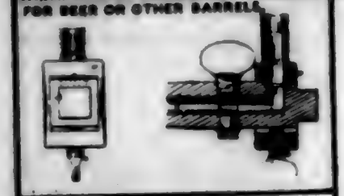


111,042. WILLIAM REYNOLDS. BURGLAR-ALARMS.

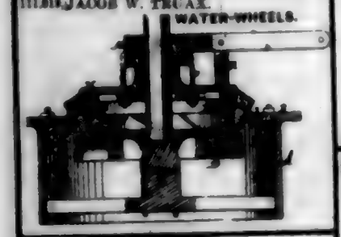
111,043. WILLIAM RICHARDSON. MACHINES FOR BURRING WOOL, &c.

111,044. BENJAMIN F. ROBERTS. LOCKS FOR DOORS, &c.

111,045. WILLIAM W. ROBINSON. JOINTS FOR RAILWAY RAILS.

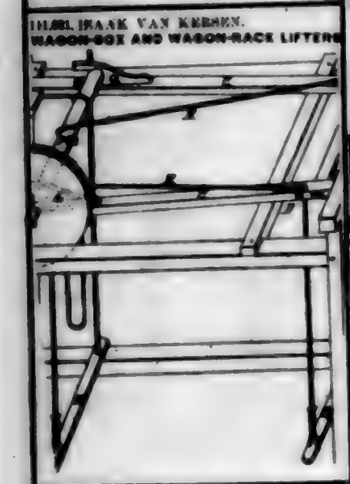


111,046. NEWTON C. SAMPLE. OPEN LINKS FOR COUPLING DOUBLE AND WHIFFLETREES.



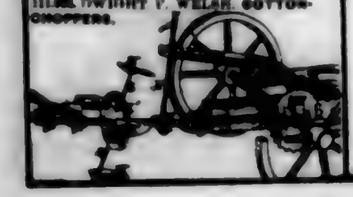
111,047. STEPHEN P. W. TASKER. MACHINE FOR BENDING METAL TUBE-SKELPS.

111,048. SAMUEL THOMPSON. FAUCETS FOR BEER OR OTHER BARRELS.



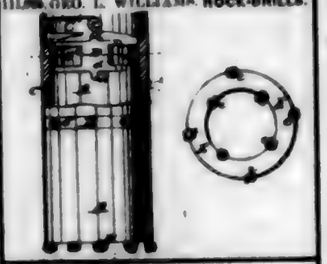
111,049. JACOB W. TRUAX. WATER-WHEELS.

111,050. H. B. VAN DENTHUYSEN. WINDOWS FOR STOVES.

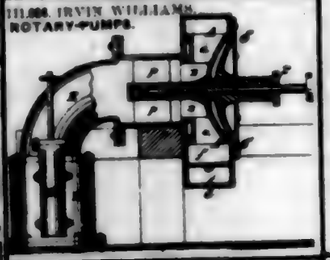


111,051. ISAAK VAN KERSEN. WAGON-BOX AND WAGON-RACK LIFTERS.

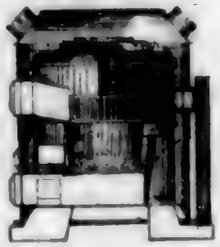
111,052. JEREMIAH M. WATSON. CRANK-PIECES FOR BOOTS AND SHOES.



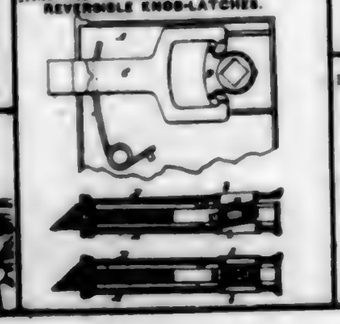
111,053. DWIGHT F. WELAR. COTTON-CHOPPERS.



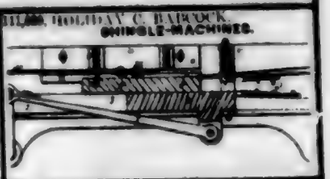
111,054. JEROME WHITE. PRUNING HATCHETS.



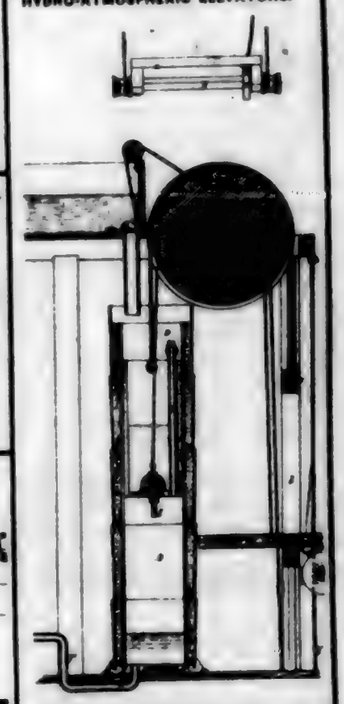
111,055. GEO. L. WILLIAMS. ROCK-DRILLS.



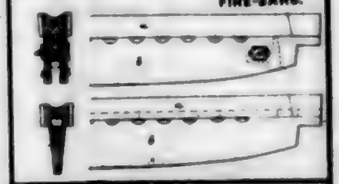
111,056. IRVIN WILLIAMS. ROTARY-PUMPS.



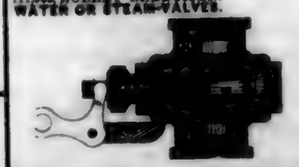
111,057. CHARLES ALLEN. HOT-AIR FURNACES.



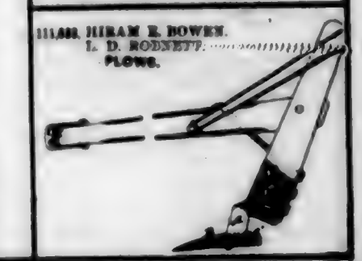
111,058. WM. H. ANDREWS. REVERSIBLE KNOB-LATCHES.



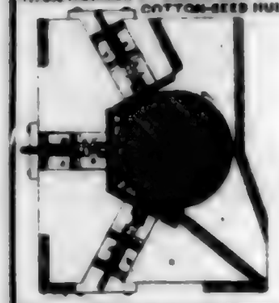
111,059. HOLIDAY C. BABCOCK. SHINGLE-MACHINES.



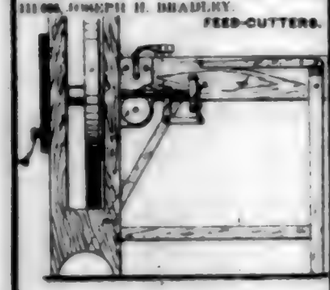
111,060. CYRUS W. BALDWIN. HYDRO-ATMOSPHERIC ELEVATORS.



111,061. WILLIAM BATCHELOR. FIRE-BARS.

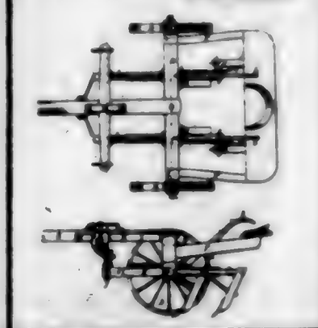


111,062. ROBERT BERRYMAN. WATER OR STEAM-VALVES.



111,063. HIRAM E. BOWEN, I. D. RODNETT. PLOWS.

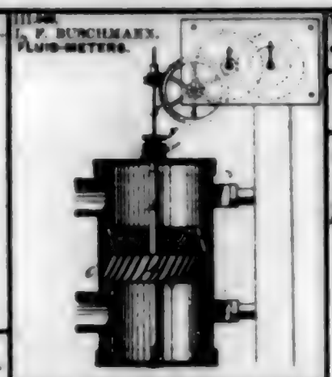
111,034. HORACE C. BRADFORD. COTTON-SEED HULLERS.



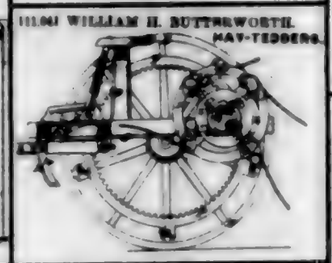
111,035. JOSEPH H. BRADLEY. FEED-CUTTERS.

111,036. ADOLPH BRAMS. LEMUEL HALLADAY. STEAM-BOILERS.

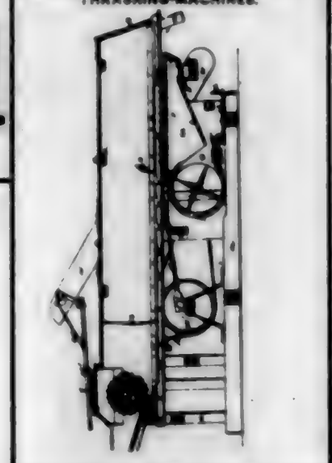
111,037. GEORGE WALTER BRONSON. CULTIVATORS.



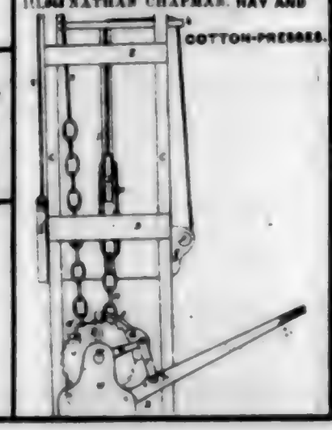
111,038. FRANKLIN W. BROOKS. STAMP-CANCELERS.



111,039. F. J. BURCHAM. BOOTS AND SHOES.

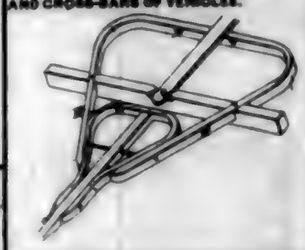


111,040. F. BURCHMANN. FLUID-METERS.

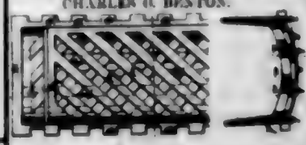


111,041. WILLIAM H. BUTTERWORTH. HAY-TEDDERS.

111,042. HENRY RUSSELL CANIFF. THRASHING-MACHINES.

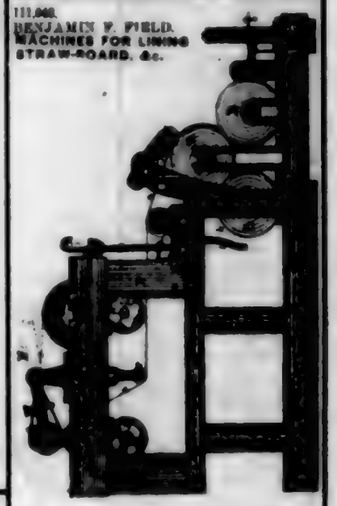


111,043. NATHAN CHAPMAN. HAY AND COTTON-PRESSES.

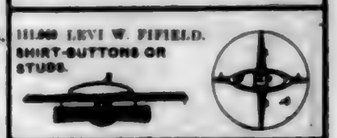


111,044. WILLIAM H. CHILSON. MEDICAL COMPOUND PILLS FOR CURE OF COLDS, &c.

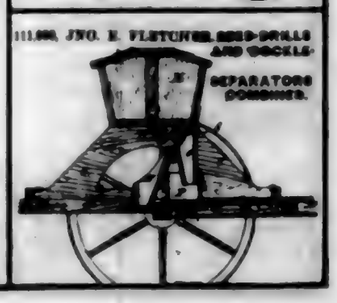
111,045. B. M. DETWILER. S. G. VAN GILDER. PRESERVING WOODS.



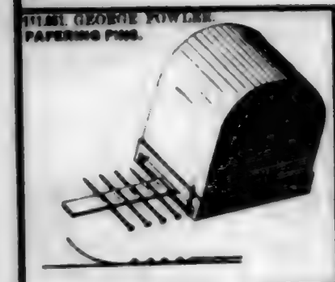
111,046. GERARD DOAN. THEODORE WALLIS. GEORGE D. MORELAND. HOUNDS, SWAY-BARS, TONGUE-BRACES, AND CROSS-BARS OF VEHICLES.



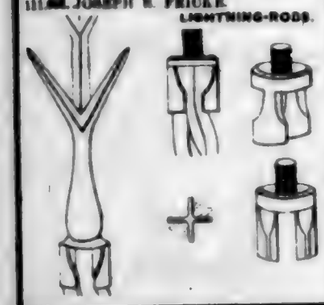
111,047. ALBERT FICKETT GRATE-BARS. CHARLES G. BESTON.



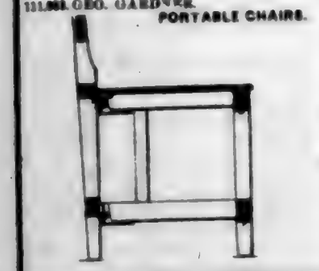
111,048. BENJAMIN F. FIELD. MACHINES FOR LINING STRAW-BOARD, &c.



111,049. LEVI W. FIFIELD. SHIRT-BUTTONS OR STUDS.

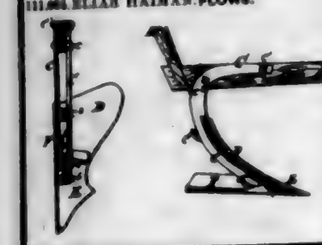


111,050. JNO. E. FLETCHER. SEED-DRILLS AND SOCKLE-SEPARATORS AND DOROMES.

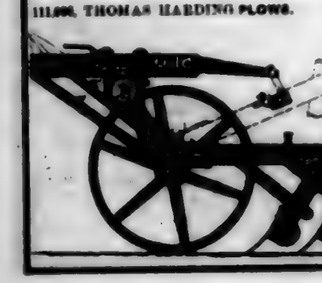


111,051. GEORGE FOWLER. PAPERING PINS.

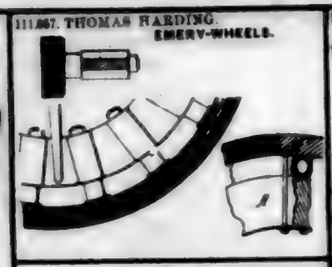
111,052. JOSEPH B. FRICKE. LIGHTNING-RODS.



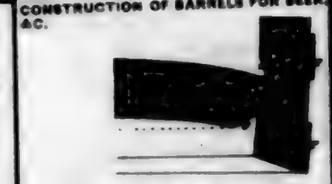
111,053. GEO. GARDNER. PORTABLE CHAIRS.



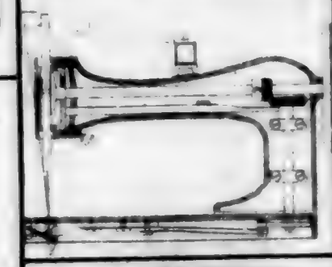
111,054. ALFRED M. GEORGE. FIRE-TONGS.



111,055. ELIAS HAIMAN. PLOWS.

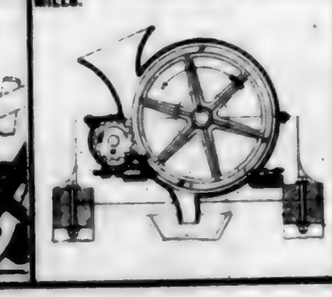


111,056. THOMAS HARDING. PLOWS.

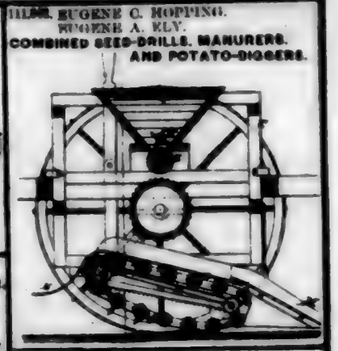


111,057. THOMAS HARDING. EMERY-WHEELS.

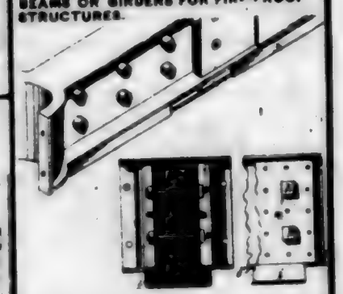
111,058. MATTHEW HAWE. CONSTRUCTION OF BARRELS FOR BEER, &C.



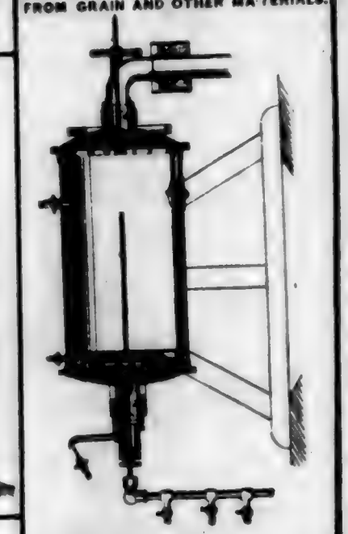
111,059. ARTHUR HELWIG. SEWING-MACHINES.



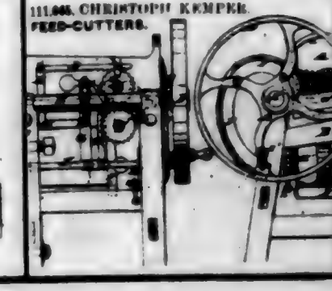
111,060. F. G. HERBE. WATER-METERS.



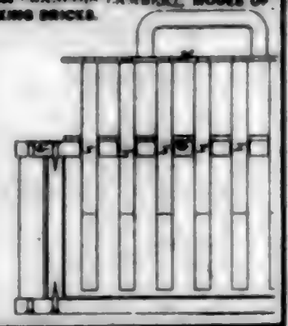
111,061. GEORGE C. HOHENSTEIN. C. T. GLAEBER. CRUSHING AND HULLING ATTACHMENTS TO GRINDING-MILLS.



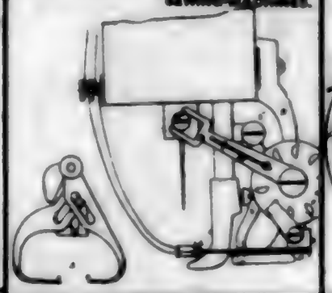
111,062. EUGENE C. HOPPING. EUGENE A. ELY. COMBINED SEED-DRILLS, MANURERS, AND POTATO-DIGGERS.



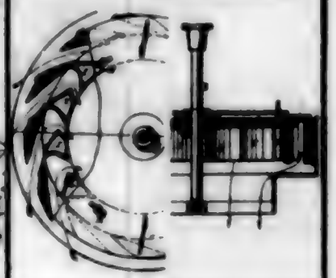
111,063. W. W. HUGHES. BEAMS OR GIRDERS FOR FIRE-PROOF STRUCTURES.



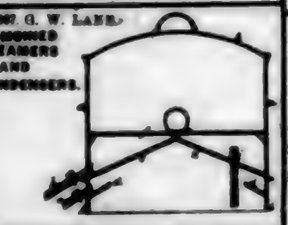
111,064. ELIAS S. HUTCHINSON. APPARATUS FOR SEPARATING OIL FROM GRAIN AND OTHER MATERIALS.



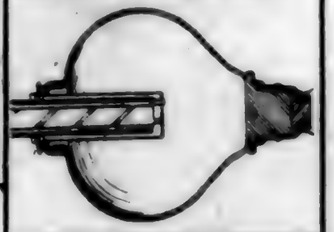
111,065. CHRISTOPH KEMPER. FEED-CUTTERS.



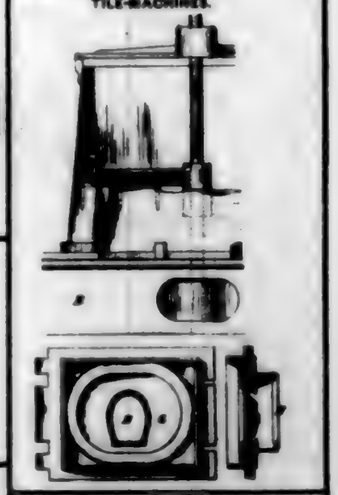
111,038 FRANCIS LAWRENCE, MODES OF MAKING BRICKS.



111,071 WILLIAM A. MACK. EMBROIDERING ATTACHMENTS FOR SEWING-MACHINES.

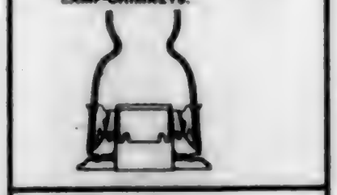


111,077 ALBERT L. MOORE, NORMAN S. PARKER. WATER-WHEELS.



111,037 G. W. LANE. CONDENSED STEAMERS AND CONDENSERS.

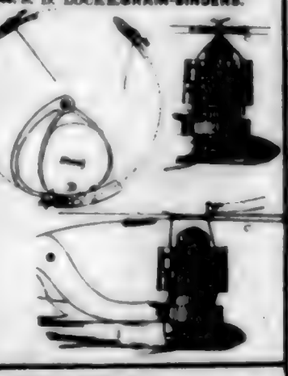
111,073. RUFUS S. MERRILL, LAMPS.



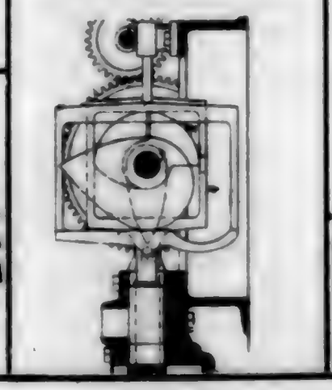
111,078. ALBERT MOORHOUSE. TILE-MACHINES.

111,068. ALBERT D. LAWS, GILDER.

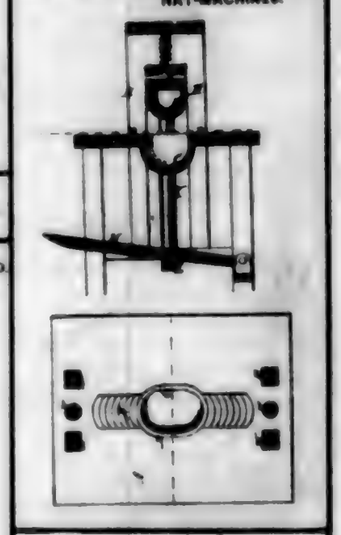
111,073. RUFUS S. MERRILL. LAMP-CHIMNEYS.



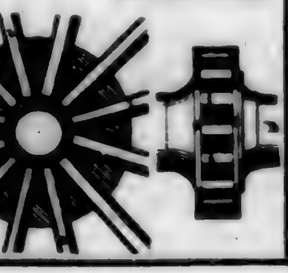
111,074. RUFUS S. MERRILL. LAMP-BURNERS.



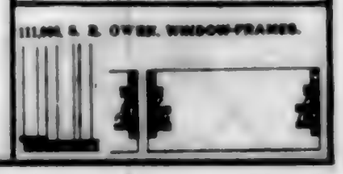
111,076. L. OTTO P. MEYER. MANUFACTURE OF SAFETY-MATCHES.



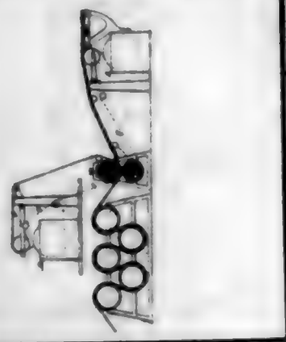
111,069. S. D. LOCKE, GRAIN-BINDERS.



111,075. JAMES ALLAIRE MILLHOLLAND. BRICK-PRESSES.

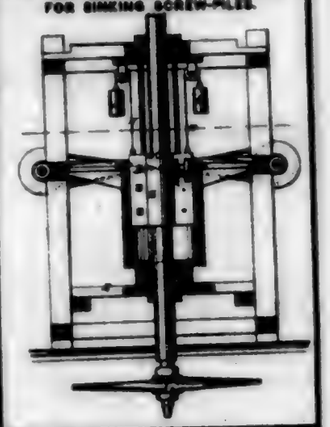


111,079. CHARLES M. OSGOOD. HAT-MACHINES.

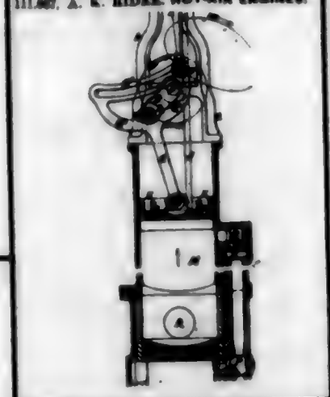


111,070 WM. I. LYMAN. HUBS FOR VEHICLES.

111,080. S. B. OWEN. WINDOW-FRAMES.

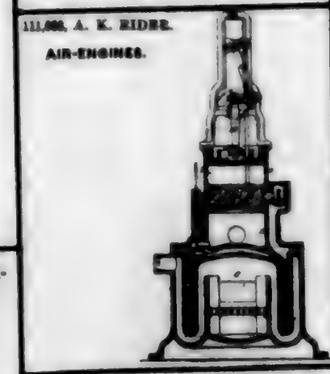


111,051. CLAUDIUS A. PEARE. MACHINES FOR THE MANUFACTURE OF PAPER CARPET-LINING.



111,052. JAMES H. REILLY. MATTING APPARATUS.

111,053. WM. EDDY SMITH. MACHINES WM. REUSCHEL. FOR SINKING SCREW-PILES.

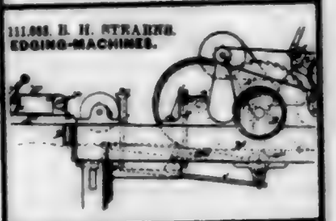


111,067. A. K. RIDER. HOT-AIR ENGINES.

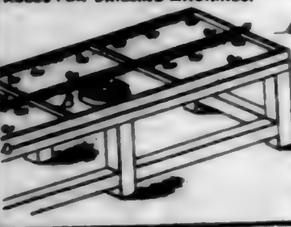
111,068. G. B. POWTLETHWAITE. MACHINES FOR MAKING BOLTS AND NUTS.

111,069. A. K. RIDER. AIR-ENGINES.

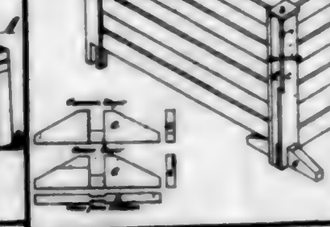
111,063. BENJAMIN F. POWER. TRACK-CLEARERS FOR MOWING-MACHINES.



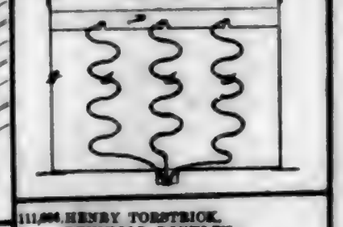
111,066. SOCRATES SCHOLFIELD. CIGAR-FILLINGS.



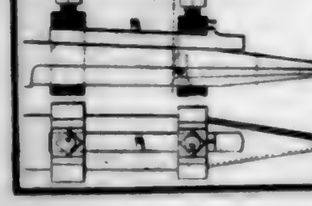
111,064. AARI. SWEET. EXTENSION-SCAFFOLDS.



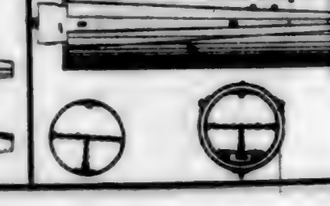
111,065. H. H. STRAHM. EDGING-MACHINES.



111,056. THOS. BEANEY. TABLES FOR DRILLING-MACHINES.

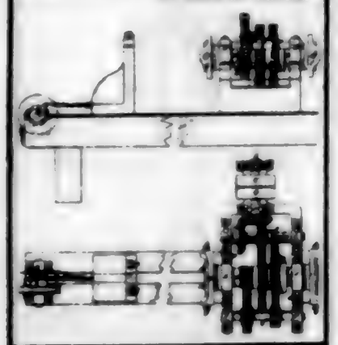


111,060. W. W. SHERMAN, FENCES.

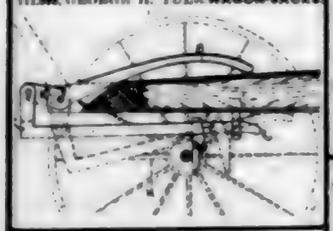


111,055. HENRY THURLOW. LUBRICATORS FOR AXLES.

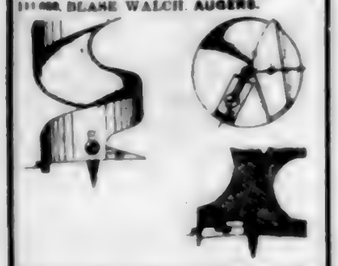
111,055. THOS. BEANEY. REAMING AND COUNTERSINKING-TOOLS.



111,061. WILLIAM SMITH. COLLAPSING CORE-BARRELS.

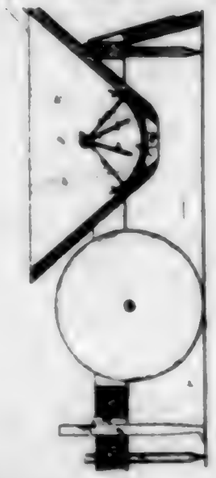


111,054. HENRY TORSTRICK, REINHOLD BOEKLEN. RAILROAD-SPIKES.

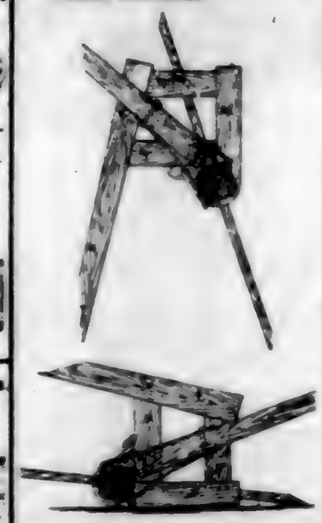


111,097 STEPHEN TUDDENHAM
MANUFACTURE OF ORNAMENTAL BARS OR RODS OF METAL.

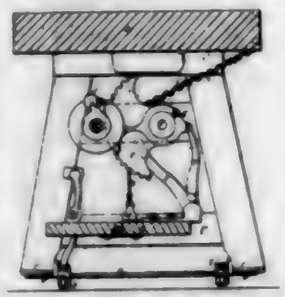
111,098 GEORGE H. TULK. WAGON-JACKS.



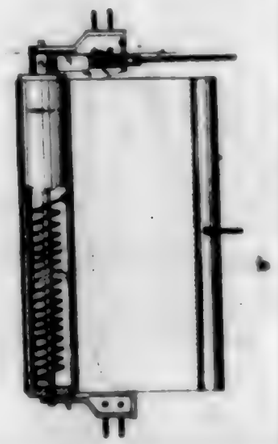
111,099 BLAKE WALCH. AUGERS.



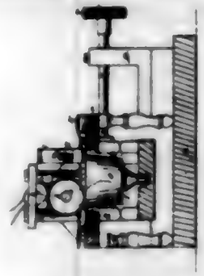
111,100 FRED. WALTON.
MANUFACTURE OF ARTIFICIAL LEATHER.



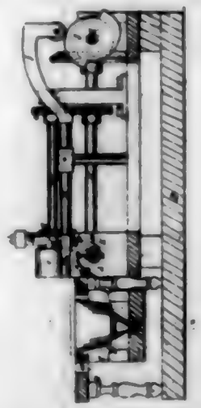
111,101 A. CHARLES WITHERS.
PLANTERS AND CULTIVATORS.



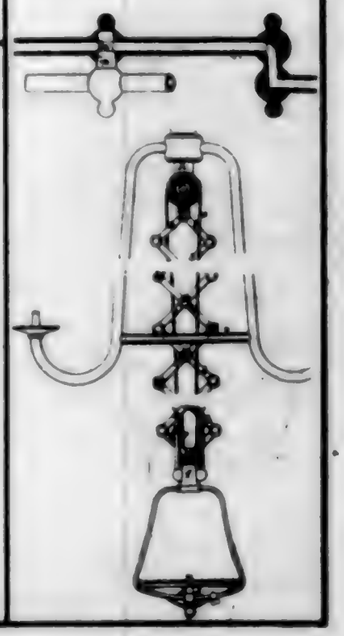
4,232 NEWCOMB M. BARNES.
HORSE HAY-RAKES.



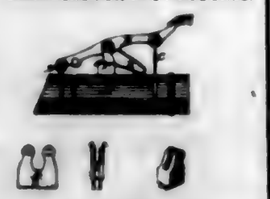
4,233 JOHN A. BRADSHAW.
WM. H. BROWN.
DARIUS WHITNEY.
TREADLES FOR SEWING-MACHINES.



4,234 WM. CAMPBELL.
CURTAIN OR SHADE-FIXTURES



4,235 WM. A. PENN.
MACHINES FOR FORMING THE BRIMS OF FELT-HATS.



4,236 SAML. B. H. VANCE.
APPARATUS FOR SUSPENDING GASOLIERS AND DROP-LIGHTS.

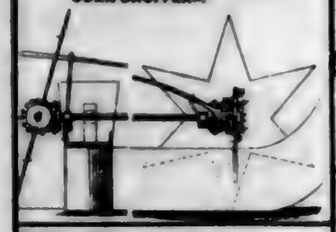
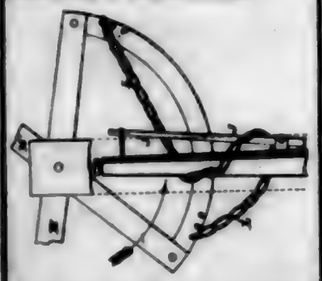
MEDICAL COMPOUNDS FOR THE CURE OF RHEUMATISM.

111,196. WILLIAM GLUE.
SPRING-CATCHES FOR DOORS.

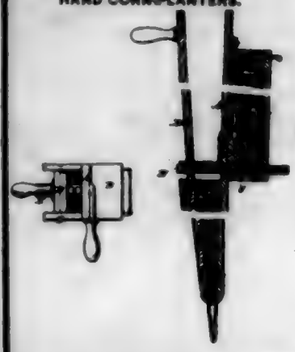
111,197. CHAS. GOODYEAR, Jr.
MACHINES FOR SEWING BOOTS AND SHOES.



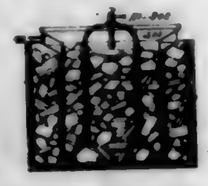
111,198. WILLIAM THOMAS GRANT.
COMPOUNDS FOR REMOVAL OF SCALE FROM STEAM-BOILERS.



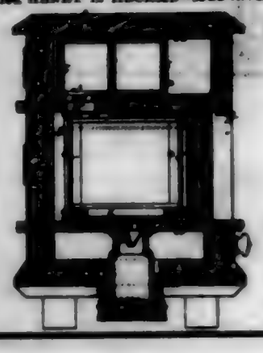
111,199. FRANKLIN T. GRIMES.
BASTER-GUIDES FOR SEWING-MACHINES.



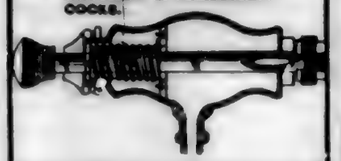
111,200. JACOB H. GROSS.
CORN-DROPPERS.



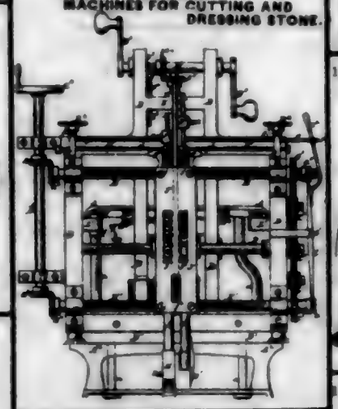
111,201. JOHN K. HARRIS. GATES.



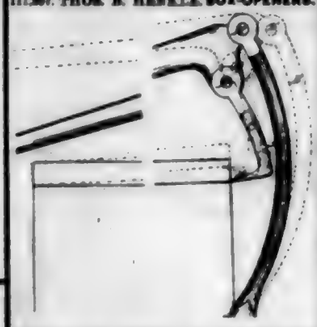
111,202. JAMES M. HARRISON.
HAND CORN-PLANTERS.



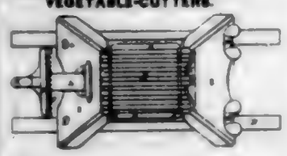
111,203. CARL WILH. HAUG.
BEER-COOLERS.



111,204. HENRY L. HECKMAN. BEE-HIVES.

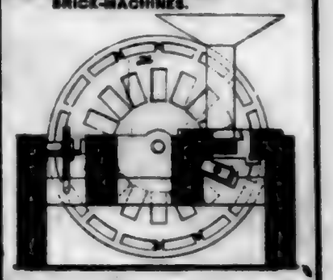


111,205. WILLIAM H. HEDGES.
MATTHEW B. CAMPFIELD.
COCKS.

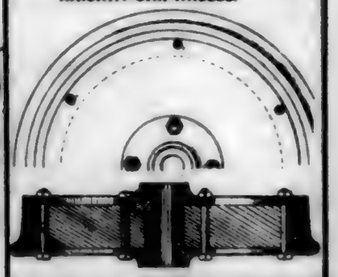


111,206. JACOB HEDRICK.
WILLIAM TASH.
HENRY KREIDLER.
MACHINES FOR CUTTING AND DRESSING STONE.

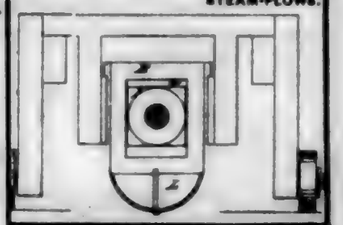
111,207. THOS. B. HENKLE. BOX-OPENERS.



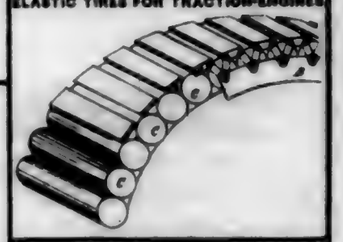
111,208. DAVID WALLACE HERSEY.
VEGETABLE-CUTTERS.



111,209. FRANCIS MARCH HOLMES.
FOLDING-CHAIRS.

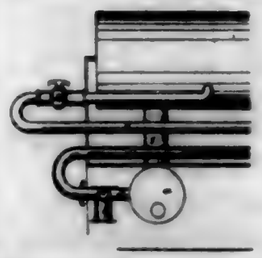


111,210. ERWIN C. HUBBARD.
BRICK-MACHINES.



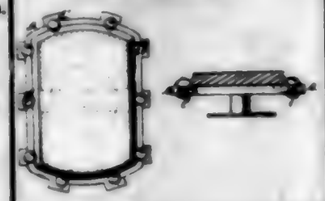
111,211. LEWIS B. HUNT.
RAILWAY-CAR WHEELS.

111,212. OLIVER HYDE.
OPERATING CUTTERS FOR STEAM-PLOWS.

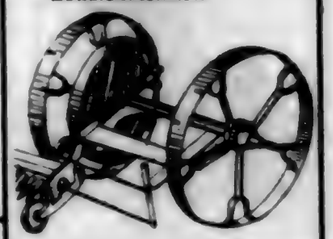


111,213. OLIVER HYDE.
ELASTIC TIRES FOR TRACTION-ENGINES.

111,214. SAMUEL B. JENKS.
FREDERICK A. HOLCOMB.
MANUFACTURE OF LEATHER.

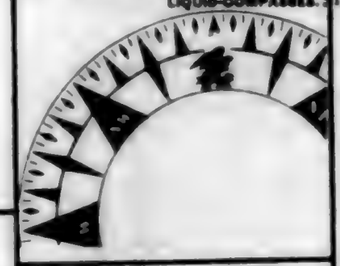


111,215. EDWARD L. JONES.
COMBINED FEED-WATER HEATERS AND CIRCULATORS.

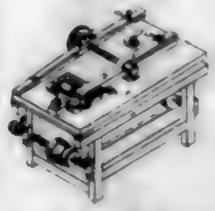


111,248 SAMUEL W. PUTNAM, Jr.
MACHINES FOR CUTTING SCREW-THREADS ON BOLTS.

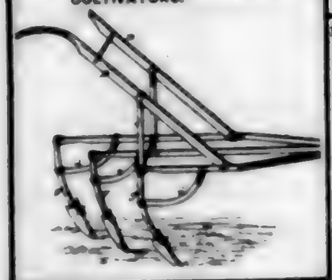
111,249 WILLIAM BIKER
SETTING STONES, &c.



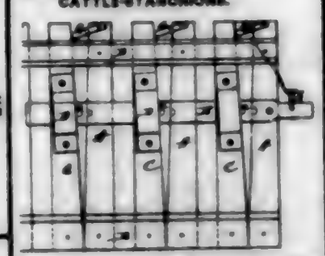
111,250 GEO. T. BAVARY.
MOWING-MACHINES.



111,249 EMIL RATH.
STAIR-ROD FASTENINGS.

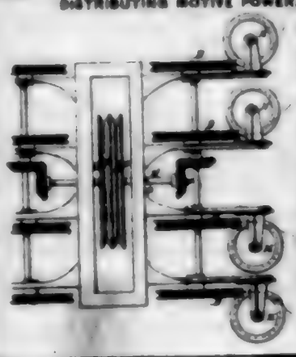


111,254 EDW. A. RITCHIE.
CARDS FOR MARINERS' LIQUID-COMPASSES.

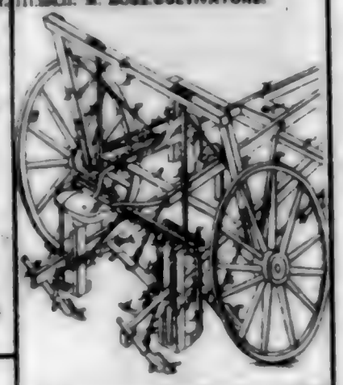


111,253 CHARLES SCHLEICHER.
LATH-MACHINES.

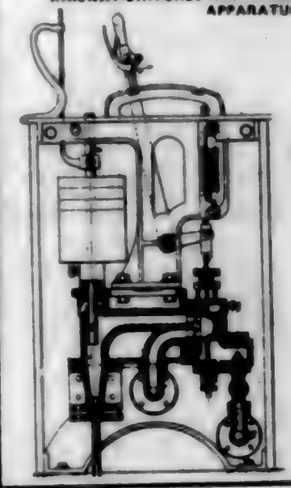
111,252 WILLIAM BENJAMIN READ.
CULTIVATORS.



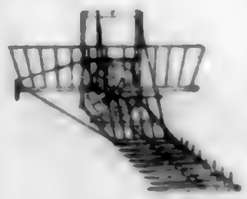
111,254 JOSHUA A. ROSBACK.
CATTLE-STANCHIONS.



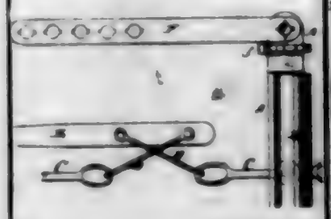
111,255 EDE H. SCHMULTS.
JACOB BAKER.
ICE-PICKS AND HOOKS.



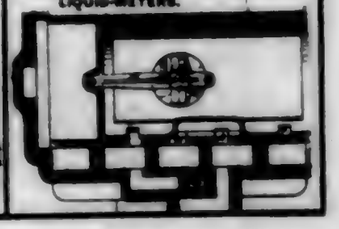
111,251 JAMES RICHMOND.
MACHINERY FOR TRANSMITTING AND DISTRIBUTING MOTIVE POWER.



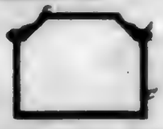
111,256 H. M. RUSE. CULTIVATORS.



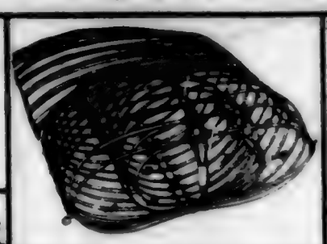
111,261 ADOLPH SCHNABEL,
TH. HERRING.
RAILWAY-SWITCHES AND SIGNAL APPARATUS.



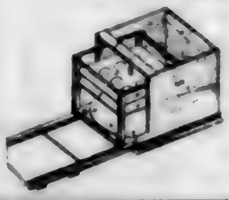
111,258 JOHN P. RIDEOUT.
HAY-LOADERS.



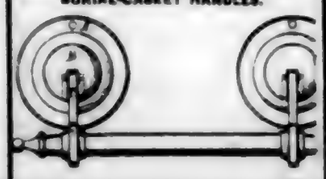
111,257 GEORGE W. RUNK.
BELT-TIGHTENERS.



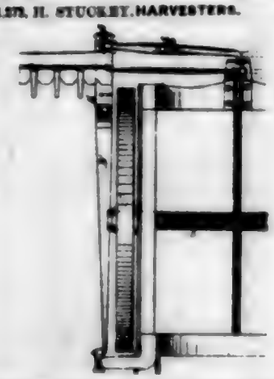
111,259 HENRY C. SERGEANT.
LIQUID-METERS.



111,263 FRANK B. SHEARER.
BURIAL-CASES.



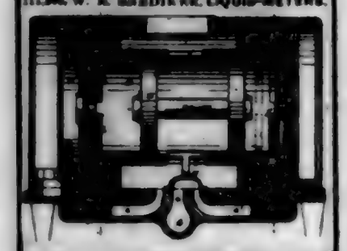
111,270 NICHS. H. SHIPLEY.
APPARATUS AND PROCESSES FOR CANNING AND PRESERVING MEATS, FRUITS, VEGETABLES, &c.



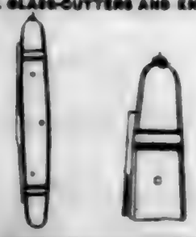
111,271 CLARK STRONG.
BURIAL-CASKET HANDLES.

111,272 HENRY SHOEMAKER.
JOHN SHOEMAKER.
ROCK-DRILLS.

111,273 H. STUCKEY. HARVESTERS.

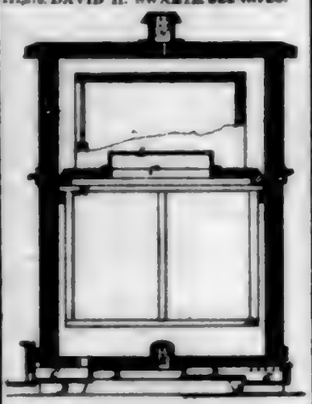


111,266 LYMAN W. SIBLEY. GATES.

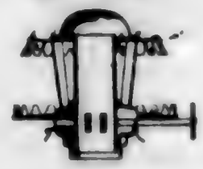


111,267 BENJAMIN R. SMITH.
JOHN CAMPBELL HARRIS.
PLASTERS FOR WALLS.

111,268 W. R. SHEDIKER. LIQUID-METERS.

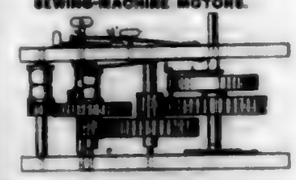


111,269 TELESPHORE SPENARD
STEEL GLASS-CUTTERS AND KNIVES.



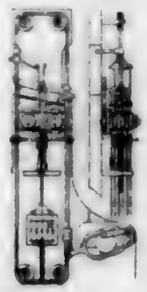
111,274 TIMOTHY S. SPERRY.
BOLSTERS AND PILLOWS.

111,275 DAVID H. SWARTS. BEE-HIVES.

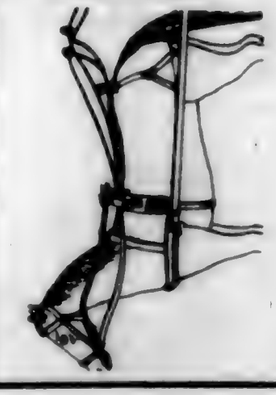


111,276 ALVIN TAPLIN.
LAMP-BURNERS.

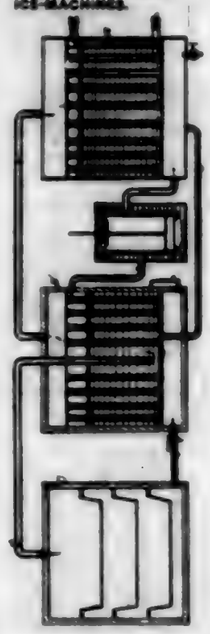
111,276 EBEN C. THAXTER.
SHUTTLES FOR SEWING-MACHINES.



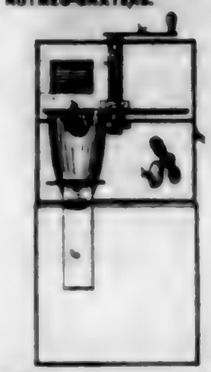
111,278 WM. C. THORNTON.
JAMES D. COOLEY.
SEWING-MACHINE MOTORS.



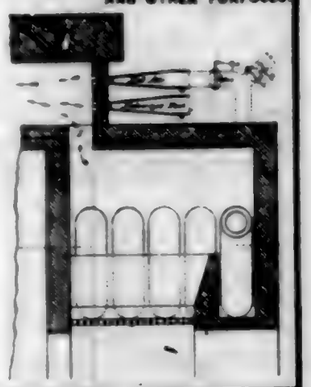
111,277 JOHN J. TOMLINSON.
MILLSTONE-DRIVERS.



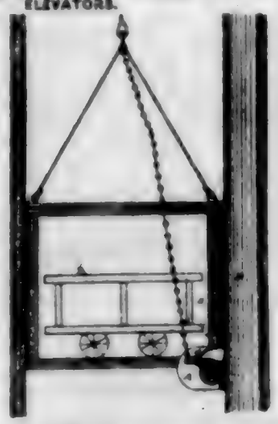
111,278 HAMILTON E. TOWLE. LOOMS.



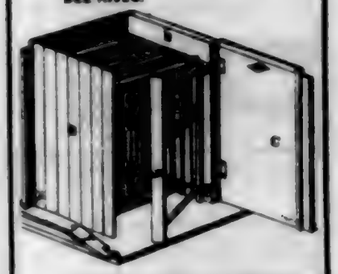
111,279 ROSS TOWNSEND.
REIN-SUPPORTERS.



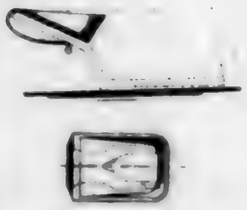
111,286. ORAZIO LUGO.
DAVID K. TUTTLE.
ICE-MACHINES.



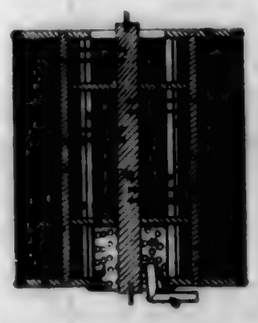
111,287. DEWITT C. WARNER.
NUTMEG-GRATERS.



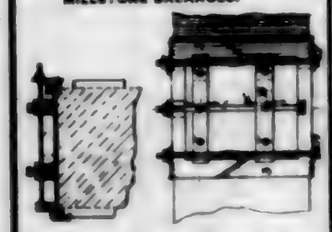
111,288. JAMES D. WHELPLEY.
JACOB J. STOBER.
GAS-GENERATING AND BLAST-HEATING APPARATUS FOR METAL-LURGIC AND OTHER PURPOSES.



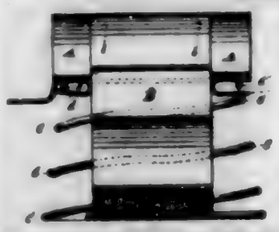
111,289. JOHN JACOB WEBER.
ELEVATORS.



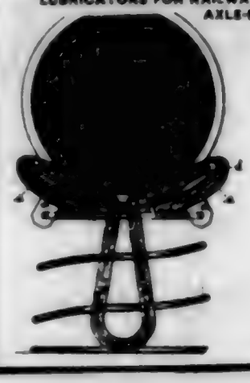
111,290. ASBURY WILKINSON.
BEE-HIVES.



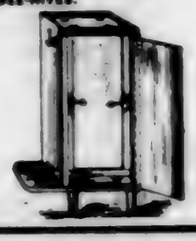
111,291. JOHN T. WALKER. SALT-CELLARS.



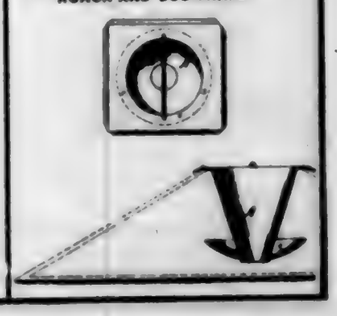
111,292. ALLISON L. WILLIAMS.
FLOUR-BOLTING REELS.



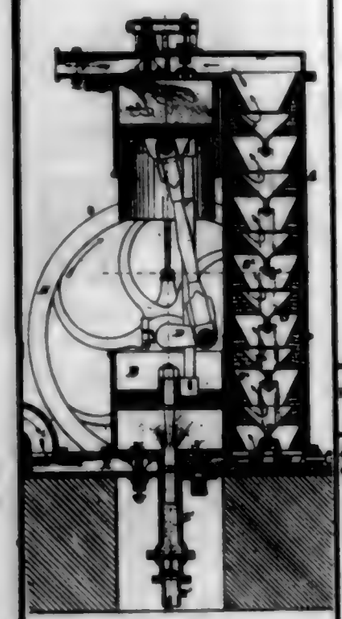
111,293. JOHN WALSH.
MILLSTONE BALANCES.



111,294. ISAAC P. WENDELL.
LUBRICATORS FOR RAILWAY-CAR AXLES.

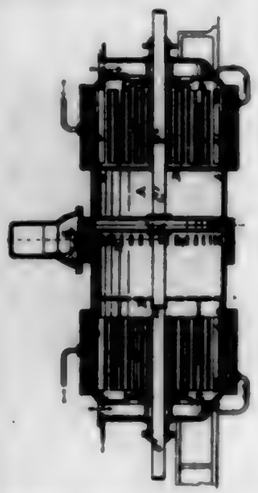


111,295. ISAAC P. WENDELL.
LUBRICATORS FOR RAILWAY-CAR AXLE-BOXES.

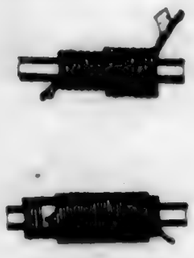


111,296. WILLIAM WAMBACH.
BEE-HIVES.

111,297. THOMAS WILLIAMS.
ROACH AND BUG-TRAPS

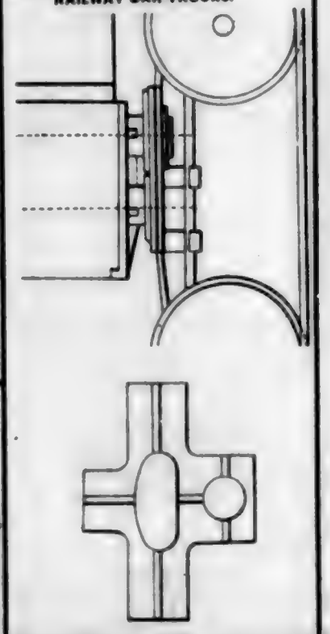


111,284. FR. WIEDHAUSEN.
APPARATUS FOR MAKING ICE AND COOLING.



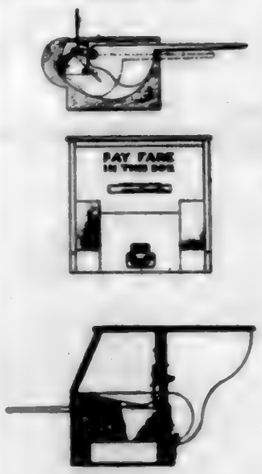
111,285. FRANZ WIEDHAUSEN.
IMPROVEMENT IN ICE-MACHINES.

111,286. ISAAC J. WYMAN.
PAINTS FOR SHIPS' BOTTOMS.

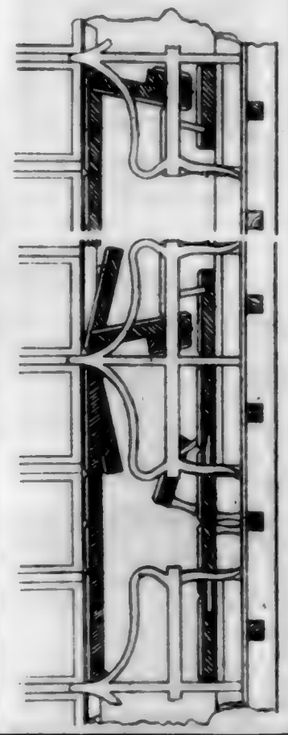


4,237. HENRY M. PAINE.
CONSTRUCTION OF ELECTRO-MAGNETS.

111,294. FINLEY J. WEIGHT,
LIVINGSTON W. WANDELL.
CAR-STARTERS.



4,235. WILLIAM PETTIT.
RAILWAY CAR-TRUCKS.



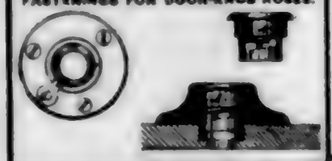
4,239. L. F. ROBERTSON.
COMPOUNDS TO INCREASE THE FRICTION BETWEEN BELTS AND PULLEYS.

4,240. J. B. SLAWSON.
PASSENGER-FARE BOXES.

4,241. T. T. WOODRUFF.
RAILROAD-CAR SEATS AND COUCHES.

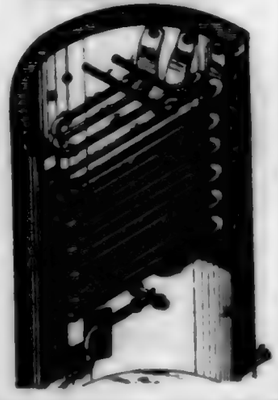
ILLUSTRATIONS OF PATENTS

ISSUED FROM

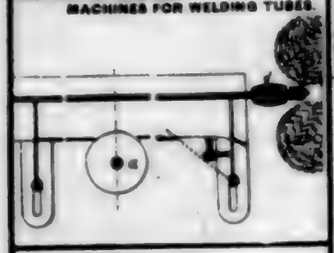


THE UNITED STATES PATENT OFFICE

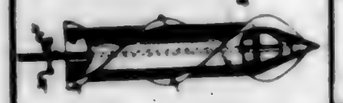
JAN. 31, 1871.



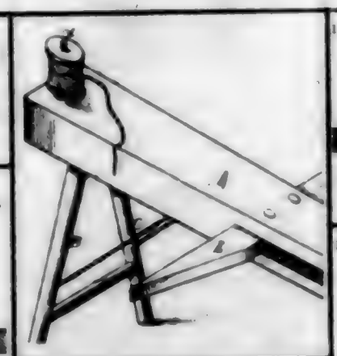
111,296. EDWIN H. ADGATE.
ADJUSTABLE REAMERS.



111,297. JAMES M. ADOLPHUS.
FASTENINGS FOR DOOR-KNOB ROSES.

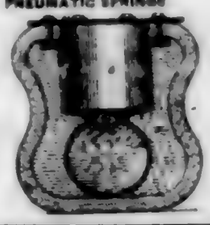


111,298. CHRISTOPHER ARRESS, FRANK KAMMAN.
STEAM-GENERATORS.

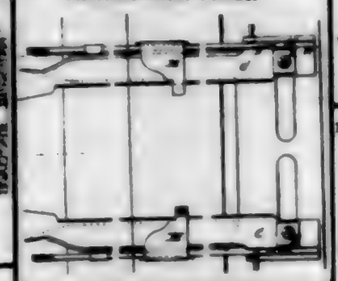


111,299. W. C. ALLISON
MACHINES FOR WELDING TUBES.

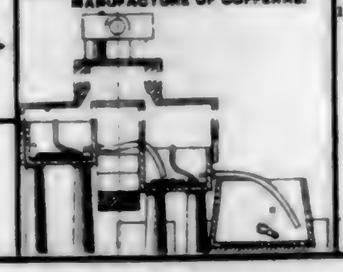
111,300. WILLIAM ALTMAN
WELL-AUGERS.



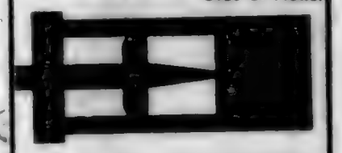
111,301. JOHN ASTRAM, ELWOOD B. MULLIN.
FODDER-STANDS.



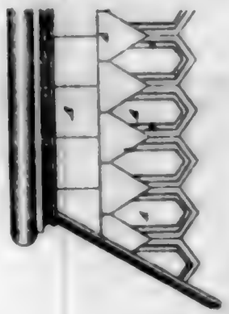
111,302. THOMAS M. BELL. MILK-CANS.



111,303. JOHN BEVAN, SEN. W. HITCHCOCK
PNEUMATIC SPRINGS

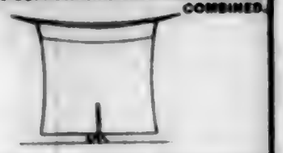


111,304. A. L. BEVANS.
PRINTING-PRESS GUIDES.



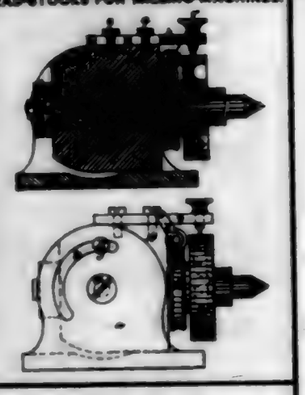
111,305. E. DE WITT BIRCH
MANUFACTURE OF COPPERAS.

111,306. BORT. BLAKE.
APPARATUS FOR OPENING THE EYES OF PICKS.

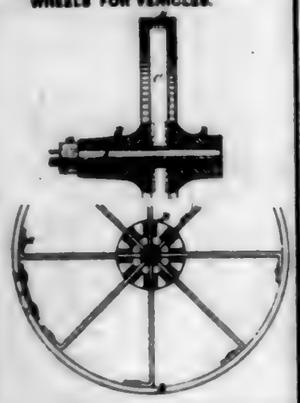


111,307. GEORGE W. BLISS.
METALLIC ROOFINGS.

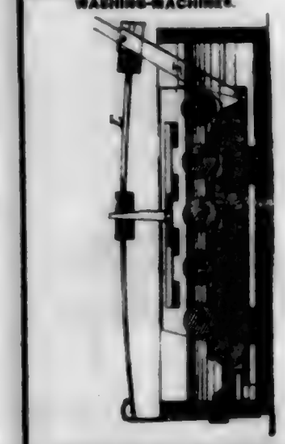
111,308. OLPHA BONNEY, Jr.
HORSE HAY-RAKES.



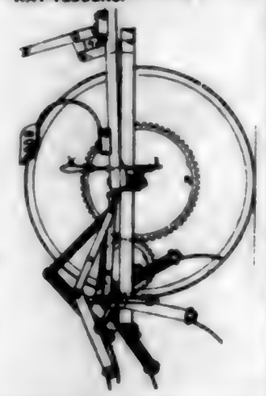
111,309. J. A. BOSTHWICK.
HAT-SUPPORTERS AND VENTILATORS COMBINED.



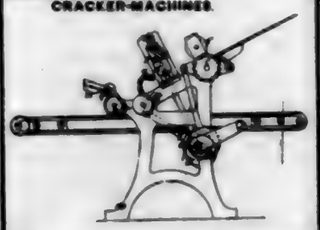
111,310. ARTHUR BRADSHAW.
BEE-HIVES.



111,311. AMOS H. BRAINARD.
HEAD-STOCKS FOR MILLING-MACHINES.



111,312. ALEXANDER D. BROWN, 2d.
WHEELS FOR VEHICLES.

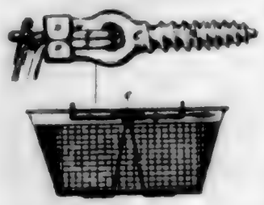


111,313. EDMUND P. BROWN.
WASHING-MACHINES.

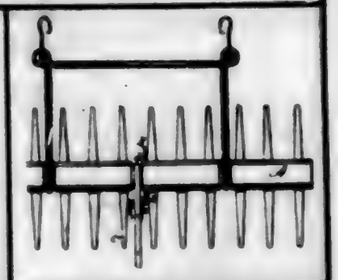
111,314. EZEKIEL W. BULLARD.
HAY-TEDDERS.

111,315. WM. CAIRNS.
CRACKER-MACHINES.

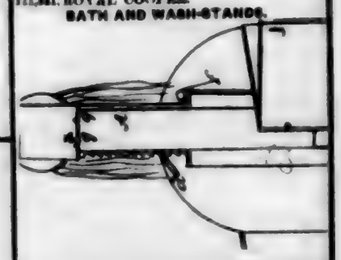
111,316. H. CAMP. PUMPS.



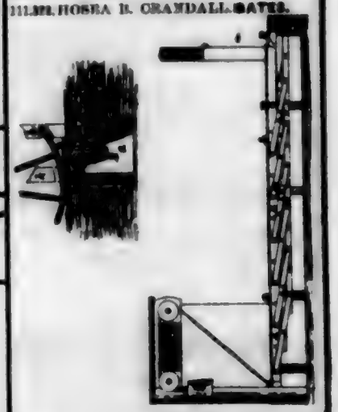
111,317. J. H. CHAPPEL.
CULINARY VESSELS.



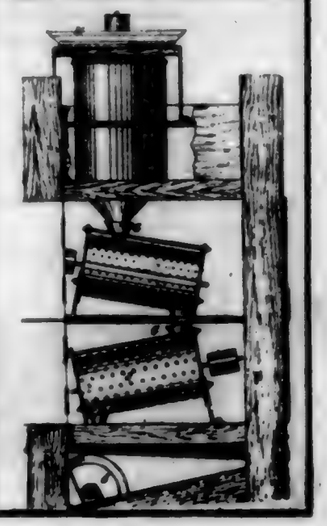
111,318. DECIUS W. CLARK.
COMPOUNDS FOR ENAMELING BRICKS.



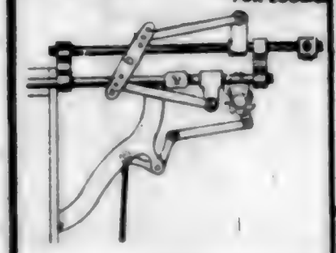
111,319. WM. F. COLLIER.
CORN-POPPERS.



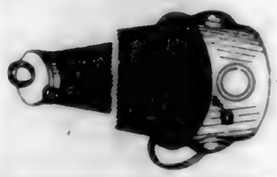
111,320. ISAAC N. CONDRA.
HORSE HAY-RAKES.



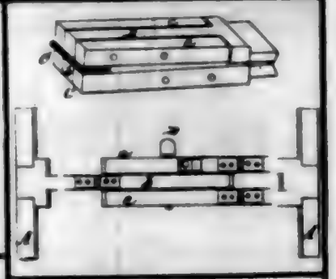
111,321. ROYAL COOPER.
BATH AND WASH-STANDS.



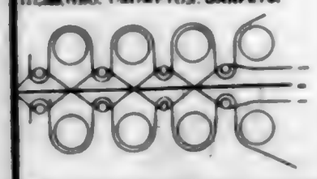
111,322. HOSEA B. CRANDALL, GATES.



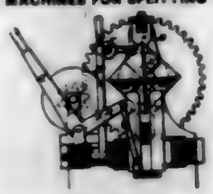
111,323. ANDREW CRAWFORD, IRAM D. CRAWFORD.
GRAIN, COFFEE, AND RICE-CLEANERS.



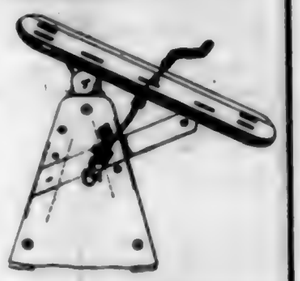
111,324. GEO. CROMPTON.
HARNESS-OPERATING MECHANISMS FOR LOOMS.



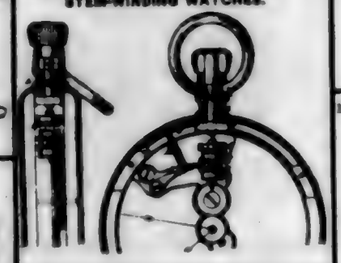
111,325. HARRIET A. FARNAM.
FLY-CATCHERS.



111,326. GEO. CROMPTON. CARPETS.

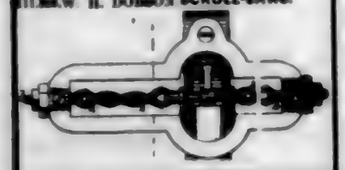


111,327. FRANK J. CULVER.
PLATFORM HORSE-POWERS.

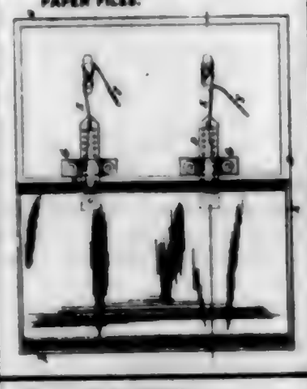


111,328. FRANK FICHT.
MACHINES FOR SPLITTING WOOD.

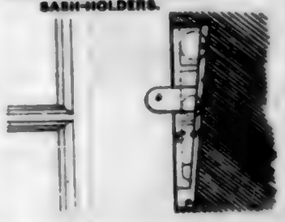
111,329. GEORGE B. GARLINGHOUSE.
ROAD-SCRAPERS.



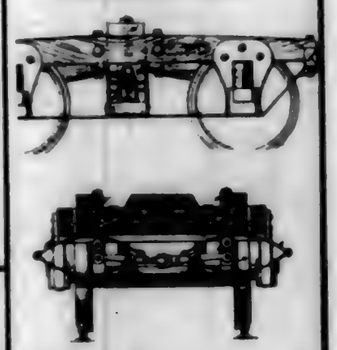
111,330. WALTER H. FITZ GERALD.
STEM-WINDING WATCHES.



111,331. MOSES W. DILLINGHAM.
SCREW-DRIVERS.

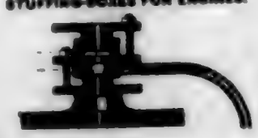


111,332. W. H. DOBSON. SCROLL-SAWS.



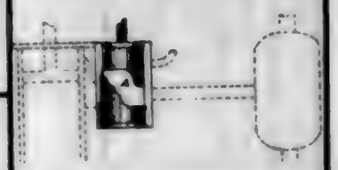
111,333. JOHN G. FLOYD, Jr.
PAPER FILES.

111,334. PHILETUS W. GATES.
SASH-HOLDERS.

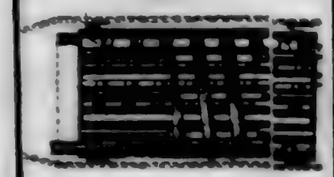


111,335. CHAS. GRAHAM
RAILWAY-CAR TRUCKS.

111,336. JOEL A. H. ELLIS.
COMPOUND LIQUIDS FOR USE IN VAPOR-ENGINES.

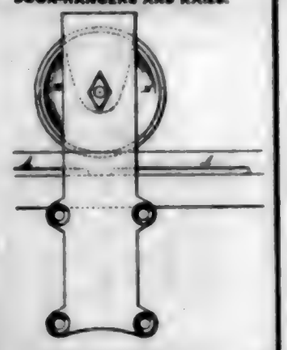


111,337. JOEL A. H. ELLIS.
STUFFING-BOXES FOR ENGINES.

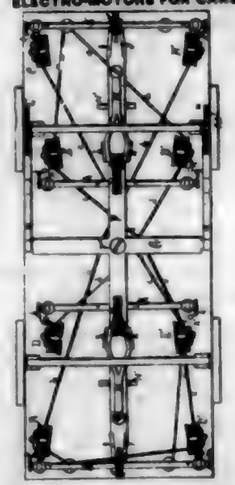


111,338. JAMES M. FREAR.
DAMPERS.

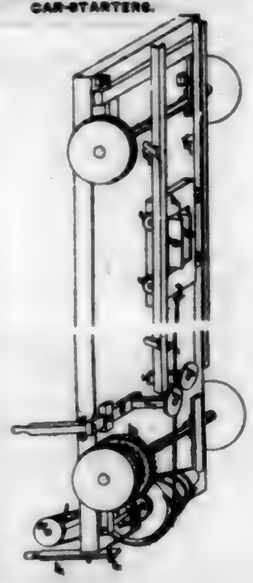
111,339. JOSEPH F. HAMILTON.
VALVES FOR STEAM-PUMPS.



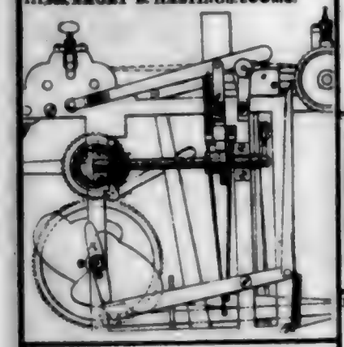
111,340. JOEL A. H. ELLIS.
VAPOR-GENERATORS FOR VAPOR-ENGINES.



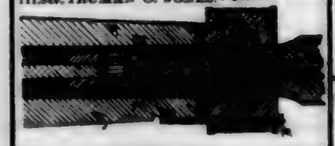
111,341. CHAS. R. GALE.
CARPET-STRETCHERS.



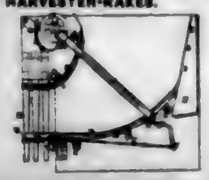
111,342. THOS. FOSTER HAMILTON.
DOOR-HANGERS AND RAILS.



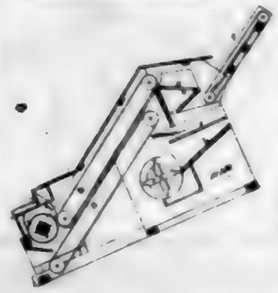
111,343. SOLOMON JONES.
ELECTRO-MOTORS FOR CARS.



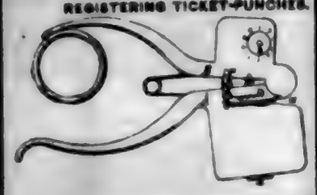
111,344. GEO. H. KIRKHAM.
CAR-STARTERS.



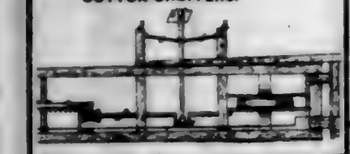
111,345. EMORY B. HASTINGS. LOOMS.



111,346. TRUMAN O. JONES. PUMPS.

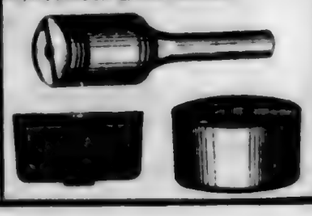


111,347. GEORGE W. HINES.
HARVESTER-RAKES.

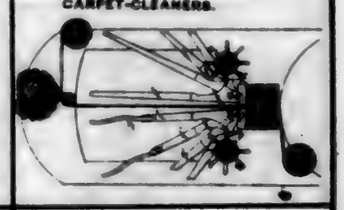


111,348. LOUIS KAMP.
CORN-SHELLING AND CLEANING-MACHINES.

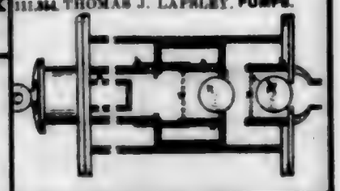
111,349. AUSTIN D. HOFFMAN.
REGISTERING TICKET-PUNCHES.



111,350. JOSEPH R. HOOD.
COTTON-CHOPPERS.

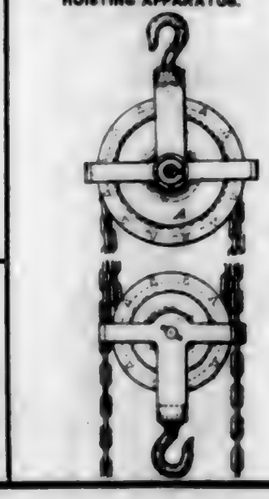


111,351. JOSIAH KIRBY.
BUNG-EXTRACTORS.



111,352. JOSIAH KIRBY. BUNGS.

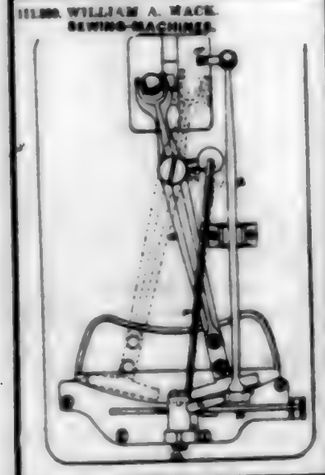
111,353. H. HENRY LINDHORST.
CARPET-CLEANERS.



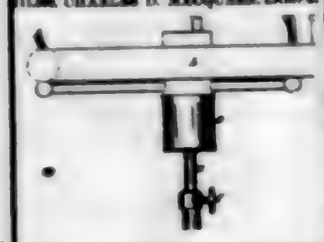
111,354. THOMAS J. LAFRLEY. PUMPS.

111,355. JAMES W. HUNTOON.
GRAIN-SEPARATORS FOR THRASHING-MACHINES.

111,356. ANDREW B. LIPSEY.
HOISTING APPARATUS.

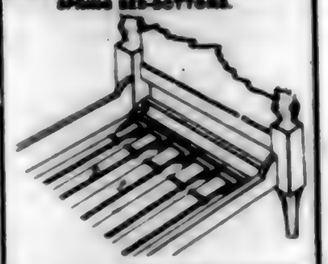


111,357. J. V. LOWENSTEIN.
FERTILIZING COMPOUNDS.



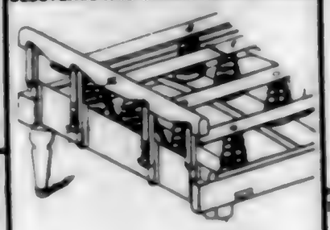
111,358. R. F. LYFORD, M. D.
DISINFECTING AND VENTILATING BURIAL VAULTS.

111,359. WILLIAM A. MACK.
SEWING-MACHINES.

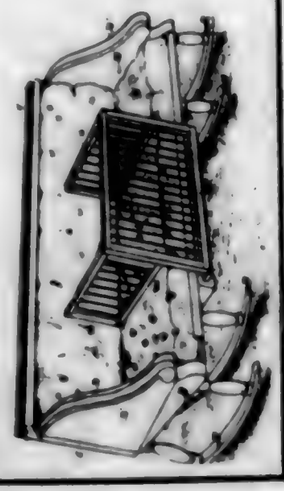


111,360. CHARLES D. MACQUEEN. LAMPS.

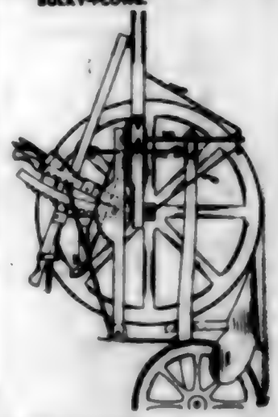
111,361. ELIAS MAGEUDER.
HOISTING-FORKS.



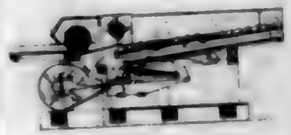
111,362. LEWIS WILLIAMS MAXSON.
SPRING BED-BOTTOMS.



111,363. ALONZO S. MAXWELL.
COVERS FOR GINS.



111,364. WILLIAM McARTHUR.
BEDSTEADS AND SPRING BED-BOTTOMS.



111,365. WILLIAM McARTHUR.
COMBINED ROCKING SOFAS AND BEDSTEADS.

111,366. EDWARD MELOY.
ABRAM B. STANLEY
SULKY-PLOWS.

111,367. JOSEPH H. MILLER.
THRASHING-MACHINES.

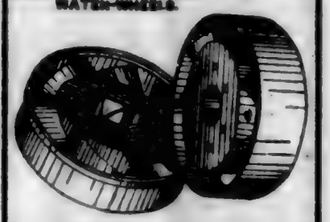
111,368. CHARLES S. MOORE.
MILAS A. MOORE.
LAMP-CHIMNEY AND DISH WASHERS.

111,369. FRANCIS MORANDI.
CULINARY VESSELS.

111,370. CAMPBELL MORFIT.
MANUFACTURE OF SUPERPHOSPHATE OF LIME.

111,371. HENRY T. MORSE.
FOLDING SETTEES.

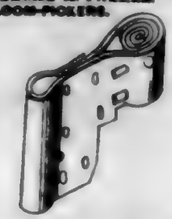
111,372. JAMES T. MOTT.
SPEEDERS AND CULTIVATORS.



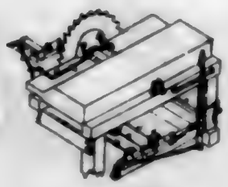
111,373. GEORGE MURRAY, Jr. VALVES.

111,374. ANDREW JACKSON NAVE.
WASHING-MACHINES.

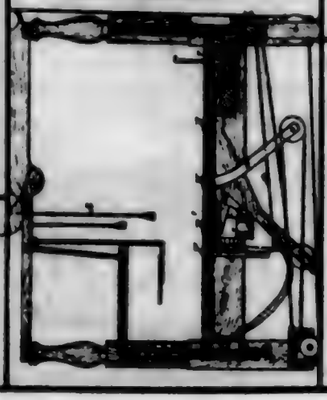
111,375. JACOB B. NEYMAN.
WATER-WHEELS.



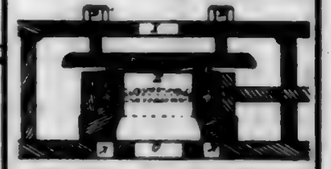
111,376. J. W. OSBORNE.
PRESERVING COMPOUNDS FOR THE HANDS, &c.



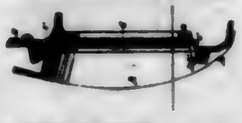
111,377. SETH WHITE PAINE.
SHOT-CARTRIDGES.



111,378. JEROME M. PARKER.
LOOM-PICKERS.

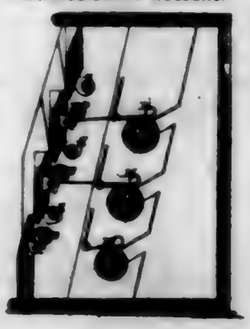


111,379. WILLIS PORTER.
SHINGLE-MACHINES.

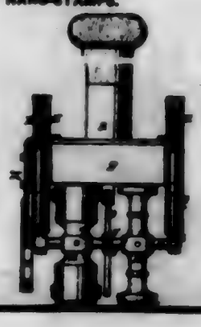


111,380. WM. O. REID.
INVALID BEDSTEADS.

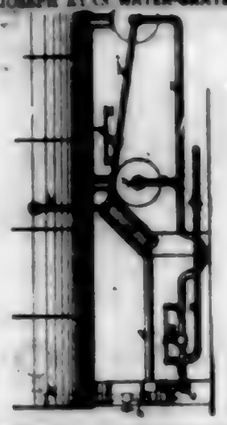
111,381. GEO. W. RICHARDSON.
BALANCE SLIDE-VALVES FOR STEAM-ENGINES.



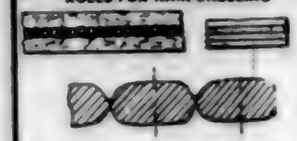
111,382. GEO. G. RICHMOND.
MICA-FRAMES FOR STOVES.



111,383. PARLEY D. ROOT.
PORTABLE SHELVES AND SUPPORTS.



111,384. JULIUS ROPER.
POSTAGE-STAMP HOLDERS.

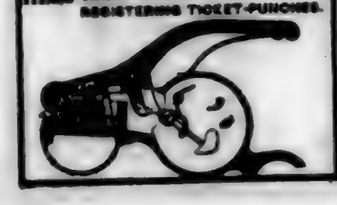


111,385. GOTTLIEB ROTZ.
NAME-STAMPS.

111,397. JOSEPH RYAN. WATER-GRATES.

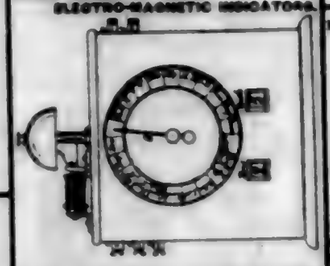
111,398. E. SCHEAUTE.
ROLLS FOR HAIR-DRESSING

111,399. JOHN G. C. SEARLE.
BASE-BURNING STOVES.



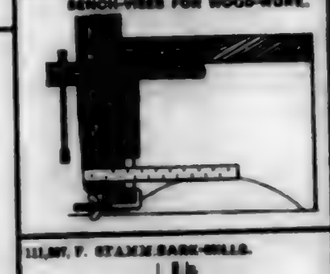
111,400. LOUIS SIEBERT.
JOHN WILSON LILLEY.
HEATERS FOR PAPER-RULING MACHINES.

111,401. JOSEPH SINGER.
CULTIVATOR-PLOWS.

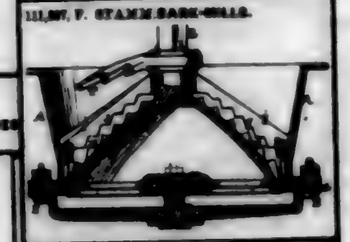


111,402. JAMES H. SMALL.
REGISTERING TICKET-PUNCHES.

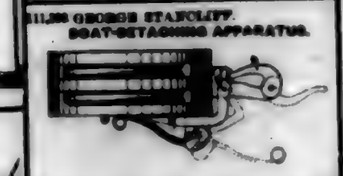
111,403. E. Y. SMITH. BURIAL-CASKETS.
J. S. WIDDIFIELD.



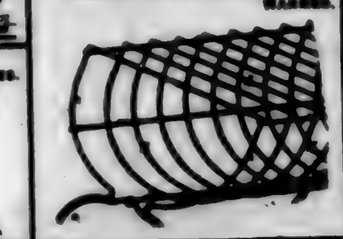
111,404. WESLEY D. SMITH.
ELECTRO-MAGNETIC INDICATORS.



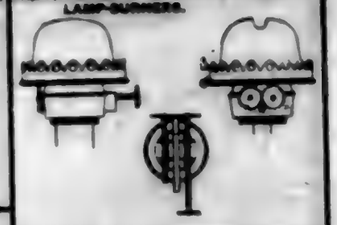
111,405. ANTONIO SOLARI.
COMPOSITIONS FOR FLOORS, PAVEMENTS, &c.



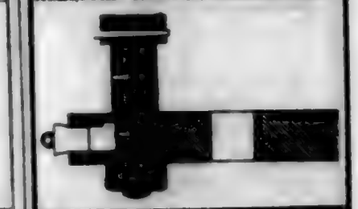
111,406. EDWIN SPRAGUE.
BENCH-VISES FOR WOOD-WORK.



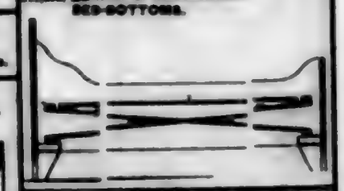
111,407. F. STAMM. BARK-MILLS.



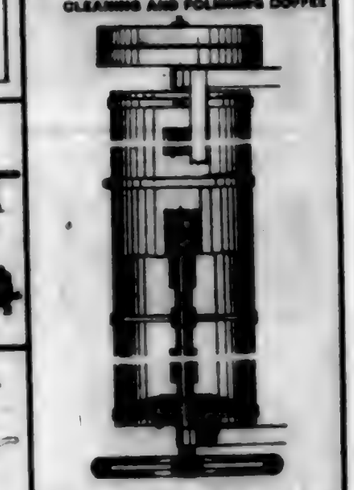
111,408. GEORGE STARCLIFF.
BOAT-DETACHING APPARATUS.



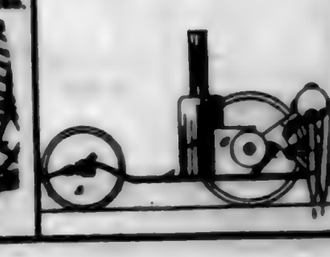
111,409. W. T. STOUTENBOROUGH.
MOLDERS FOR PLATES WHILE BEING WARMED.



111,410. FREEMAN AUGUSTUS TABER.
LAMP-BURNERS.

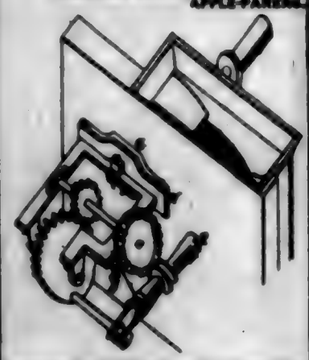


111,411. JOHN TENWICK. LUBRICATORS.

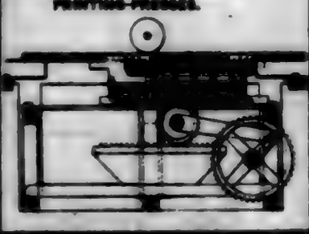


111,412. EDWIN C. THOMPSON.
SEE-BOTTOMS.

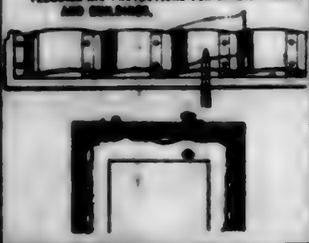
111,413. WILLIAM THOMPSON.
SAMUEL THOMPSON.
CLEANING AND POLISHING COFFEE



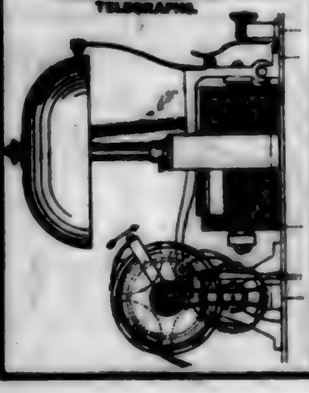
111,414. ISAAC P. TICE.
DIGGING-MACHINES.



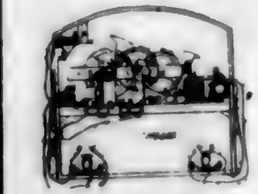
111,406. RICHD. VOSE.
CURTAIN-FIXTURES



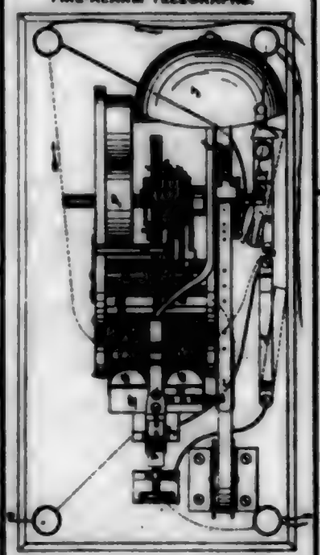
111,407. DEWITT C. WARNER.
COMBINED COFFEE-MILLS AND APPLE-PARERS.



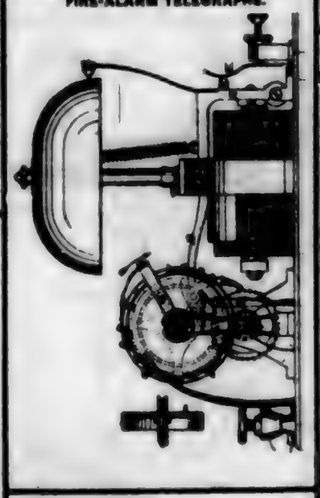
111,407. RICHARD C. WARWICK.
PRINTING-PRESSES.



111,408. WILLIAM B. WATKINS.
TELEGRAPHIC PROTECTIONS FOR SAFES, VAULTS, AND CHAMBERS.

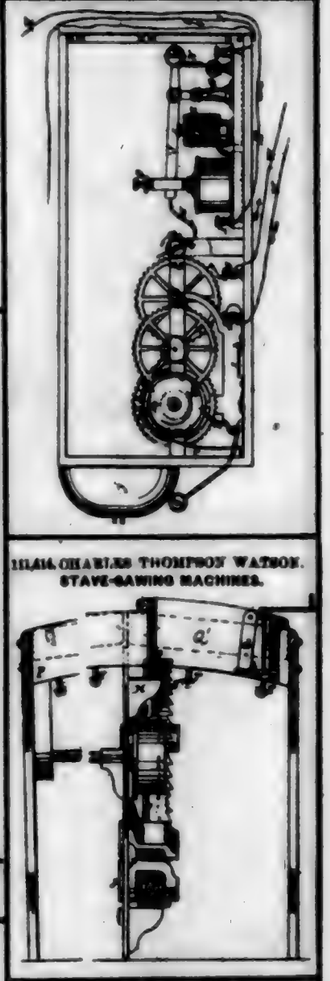


111,409. WILLIAM B. WATKINS.
BURGLAR-ALARM AND POLICE TELEGRAPHS.

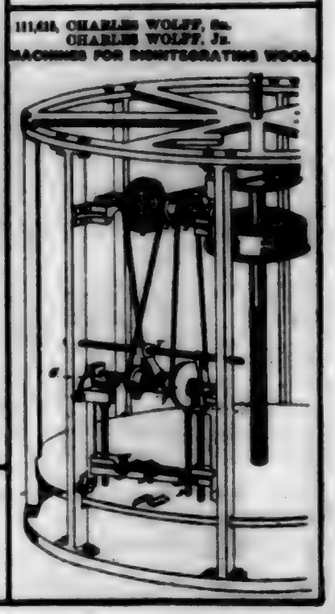


111,410. WILLIAM B. WATKINS.
FIRE-ALARM TELEGRAPHS.

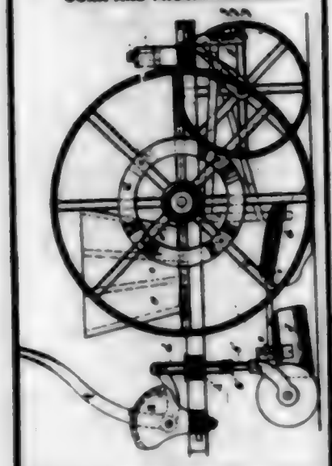
111,411. WILLIAM B. WATKINS.
FIRE-ALARM TELEGRAPHS.



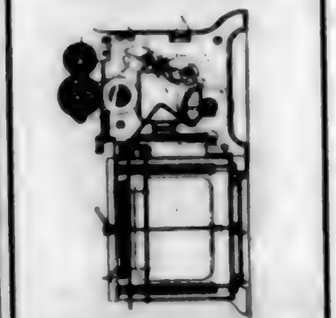
111,412. WILLIAM B. WATKINS.
FIRE-ALARM TELEGRAPHS.



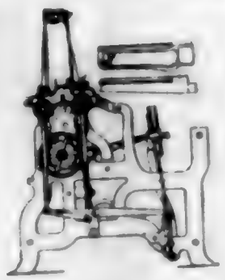
111,413. WILLIAM B. WATKINS.
FIRE-ALARM TELEGRAPHS.



111,414. CHARLES THOMPSON WATSON.
STAVE-SAWING MACHINES.



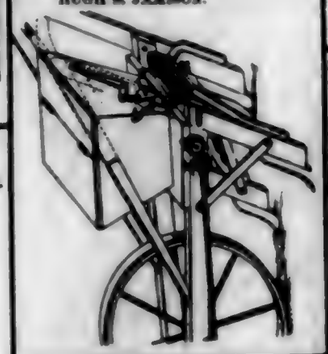
111,415. CHARLES WOLFF, Sr.
CHARLES WOLFF, Jr.
MACHINES FOR DISINTEGRATING WOOD.



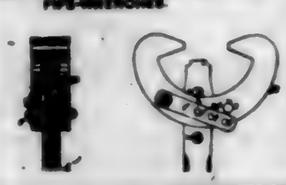
111,416 JOHN W. WOOD.
GABRIEL MOORE
CORN AND PHOSPHATE-DRILLS.

111,417. HORACE WYMAN.
BOX-OPERATING MECHANISMS FOR LOOMS.

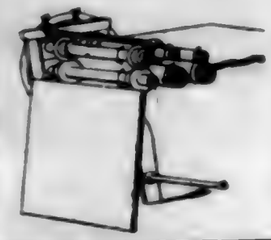
111,418. THOMAS ARNOLD.
TUBE-HOLDERS.



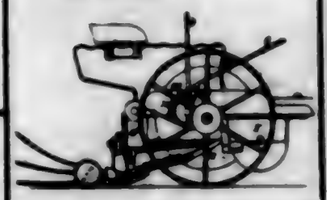
111,419. DAVID H. BALL.
CAR-COUPLINGS.



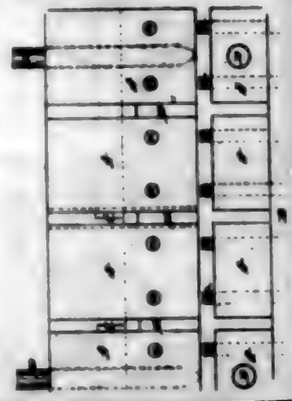
111,420. JAMES BALL.
ENVELOPE-MACHINES.



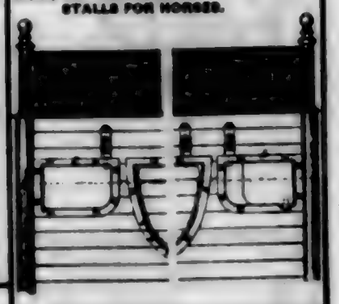
111,421. TURNER BARR, HUGH A. JAMISON. GRAIN-DRILLS.



111,422. CHANEL GRAVES BARRETT.
PIPE-MOUTHPIECES.



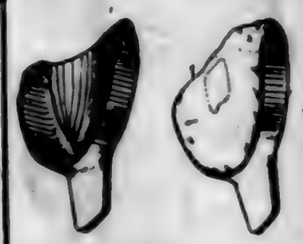
111,423. GEORGE BATES.
PAPER-CUTTING MACHINES.



111,424. L. M. BATTY.
HARVESTERS.

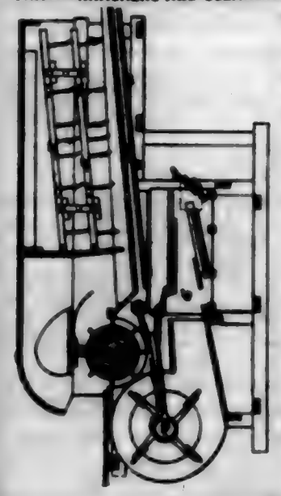
111,425. W. M. BEDDLER.
WOOD PA. PUMPS.

111,426. SAMUEL S. BENT.
STALLS FOR HORSES.



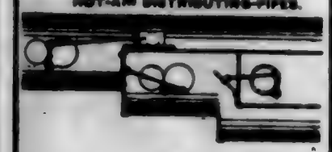
111,427. SAML. BLUE.
COOKING-STOVES.

111,428. JOEL L. BOND.
COMBINED GANG AND SUBSOIL-PLOWS.

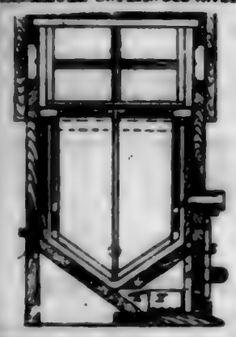


111,429 MARY A. BOUGHTON.
MODES OF FORMING THE AIR-CHAMBER IN DENTAL-PLATES.

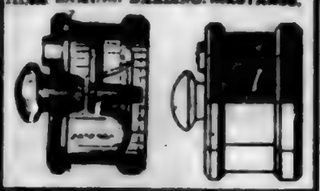
111,430. NATHANIEL T. BRADLEY.
CUPS FOR KEROSENE-LAMPS.



111,431. WILLIAM H. BUTTERWORTH.
JOHN BUTTERWORTH, Jr.
GRAIN-THRASHERS AND CLEANERS.

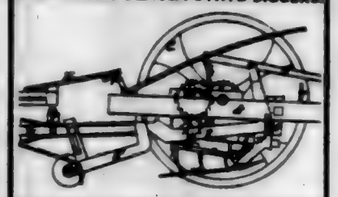


111,432. JARVIS CASE, CULTIVATORS.

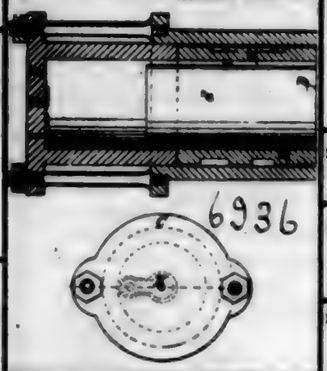


111,433. HORACE C. CEBROSE.
HOT-AIR DISTRIBUTING-PIPES.

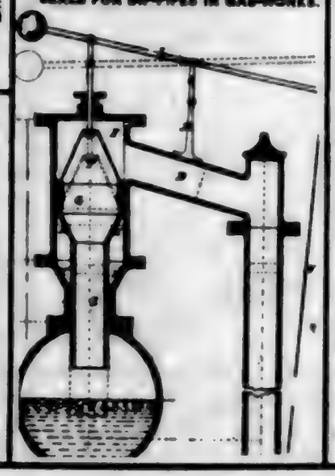
111,434. SAMUEL CUPLIN, BEE-HIVES.



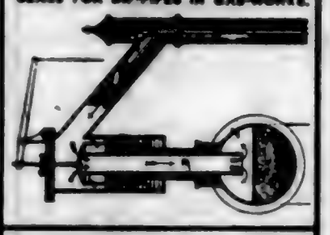
111,435. SAMUEL DARLING, MEASURING-STAMPS.



111,436. ARMISTEAD M. DARRELL.
BRANDING-STAMPS.

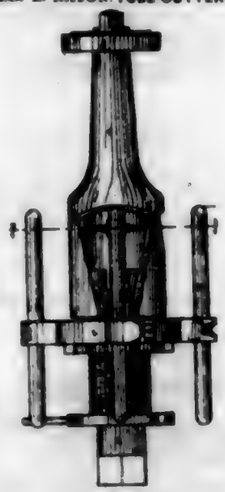


111,437. JAMES DAVIS, POTATO-DIGGERS.



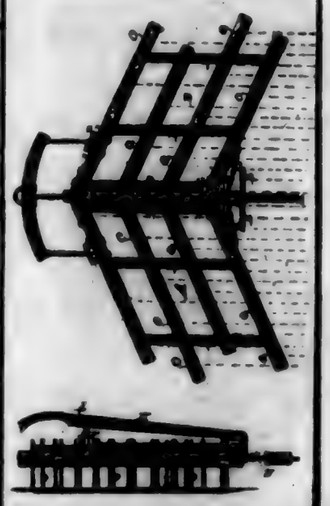
111,438. PATRICK S. DEVLAN.
COMBINED PNEUMATIC AND RUBBER SPRINGS.

111,439. GRAFTON DOUTY.
SEALS FOR DIP-PIPES IN GAS-WORKS.



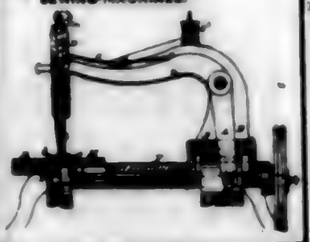
111,440. GRAFTON DOUTY.
SEALS FOR DIP-PIPES IN GAS-WORKS.

111,441. ELISHA DYER, Jr.
LUBRICATING-COMPOUNDS.



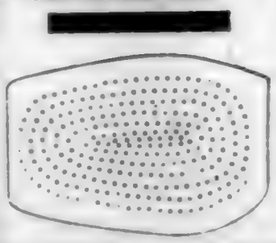
111,442. D. E. EATON, TUBE-CUTTERS.

111,443. JOHN F. FALLIS.
COMPOUNDS FOR DRESSING AND COLORING THE HAIR.



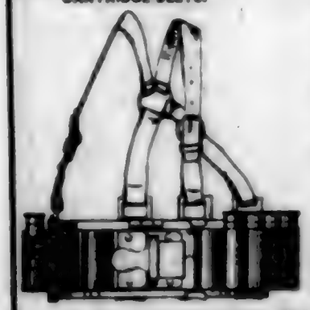
111,444. RASSELAS [illegible] X FARLEY.
TREATING COTTON-SEED OIL TO RENDER IT DRYING.

111,445. AUGUST FRIEDMANN.
HARROWS.



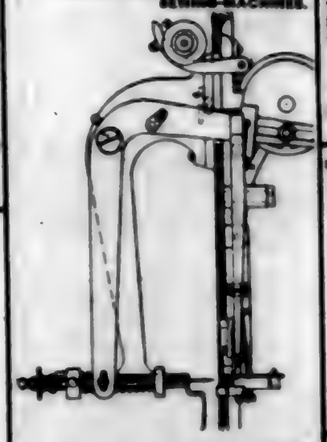
111,446. GEORGE B. GARNAR, TEMPERING STEEL.

111,447. THOMAS GARRICK. SEWING-MACHINES.



111,448. BENJ. D. GODFREY. BOOT-AND-SHOE SOLES.

111,449. JOHN GREACEN, Jr. EDWARD L. PERRY. RUBBER ROLLS.



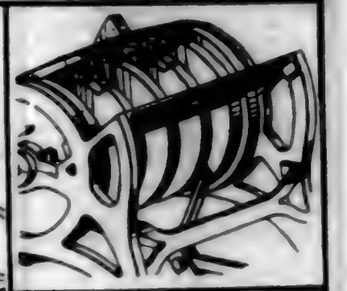
111,450 WILLIAM R. HAYDEN. CARTRIDGE-BELTS.

111,451. JOHN H. HENDRICK. BEE-HIVES.

111,452. W. B. HIGGINS. FEEDING MECHANISMS FOR SEWING-MACHINES.

111,453. MASON HIRSH. LEOPOLD HIRSH. UMBRELLAS.

111,454. ISAAC C. McDONALD. JAS. HOAGLAND. MANUFACTURE OF SOAP.

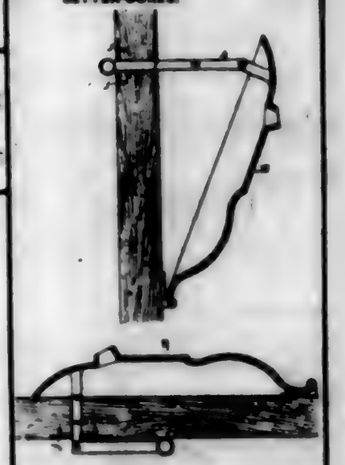


111,455. P. M. HOLMES. FOLDING-CHAIRS.

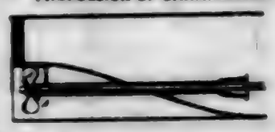
111,456. WM. J. HORSTMANN. FASTENINGS FOR EPAULETTES.

111,457. A. J. HOWELL. JAMES MURPHY. MACHINES FOR CUTTING STAVES.

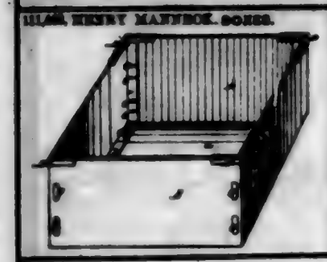
111,458. ALLEN JOHNSTON. WILLIAM T. JOHNSTON. GATHERING ATTACHMENTS FOR SEWING-MACHINES.



111,459. CHARLES T. KEMMER. COATING AND DECORATING WALLS, CEILINGS, &c.

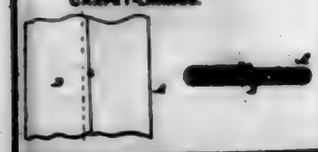


111,460. AMOS KENNARD. CANT-HOOKS.

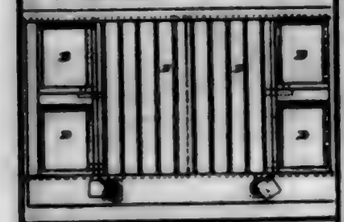


111,461. CYRUS LEVIS. LETTER-BOXES.

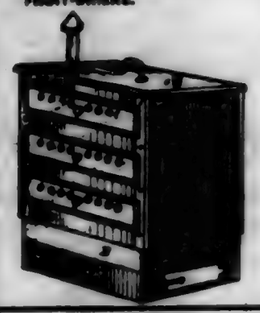
111,462. THOMAS MAIN. PROPULSION OF CANAL-BOATS.



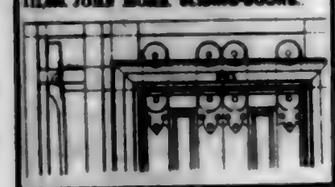
111,463. HENRY MANYBOE. SOLES.



111,464. HIRA P. MARBLE. BROOMS.

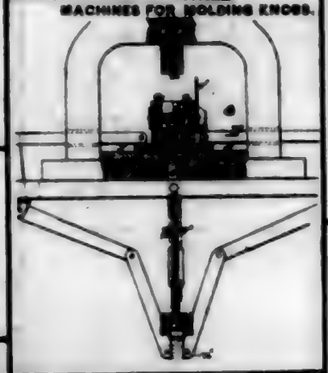


111,465. JOHN G. MAYALL. CARPET-LININGS.

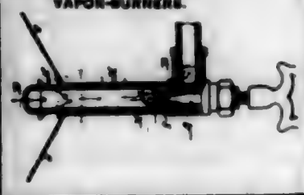


111,466. JOHN ARMSTRONG McAFULTY. BEE-HIVES.

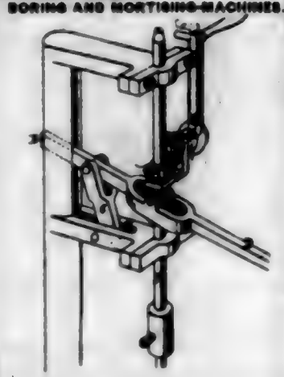
111,467. JOHN V. B. MILLER. FRUIT-DRIERS.



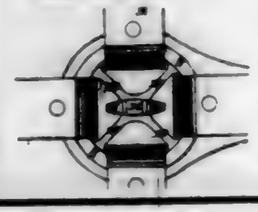
111,468. JOHN MORR. BLIND-DOORS.



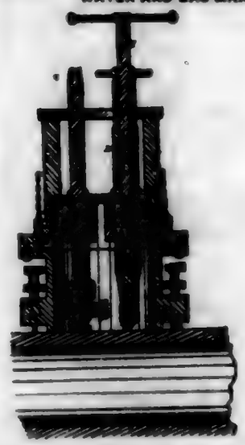
111,469. SAMUEL C. MYERS. JAMES McCAULEY. CORRUGATED SAND-CUTTERS AND FEEDERS FOR THRASHING-MACHINES.



111,470. CHARLES H. PALMER. MACHINES FOR MOLDING KNOBS.



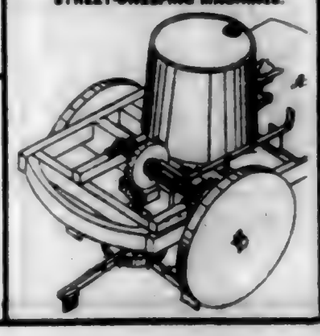
111,471. ROBERT W. PARK. VAPOR-BURNERS.



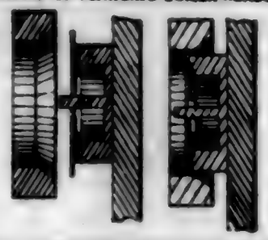
111,472. JACOB PETERS. BORING AND MORTISING-MACHINES.

111,473. ROBERT PORTER. TRACE-CARRIERS.

111,474. JAMES RILEY. PATRICK RILEY. MACHINES FOR DRILLING AND TAPPING WATER AND GAS-MAINS.

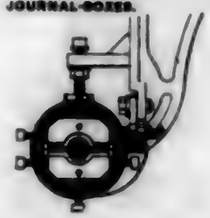


111,475. JACOB C. ROBIE. FLUTING-TONGS.

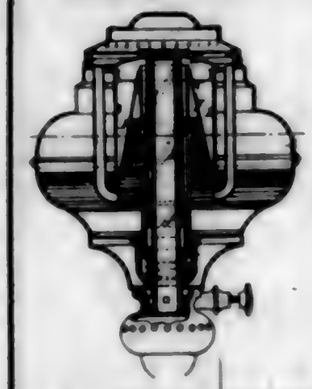


111,476. EVEN RØNNING. APPARATUS FOR PRESERVING MILK.

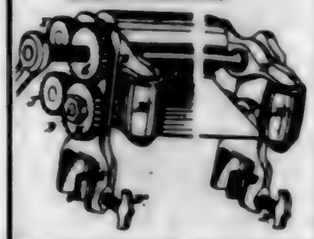
111,477. E. A. O. ROULSTONE. STREET-SWEEPING MACHINES.



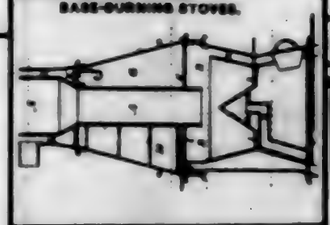
111,478. W. B. SOAPE.
METHODS OF FLANGING BOILER-HEADS.



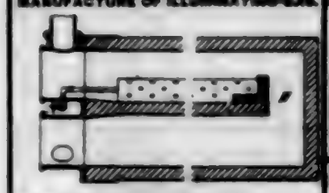
111,479. JOHN SCHRODER.
JOURNAL-BOXES.



111,480. JOHN J. SCHILLINGER.
CONCRETE BLOCKS FOR PAVING.

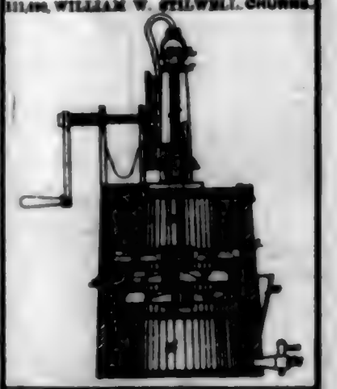


111,481. H. A. SCHOTTKY.
THEODORE SIMENDINGER.
LAMPS.



111,482. ALBERT H. SPENCER.
WRINGING-MACHINES.

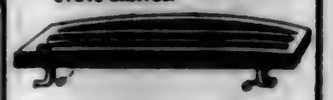
111,483. STEPHEN SPOOR.
BASE-BURNING STOVES.



111,484. IRA H. STANLEY.
MANUFACTURE OF ILLUMINATING-GAS.

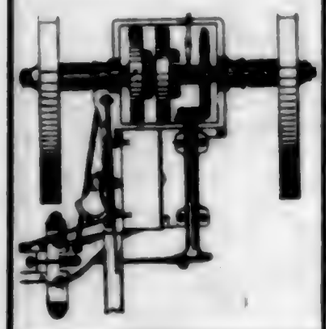
111,485. GEORGE D. STEVENS.
GUARD-CHAINS FOR BRACELETS.

111,486. WILLIAM W. STILWELL. CHURNS.



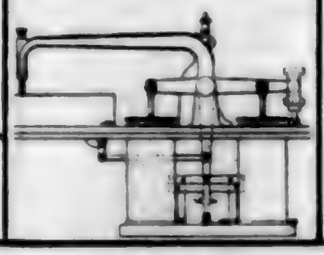
111,487. CHAUNCEY THOMAS.
CARRIAGE-SEATS.

111,488. CHAUNCEY THOMAS. VEHICLES.



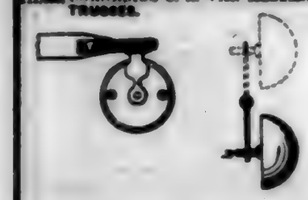
111,489. WILLIAM S. THOMAS.
STOVE-GRATES.

111,490. OYRUS TUCKER.
CHAIRS.

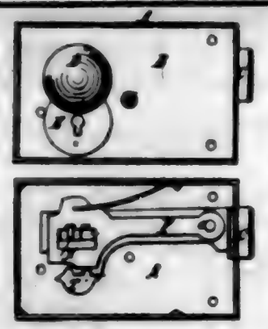


111,491. JACOB W. SCHUCKERS.
HARVESTERS.

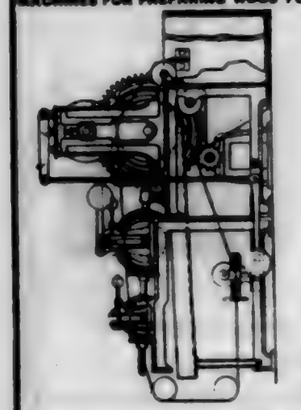
111,492. WILLIAM H. SEYMOUR.
HARVESTER-REELS AND RAKES.



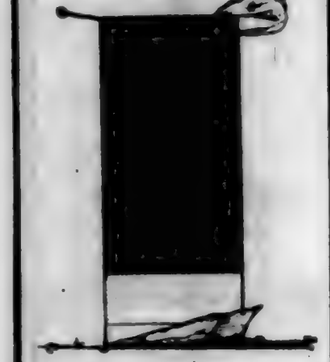
111,493. GEORGE STEVENS.
JOSHUA HENDY.
ELECTRO-MAGNETIC SEWING-MACHINES.

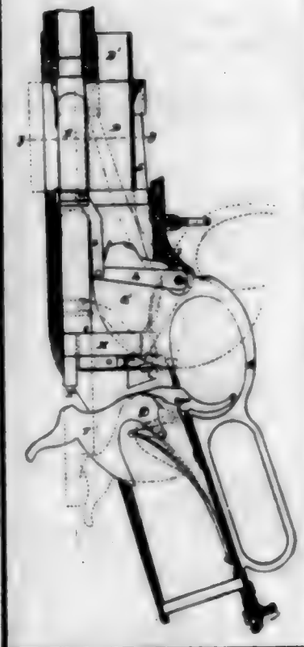


111,494. CHARLES STARR. UMBRELLAS.

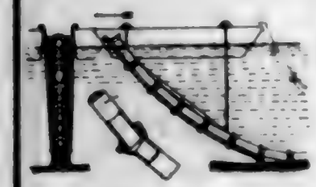


111,495. CORNELIUS C. K. VAN ALSTINE.
TRUSSES.



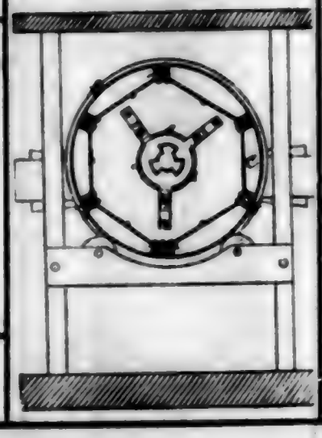


111,496. N. WAINWIX.
ALONZ WAINWIX.
CARL A. SPECKER.
MACHINES FOR PREPARING WOOD PULP.

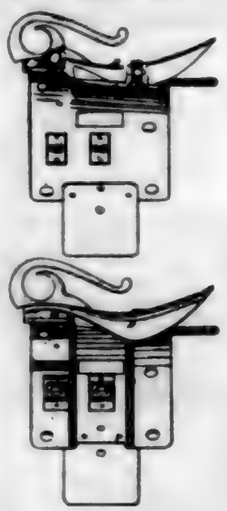


111,497. AMASA K. WALKER.
FLY-EXTERMINATORS.

111,498. LUKE WHEELOCK.
REPEATING FIRE-ARMS.

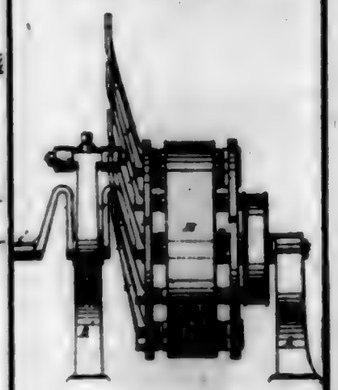


111,499. JOHN F. WARD.
MODES OF LAYING PIPES ACROSS RIVERS.

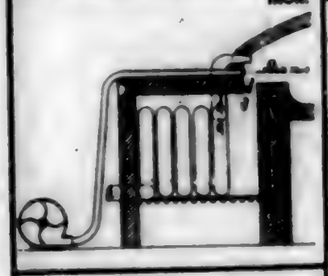


111,500. JOHN WELSH.
DOOR-LOCKS.

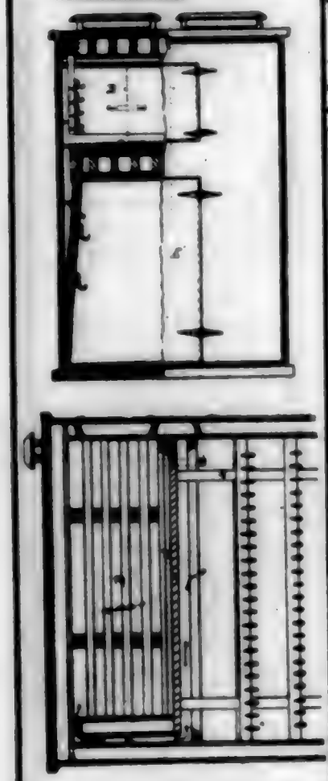
111,501. BENJAMIN CLAYTON WHITE.
BOLT-REELS.



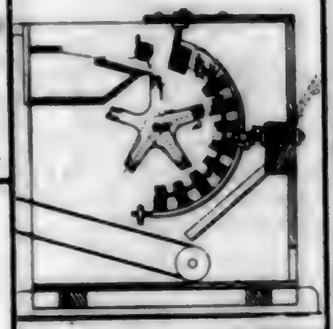
111,502. PH. H. WIEDERSUM.
HARNESS SADDLE-TREES.



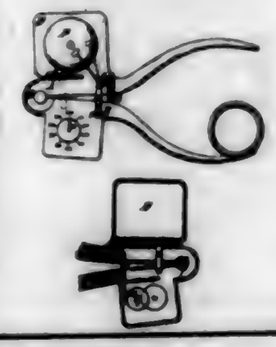
111,503. JACOB WOOLF.
MECHANICAL MOVEMENTS.



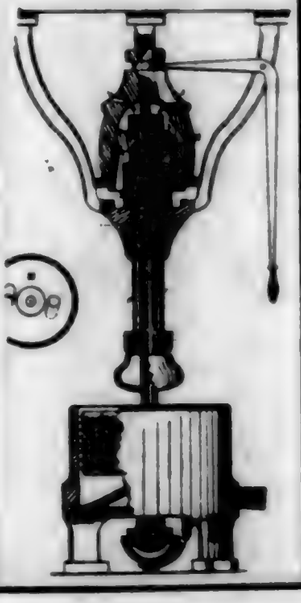
111,504. JAMES D. WHELPLEY.
JACOB J. STOBER.
MANUFACTURE OF STEEL, STEELY IRON, AND HOMOGENEOUS OR CRYSTALLINE IRON.



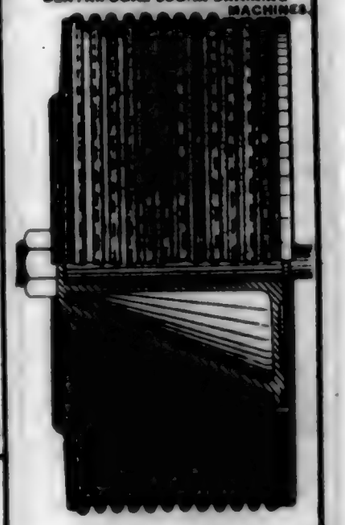
4,252. JOSEPH HYDE FISHER.
REFRIGERATORS.



4,253. JAMES B. FORSYTH.
MANUFACTURE OF INDIA-RUBBER ROLLERS.

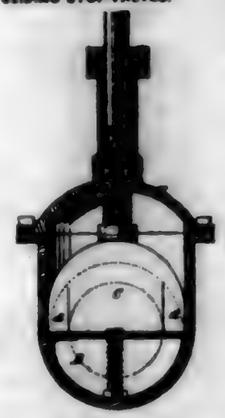


4,254. HUGH HANNA.
THRASHING-MACHINES.



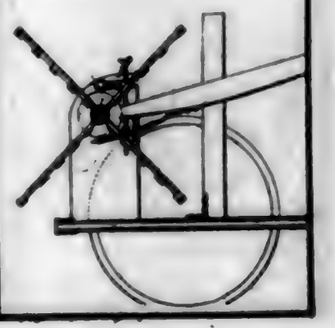
4,255. AUSTIN D. HOFFMAN.
REGISTERING TICKET-PUNCHES.

4,256. H. W. LAFFERTY.
ROBERT LAFFERTY.
CENTRIFUGAL SUGAR-GRAINING MACHINES.



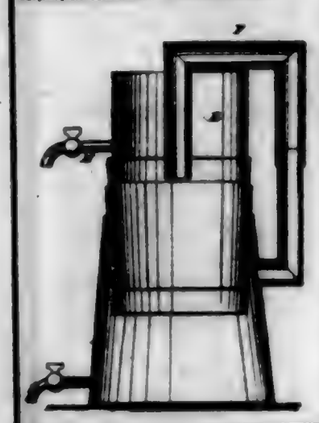
4,257. HUGH W. LAFFERTY.
ROBERT LAFFERTY.
CENTRIFUGAL SUGAR-DRAINING MACHINES.

4,258. MARTIN LANDENBERGER.
DESIGN FOR A SHAWL.



4,259. HENRY G. LUDLOW, 2d.
SLIDING STOP-VALVES.

4,260. JAMES B. FORSYTH.
RUBBER ROLLS FOR CLOTHES-WRINGERS.



4,261. HENRY WATERMAN.
HARVESTERS.

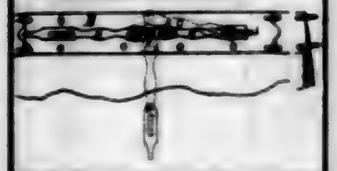
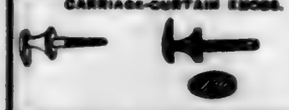
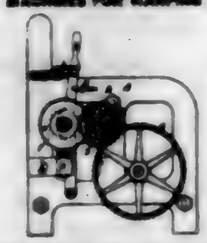
111,517. JOHN R. CROWLEY.
ADDIE B. CHAMBERLAIN.
COOKING-STOVES.



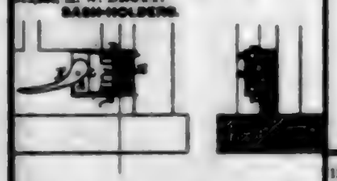
111,518. WILLIAM DALZIEL.
SELF-CLOSING COCKS.



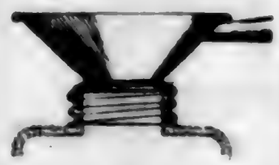
111,540 ALFRED DAY, CLOTHES-DRIERS.



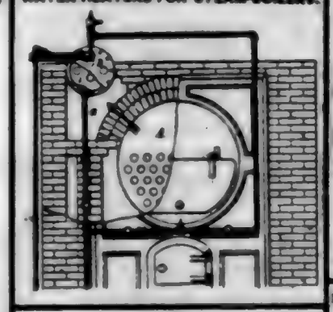
111,541 D. FRANKLIN DODGE.
GAS-GAS FASTENINGS.



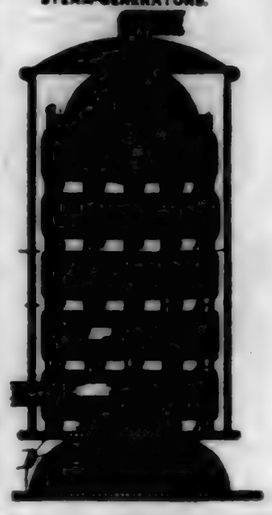
111,542 W. B. DOUGLASS
CARRIAGE-CURTAIN KNOBS.



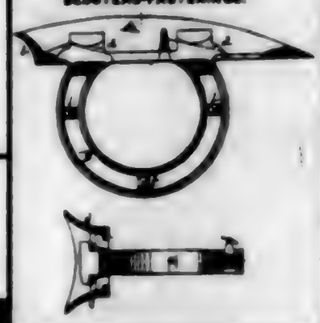
111,543 GEORGE DRAPER.
MACHINES FOR HANDLING YARN.



111,544 H. W. DROTT.
SASH-HOLDERS.



111,545 LESTER P. EDWARDS.
FUNNELS.

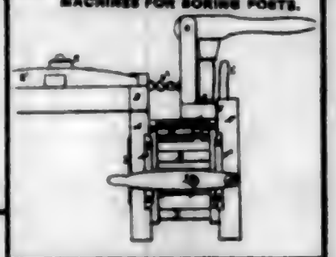


111,546 DAVID C. G. FIELD.
WATER-HEATERS FOR STEAM-BOILERS.

111,547 LOYAL C. FIELD.
STEAM-GENERATORS.

111,548 SEBASTIAN GOETZ.
SEDSTEAD-FASTENINGS.

111,549 FRANCIS J. GOLDSMITH.
INVERTIBLE TROUGHS.

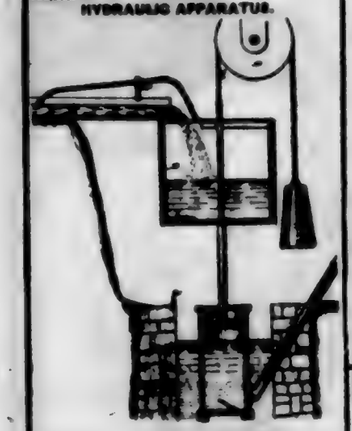


111,550 MYRON GORE.
FEED-GARNICERS.

111,551 FRANKLIN T. GRIMES. LAMPS

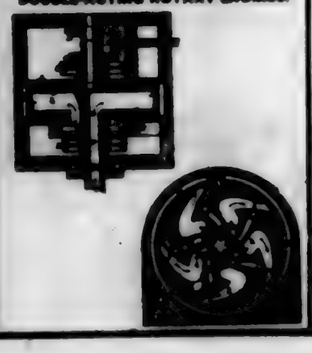
111,552 JESSE R. GROUP.
MACHINES FOR BORING POSTS.

111,553 EMERY B. HARDY.
NAPOLEON DUBEUL.
LEATHER-PUNCHING AND CUTTING-MACHINES.

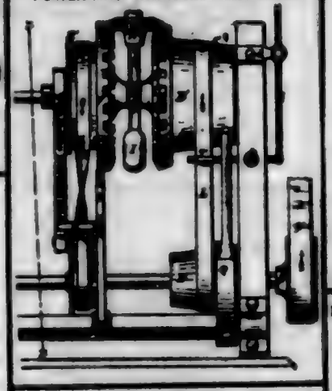


111,554 GILBERT H. HARRINGTON.
CARTRIDGE-SHELL EJECTORS FOR REVOLVING FIRE-ARMS.

111,555 HENRY F. HERKNER.
JARED W. POST.
WATER-PROOF PIANO-COVERS.

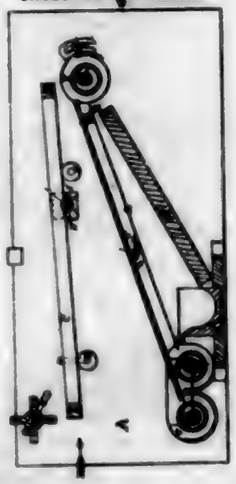


111,556 OEO. H. HERRICK.
HYDRAULIC APPARATUS.



111,557 HENRICH HERRMANN.
ASIAN CHIMING-BELLS.

111,558 JAMES P. HERRON.
DOUBLE-ACTING ROTARY ENGINES.



111,559 SPENCER HIATT.
APPARATUS FOR TRANSMITTING POWER AND CHANGING THE SPEED.

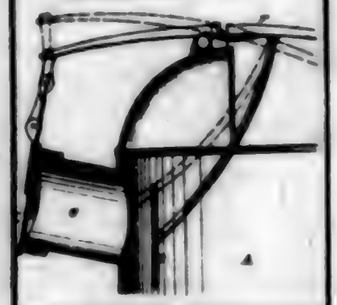
111,560 SAMUEL HOLLABAUGH.
THOMAS W. LETTS.
SCAFFOLDS.

111,561 D. W. HOLLIHAN.
SHOES FOR THRASHERS.

111,562 CHS. HOUGHTON.
AUTOMATIC STEAM WATER-ELEVATORS.

111,563 WESCOM HUDGIN, M. D.
WHEELS AND AXLES FOR RAILWAY-CARS.

111,564 JOHN W. HULL.
ALBERT G. STIFFLER.
CLOVER-HARVESTERS.



111,565 CURTIS HUNTLEY.
FLOUR-SIFTERS.

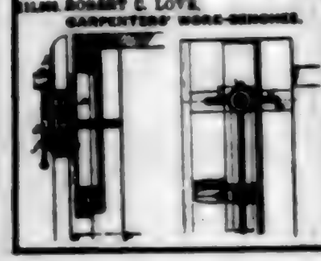
111,566 E. A. INGLEFIELD.
STEERING APPARATUS.

111,547 JAMES IVES.
MODES OF FASTENING HUB-BANDS, &c.

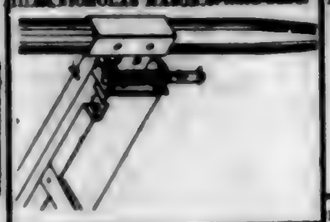
111,548. EDWIN A. JEFFERY.
BATTER-POTS.

111,549. H. W. JOHNS.
MANUFACTURE OF RUBBER FLOOR-CLOTHS, &c.

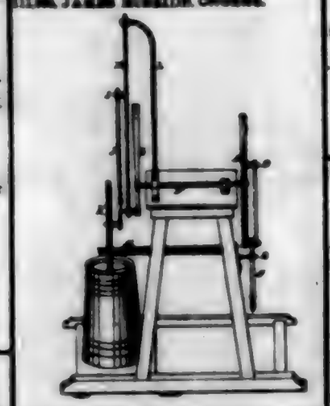
111,550 WILLIAM KEAN.
COUPLINGS FOR SHAFTS FOR MILLS.



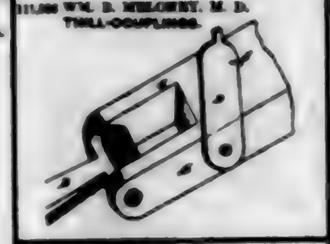
111,551. EDWARD G. KRAESING.
LEONHD KRAESING.
PREPARATION OF PLATINUM FOR FILLING TEETH.



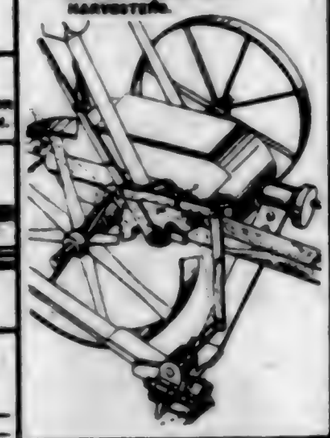
111,552. THOMAS LA BLANC.
BOILER-TUBE PLUGS.



111,553. ROBERT C. LOVE.
CARPENTERS' WORK-BENCHES.

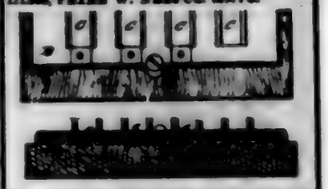


111,554 NICHOLAS MAGEE.SPRING-BEDS.

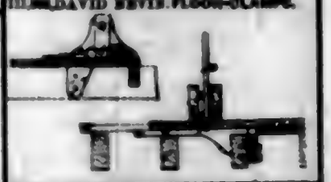


111,555. JAMES McBRIDE. CHURNS.

111,556 WM. D. MELCHEY, M. D.
THILL-COUPLINGS.

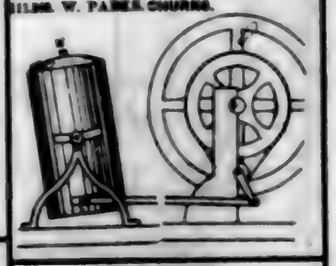


111,557 JAMES MURAY.
CASPER D. WALLACE.
HARVESTERS.



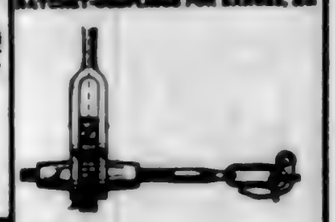
111,558. EDMUND A. MYERS.
TONGUES FOR CHILDREN'S CARRIAGES.

111,559. PETER W. PERFUS. HATS.



111,560.DAVID REVIS. FLOOR-CLAMPS.

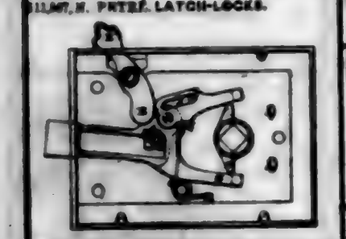
111,561.JOHN H. OBSTER.
INVALID-BEDSTEADS.



111,562. W. PARKS. CHURNS.

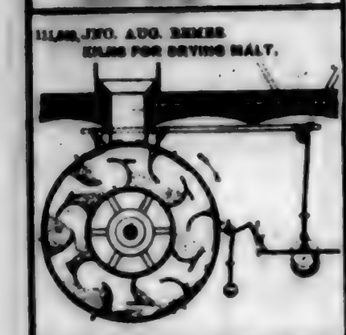
111,563. ASAHEL H. PATCH.
CLOTHES-DRIERS.

111,564. WILLIAM W. PATTERSON
EDMUND BISHOP.
RATCHET-COUPLINGS FOR HARROWS, &c.

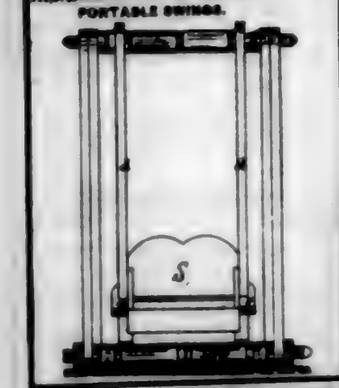


111,565. E. P. PERRY.
ARTIFICIAL FUEL.

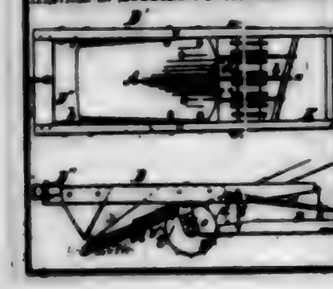
111,566. ALBERT D. PERRY.
FOUNTAIN BLACKING-BRUSHES.



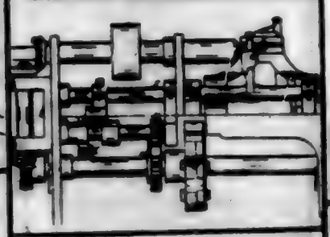
111,567. H. PETRY. LATCH-LOCKS.



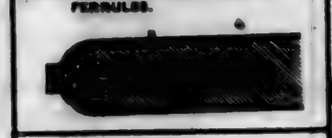
111,568. ALVIN DAVIS PUFFER.
WINES-GRUPO AND BEVERAGES.



111,569. JNO. ADG. REMER.
RING FOR SERVING SALT.

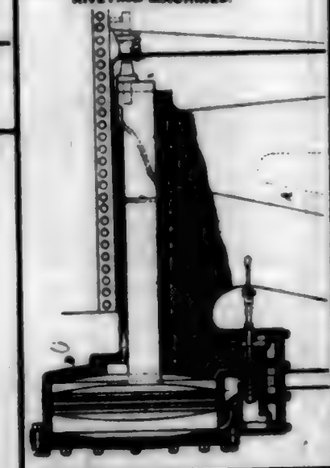


111,570.DANIEL M. REYNOLDS.
PORTABLE SWINGS.



111,571.B. B. ROBBINS POTATO-DIGGERS.

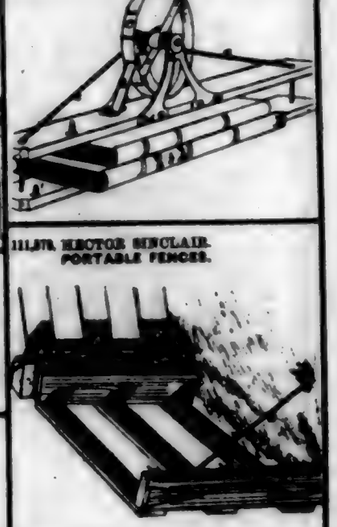
111,572. DAVID W. ROBERTSON.
JABOT A. EDWARDS.
MACHINES FOR THREADING SCREWS.



111,573. WILLIAM HENRY RODDEN.
FERRULES.

111,574. LEWIS S. ROWE.
THILL-COUPLINGS.

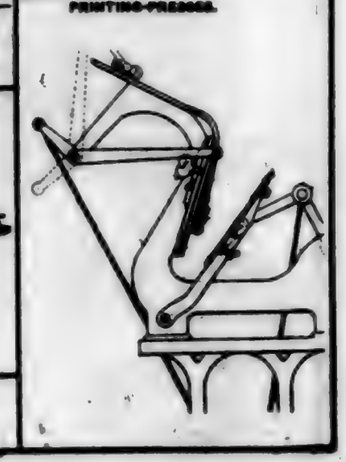
111,575. WM. SELLERS.
RIVETING-MACHINES.



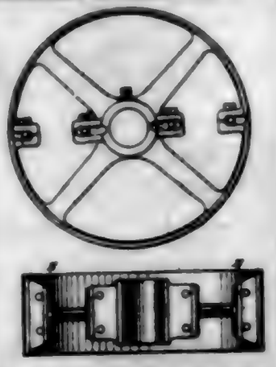
111,576. JAMES T. SHELDON.
FEATHER-RENOVATORS.

111,577.CALVIN W. SHERWOOD.
PORTABLE SOCK-HOLDERS.

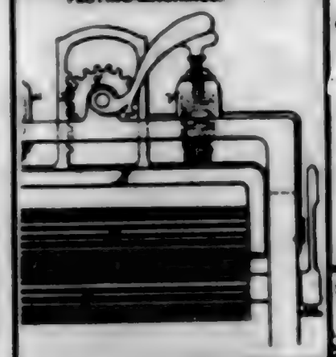
111,578. HECTOR SINCLAIR.
PORTABLE FENCES.



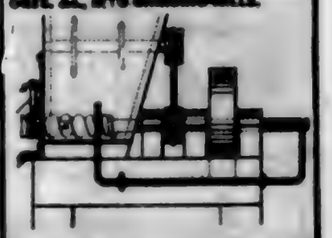
111,579. JASPER H. SINGER.
PAPER FOR USE IN THE BOTTOMS OF BIRD-CAGES.



111,580. L. G. SKINNER.
BOILER-FURNACES.

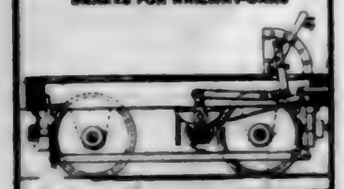


111,581. EARLE H. SMITH.
PRINTING-PRESSES.



111,582. SCOTT A. SMITH. PULLEYS.

111,583. THEODORE M. TUCKER. FLUTING-MACHINES.



111,584. JAMES D. WHELPLEY. JACOB J. STORM. APPARATUS FOR DELIVERING GRAIN, ORES, &c., INTO GRINDING-MILLS.

111,585. WILLIAM C. STOUT. TANNING.

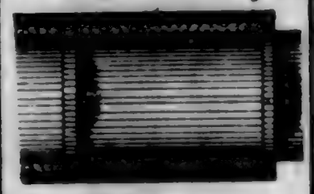
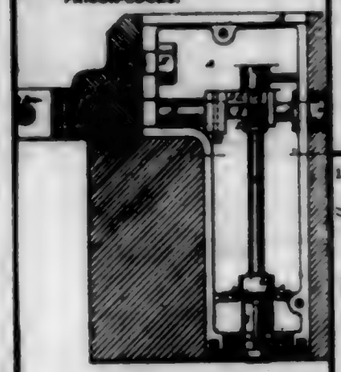
111,587. W. TWITCHELL. STOVE-DRUMS.

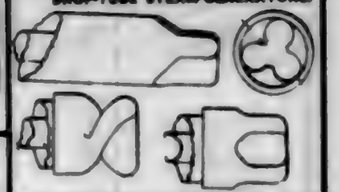


111,588. HENRY A. WHITTEN. ELIJAH D. GOVE. LOOM-PICKING MOTIONS.

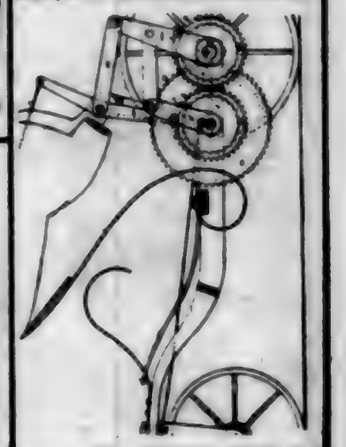


111,589. WESTLY TODD. WASH-BOARDS.

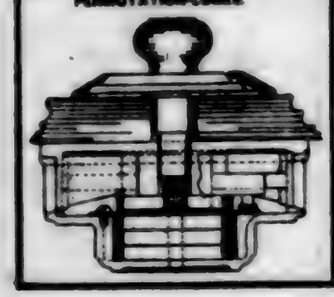
111,590. STEPHEN UPTON. LUBRICATORS FOR LOOSE PULLEYS.



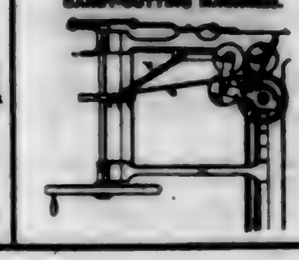
111,591. HENRY B. TOWER. PRISON-LOCKS.



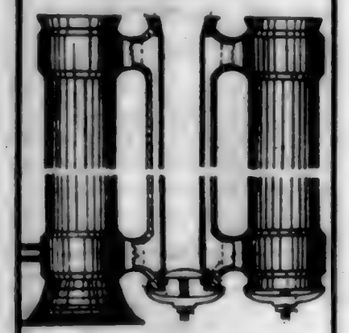
111,592. JOHN R. WEAVER. RAILWAY-CAR BRAKES.



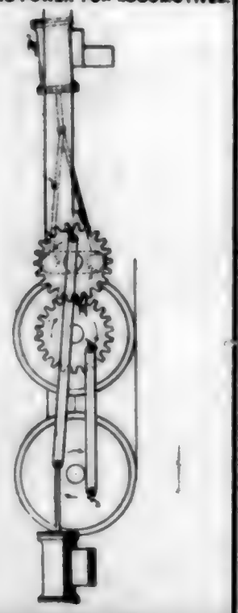
111,593. C. LLOYD WIEGAND. DROP-TUBE STEAM-GENERATORS.



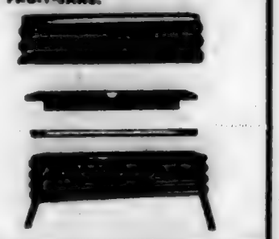
111,594. W. L. WILLIAMS. VELOCIPEDES.



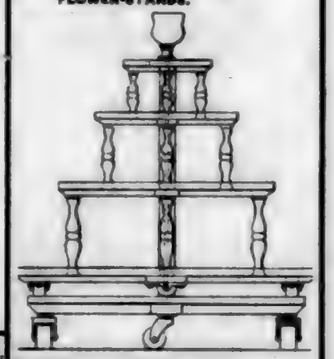
111,595. HENRY B. TOWER. PERMUTATION-LOCKS.



111,596. CHRISTOPHER WERTZ. ALBERT GREEN. ORLANDO P. COWDEN. CANDY-CUTTING MACHINES.

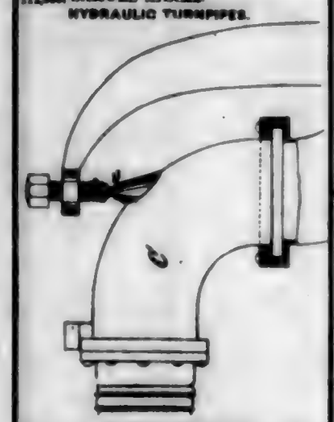


111,598. JOSEPH L. WINSLOW. STEAM-HEATERS.

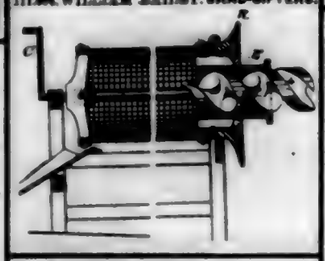


111,599. WILLIAM D. ARNETT. DRIVING-POWER FOR LOCOMOTIVES.

111,600. MELVILLE R. MERRILL. FRUIT-JARS.

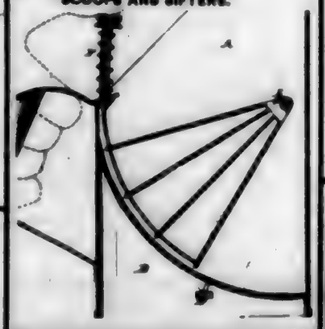


111,601. ELIJAH D. CANTELOW. FLOWER-STANDS.

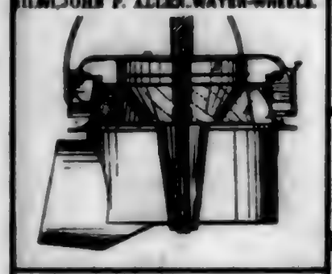


111,602. ARTHUR T. WOODWARD. VESSELS FOR HOLDING OIL.

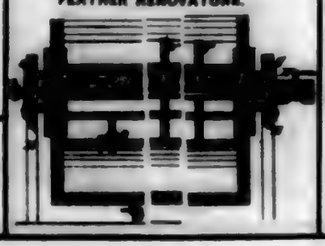
111,603. SAMUEL ADAMS. HYDRAULIC TURNPIPES.



111,604. WILLIAM BAILEY. SAND-SIFTERS.

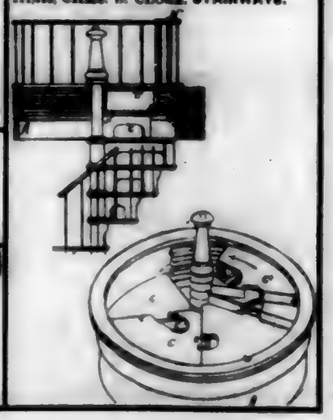


111,605. GEORGE CLARKSON. ALCOHOL-STILLS.

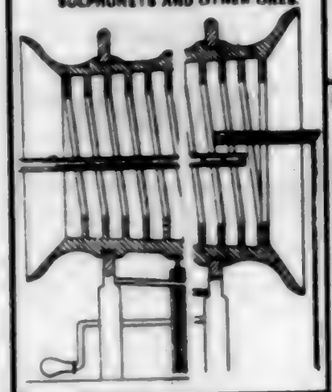


111,606. JOSEPH BAKER. SCOOPS AND SIFTERS.

111,607. JOHN P. ALLEN. WATER-WHEELS.

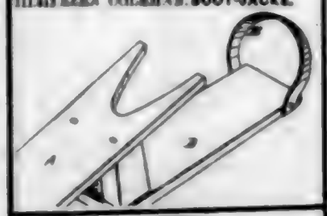


111,608. JAMES A. BELL. FEATHER RENOVATORS.

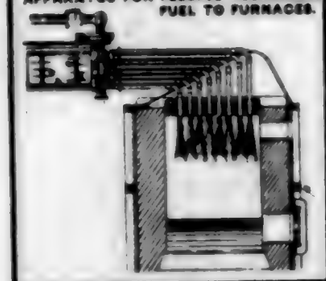


111,609. EDWARD B. ALVORD. COATING BRICK, WOOD, AND OTHER SURFACES ON WALLS, &c.

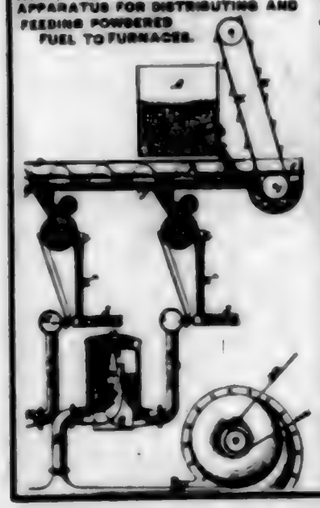
111,610. CHAS. S. CLOSE. STAIRWAYS.



111,611. JUDD M. COBB.
MANUFACTURE OF STRAW-BOARD FOR THE CONSTRUCTION OF BUILDINGS.

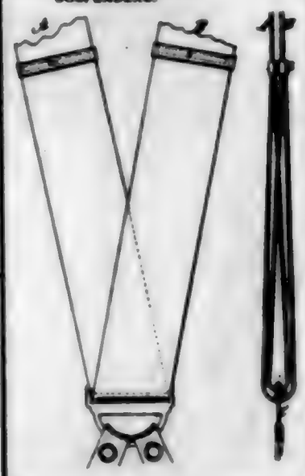


111,612. CHARLES C. COLEMAN.
APPARATUS FOR CLEANING SULPHURETS AND OTHER ORES.



111,613. EZRA COLEMAN. BOOT-JACKS.

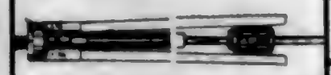
111,614. T. B. CRAMPTON.
APPARATUS FOR FEEDING PULVERIZED FUEL TO FURNACES.



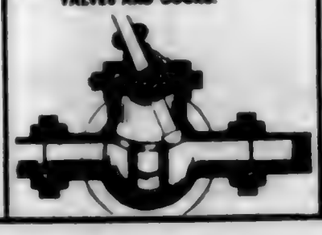
111,615. T. B. CRAMPTON.
APPARATUS FOR DISTRIBUTING AND FEEDING POWDERED FUEL TO FURNACES.

111,616. T. B. CRAMPTON.
FURNACES FOR BURNING PULVERIZED FUEL.

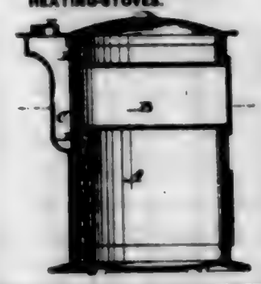
111,617. JOHN W. DAYTON.
SUSPENDERS.



111,618. JAMES W. DEVLIN
HAND-VISES.

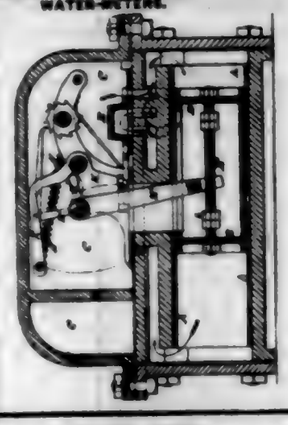


111,619. HENRY DISSTON. THOMAS OATES HILL.
SAWS.



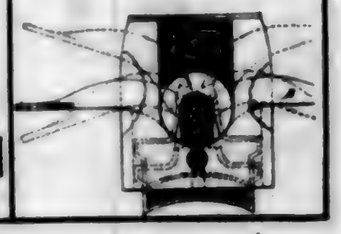
111,620. THOS. DONNELLY
DEVICES FOR ENLARGING WELLS.

111,621. ISIDORE DREYFUS.
VALVES AND COCKS.

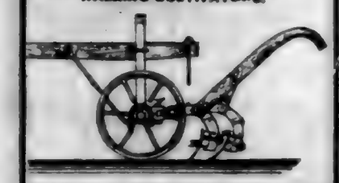


111,622. SAMUEL H. EMERY, Jr. CHAUNCEY H. CANTLE.
HEATING-STOVES.

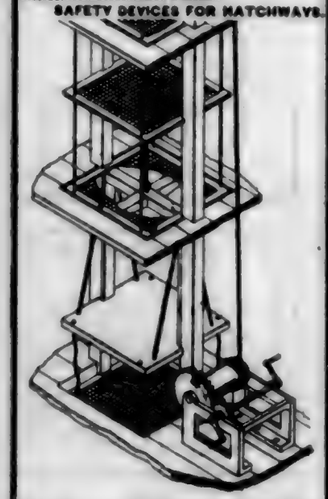
111,623. LYMAN FAY.
SIFTERS AND STRAINERS.



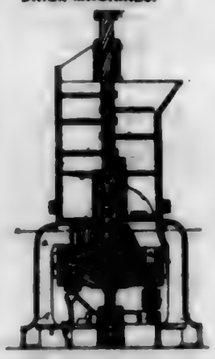
111,624. THOS. B. FOGARTY.
WATER-METERS.



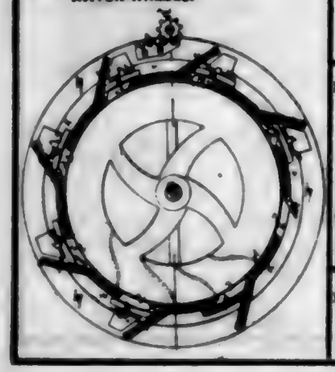
111,625. FRANKLIN D. FORD.
BOOT AND SHOE-FASTENINGS.



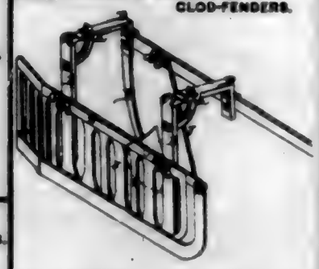
111,626. WM. FOSKET.
GATE-LATCHES.



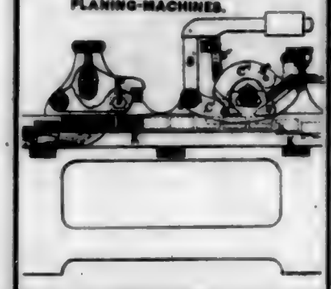
111,627. ANDREW FRIBERG.
WALKING-CULTIVATORS.



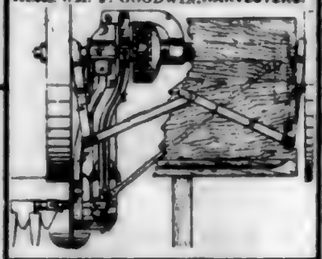
111,628. ALEXANDER FRIES.
SAFETY DEVICES FOR HATCHWAYS.



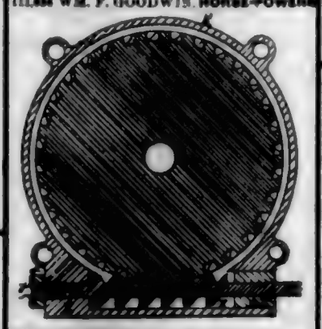
111,629. BENJAMIN M. GARD. EMERY B. GARD.
BRICK-MACHINES.



111,630. JAMES GARDNER.
WATER-WHEELS.



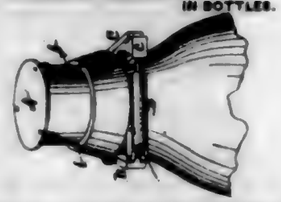
111,631. ROBERT T. GILLESPIE.
CLOD-FENDERS.



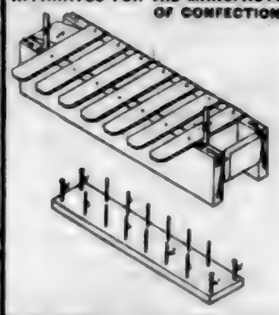
111,632. JAMES GOODRICH. HENRY J. COLBURN.
PLANING-MACHINES.

111,633. WM. F. GOODWIN, HARVESTERS.

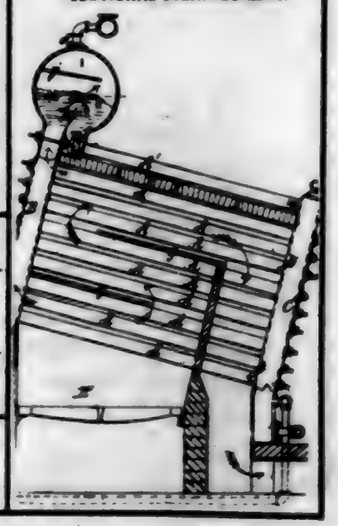
111,634. WM. F. GOODWIN, HORSE-POWERS.



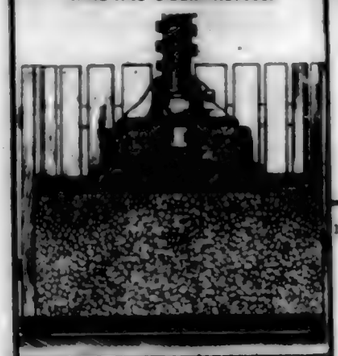
111,635. CHARLES M. GORMLY.
HAIR-PINS.



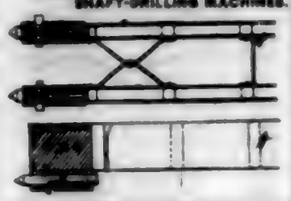
111,636. JACOB S. GOSHORN
IRON ABUTMENTS FOR BRIDGES.



111,637. SAML. L. GOUVERNEUR.
DEVICES FOR SECURING CORKS IN BOTTLES.



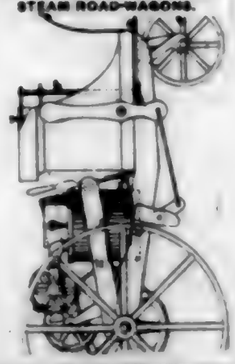
111,638. WILLIAM F. GOWARD.
APPARATUS FOR THE MANUFACTURE OF CONFECTIONERY.



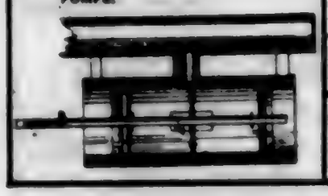
111,639. JAMES S. GRIFFITH. CHAS. E. EMERY.
SECTIONAL STEAM-BOILERS.

111,840. THOMAS W. GRINTER.
WINE AND CIDER-PRESSES.

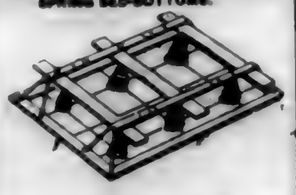
111,841. JOHN P. GRISCOM.
JOHN FRITZ.
BRIDGES FOR SUPPORTING SHAFT-DRILLING MACHINES.



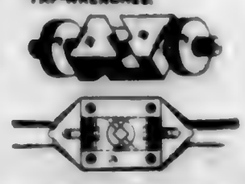
111,842. JOSEPH HAFFENEGGER.
EXPLOSIVE COMPOUNDS.



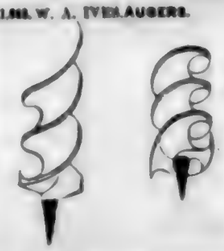
111,843. OLIVER P. HART.
CAMS FOR QUARTZ-MILLS.



111,844. CHARLES W. HERMANCE.
STEAM ROAD-WAGONS.

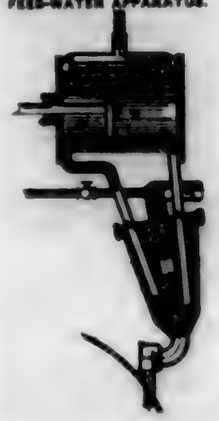


111,845. OLIVER HIGGINS.
PUMPS.

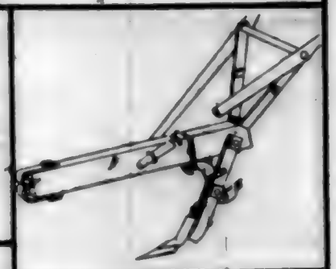


111,846. ROBERT R. HILL.
SPRING BED-BOTTOMS.

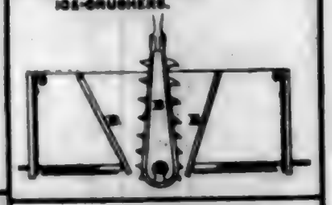
111,847. GEORGE W. HUNTOON.
EDWIN RIMONDS.
TAP-WRENCHES.



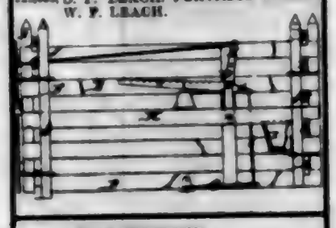
111,848. W. A. IVES.
AUGERS.



111,849. W. A. IVES.
BIT-BRACES.

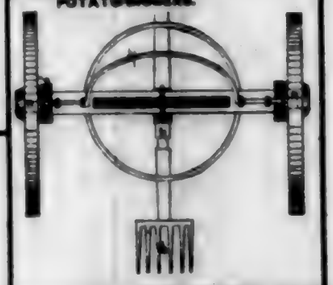


111,850. JAMES KINDEL.
FEED-WATER APPARATUS.

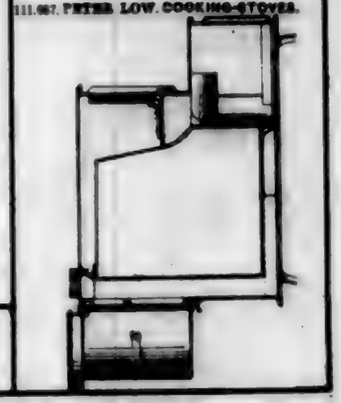


111,851. SAMPSON S. KING.
PLOWS.

111,852. OLIVER P. KIRBEY.
ICE-CRUSHERS.

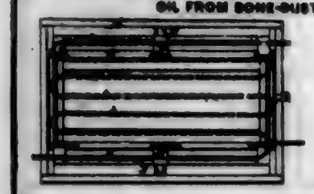


111,853. D. P. LEACH. PORTABLE STALLS.
W. P. LEACH.

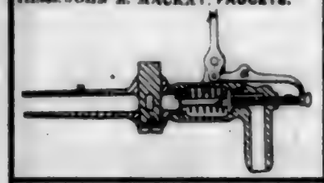


111,854. JOHN LIGHTFOOT.
DYEING AND PRINTING TEXTILE FABRICS

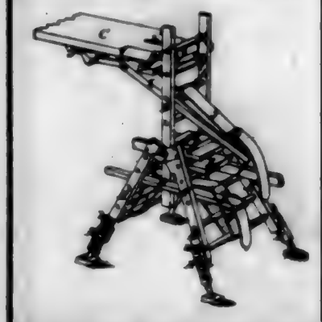
111,855. HENRY LUTER.
MEDICAL COMPOUNDS.



111,856. GEORGE C. LOVE.
POTATO-DIGGERS.

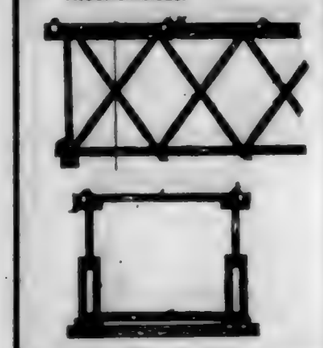


111,857. PETER LOW. COOKING-STOVES.

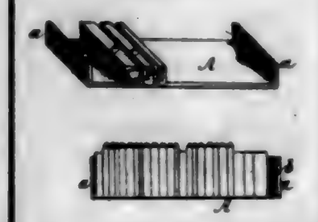


111,864. WILLIAM W. LUCAS.
APPARATUS FOR EXTRACTING OIL FROM BONE-DUST.

111,865. JOHN R. MACKAY. FAUCETS.

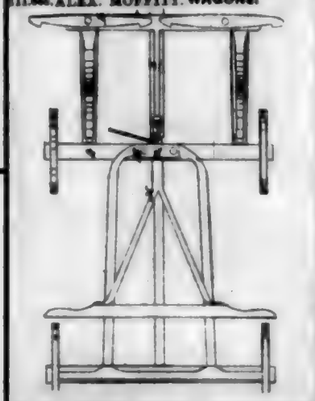


111,866. NICHOLAS MANTZ. SCAFFOLDS.

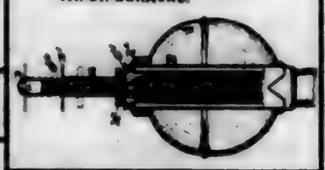


111,867. JAMES H. McCONNELL.
MANUFACTURE OF PAPER, CORDAGE, TWINE, &c.

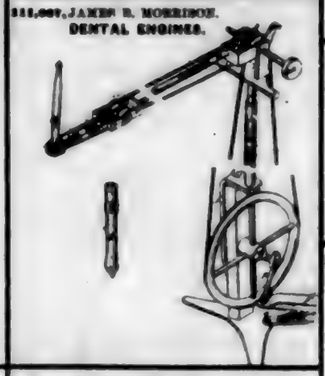
111,868. J. A. McKAY.
TRUSS-BRIDGES.



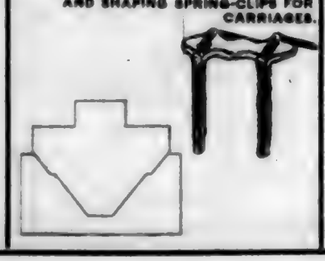
111,869. WILLIAM McNAUGHTON.
TYPE-HOLDERS.



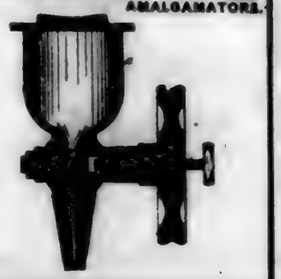
111,870. CHARLES E. MILLER.
WM. ASCOUGH.
VENT-PLUGS.



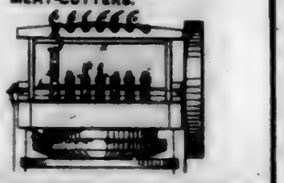
111,871. ALEX. MOFFITT. WAGONS.



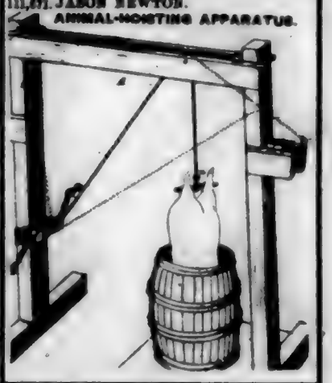
111,872. THOMAS MOORE.
JAMES O'DONALD.
VAPOR-BURNERS.



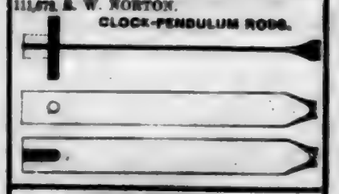
111,873. JAMES B. MORRISON.
DENTAL ENGINES.



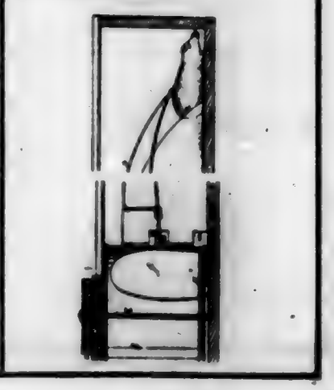
111,874. F. B. MORSE.
DIES FOR FORGING, TRIMMING, AND SHAPING SPRING-CLIPS FOR CARRIAGES.



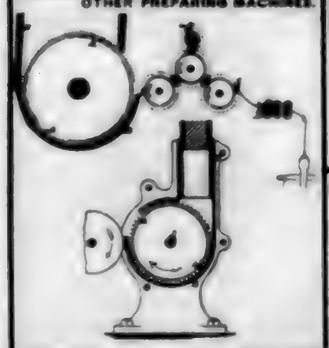
111,875. GEORGE O. MUNSON.
FEEDING QUICKSILVER TO STAMPS AND AMALGAMATORS.



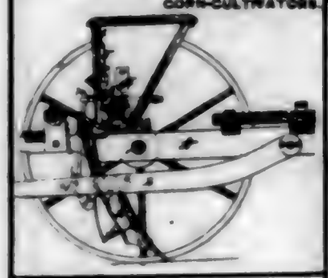
111,876. HUGH R. MURPHY.
MEAT-CUTTERS.



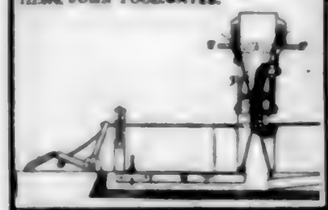
111,877. JASON NEWTON.
ANIMAL-HOISTING APPARATUS.



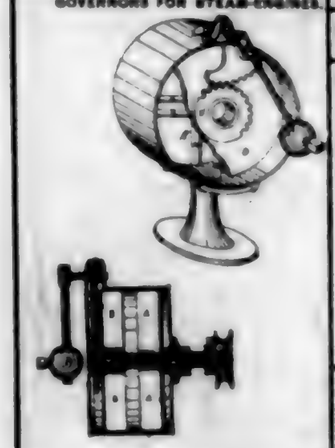
111,878. S. W. NORTON.
CLOCK-PENDULUM RODS.



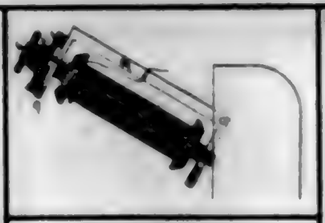
111,879. JAMES O. PARRISH.
ANIMAL-TRAPS.



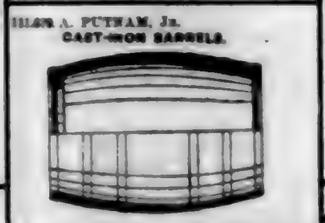
111,674 EDWIN PETTIT.
FEEDING DEVICES FOR CARDING AND OTHER PREPARING MACHINES.



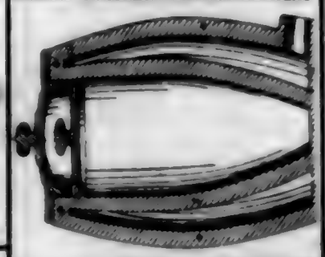
111,675 D. B. PLATT.
COMBINED GRAIN-DRILLS AND CORN-CULTIVATORS.



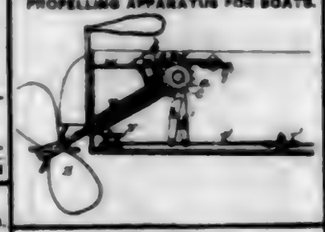
111,676 JOHN POOL-GATES.



111,677 GEORGE F. POTTER.
GOVERNORS FOR STEAM-ENGINES.

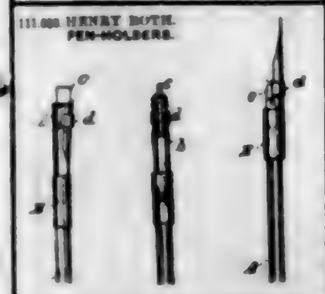


111,678 GEO. M. PRATT.
SHUTTLES FOR SEWING-MACHINES.

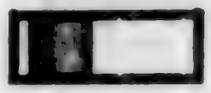


111,679 A. PUTNAM, Jr.
CAST-IRON BARRELS.

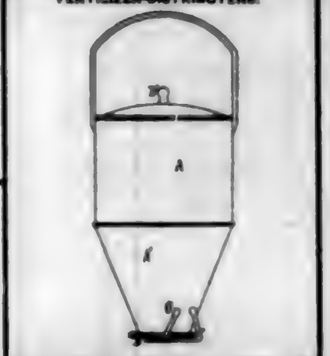
111,680 A. PUTNAM, Jr. WATER-COOLERS



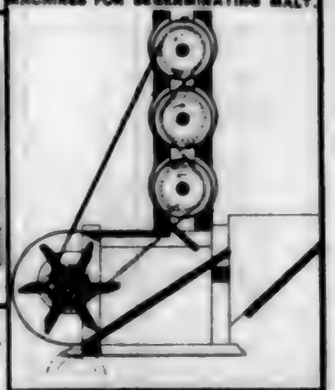
111,681 JOSEPH REPETTI.
PROPELLING APPARATUS FOR BOATS.



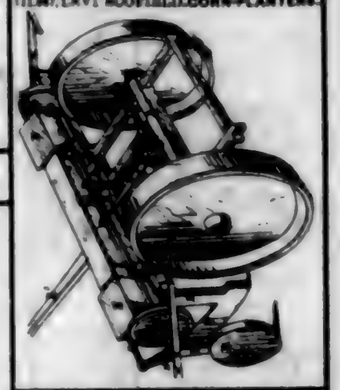
111,682 ALBERT D. RICHARDS.
MEDICATED PLASTERS.



111,683 HENRY ROTH.
PEN-HOLDERS.

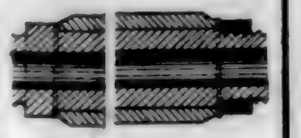


111,684 CHARLES R. RUSH.
BOXES FOR PACKING AND TRANSPORTING SHEET-METAL CANS.

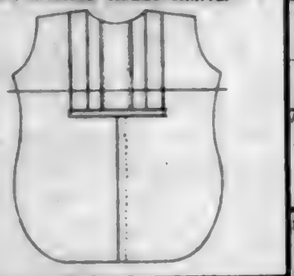


111,685 CHRISTOPHER SALVO.
FERTILIZER-DISTRIBUTERS.

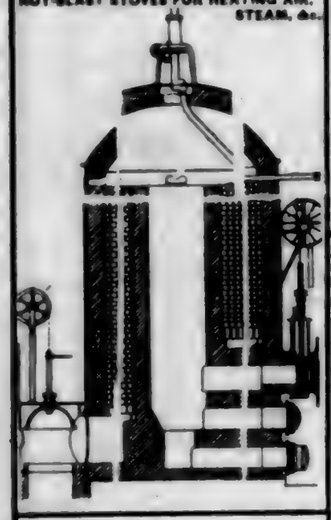
111,686 CHARLES SAUTER.
MACHINES FOR DESERMINATING MALT.



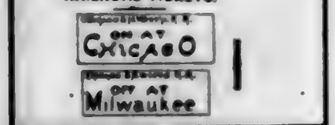
111,687 LEVI SCOFIELD.CORN-PLANTERS.



111,688 DAVID SIEYMOBOUR.
ELECTROTYPE-DIES OR MOLDS FOR MOLDING PLASTIC MATERIALS.

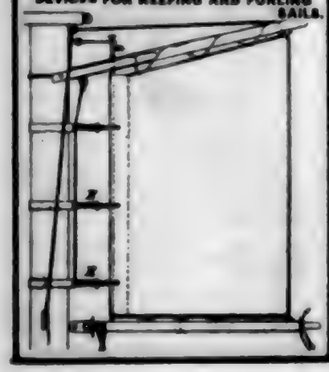


111,689 JACOB SHELLEY.
ROCK-DRILLS.

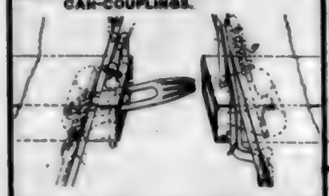


111,690 SOLOMON SIBLEY. SHIRTS.

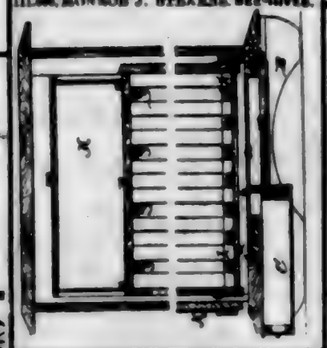
111,691 C. WILLIAM SIEMENS.
EDWARD ALFRED CowPER.
CHARLES COCHRANE.
HOT-BLAST STOVES FOR HEATING AIR, STEAM, &c.



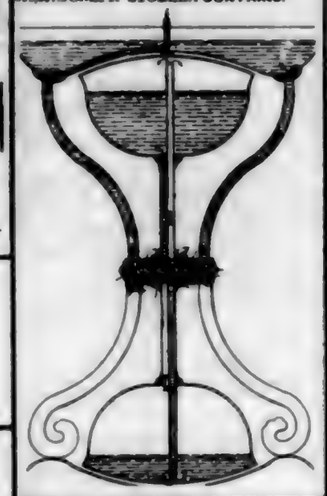
111,692 JOSEPH T. SMITH.
RAILROAD TICKETS.



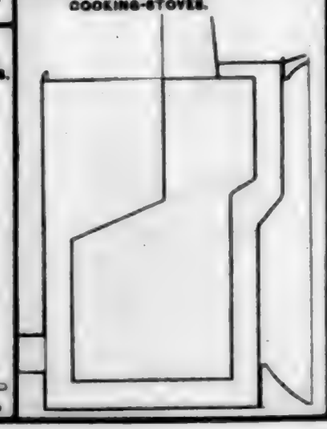
111,693 WILLIAM E. SPARKS.
SPRING-BOLTS.



111,694 WILLIAM SPRAR.
DEVICES FOR REEFING AND FURLING SAILS.



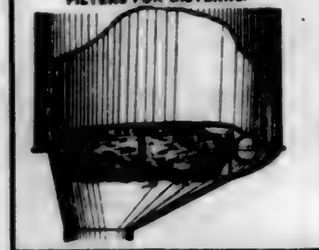
111,695 LAROY S. STARRETT.
CAM-COUPLINGS.



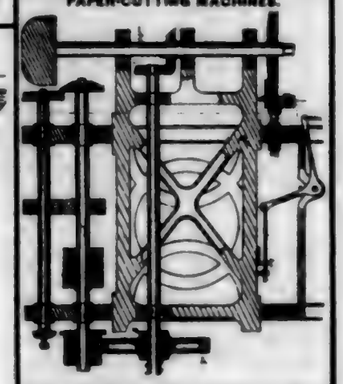
111,696 MONROE J. STEARNS. BEE-HIVES.

111,697 JOSEPH STORER. FOUNTAINS.

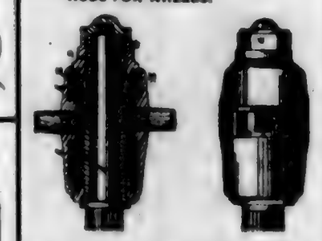
111,698 DAVID STUART.
COOKING-STOVES.



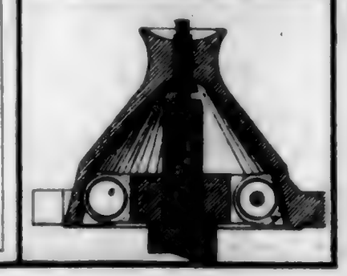
111,699 CORNELIOUS SULLIVAN.
COMBINED REMOVABLE COCKS AND FIXED SOCKETS.



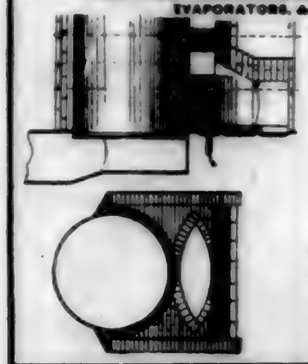
111,700 GEO. C. TAFT.
SAND OR EMERY-PAPER



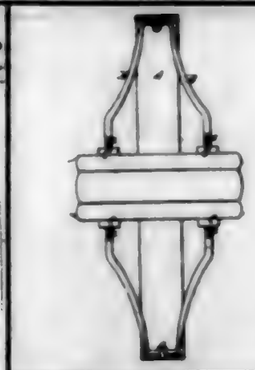
111,701 ROBT. W. THOMPSON.
FILTERS FOR CISTERNS.



111,702 WM. H. TOPHAM.
PAPER-CUTTING MACHINES.

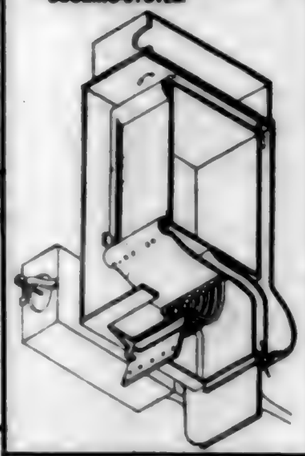


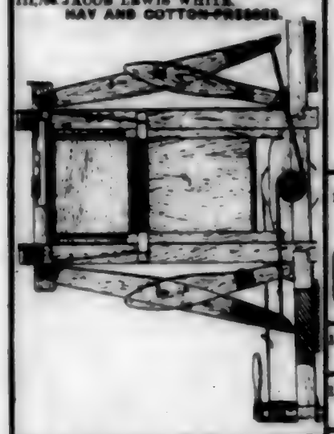
111,703 J. L. VAN WERT
HUBS FOR WHEELS.



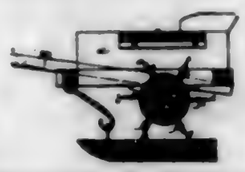
111,704 ALBERT O. WALDO.
MILLSTONE SAILS AND DRIVERS.

111,705. JAMES D. WHELPLEY.
JACOB J. STOBER.
FURNACES FOR BURNING PULVERIZED FUEL UNDER STEAM-BOILERS, EVAPORATORS, &c.





4,255. ABIEL CODDING, Jr.
ENAMELED BRACELETS.

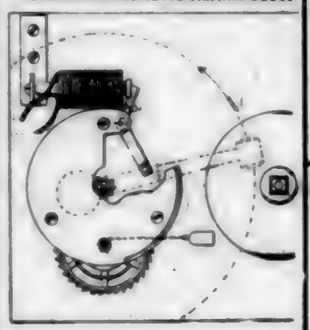


4,256. CHARLES P. GREENHALGH.
COOKING-STOVES.

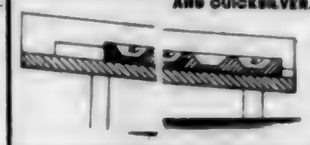
111,706. JACOB LEWIS WHITE.
HAY AND COTTON-PRESSES.

111,709. JOHN WOOD.
MACHINES FOR CUTTING CORN-STALKS.

111,710. A. B. WOODARD.
WILLIAM BRUES.
HARNESS-SNAPS.

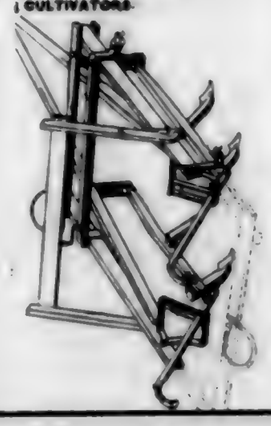


4,258. MELVILLE R. MEAD.
VENTILATORS.

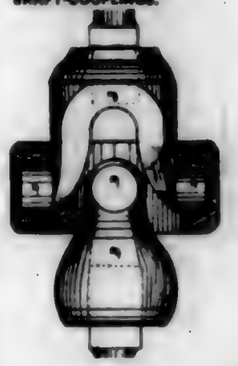


111,711. WESLEY A. WRIGHT.
MEDICATED SMOKING-TOBACCOS.

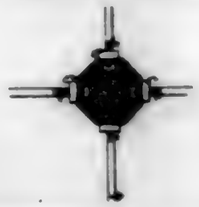
111,712. WESLEY A. WRIGHT.
TREATING SMOKING-TOBACCO.



111,707. CHARLES WILLIAMS, Jr.
JEROME REDDING.
ELECTRO-MAGNETIC ALARM-BELLS.



111,713. OLIVER H. YOUNG.
DANIEL J. VAUGN.
DEVICES FOR SAVING GOLD AMALGAM AND QUICKSILVER.



4,259. WILLIAM A. DRYDEN.
CYRUS B. DRYDEN.
CULTIVATORS.

4,260. NILAS C. SCHOFIELD
SHAFT-COUPLINGS.

111,708. GEORGE WITHINGTON.
WHEELS FOR WHEELBARROWS.

4,261. HENRY G. TYER.
OVERSHOES.

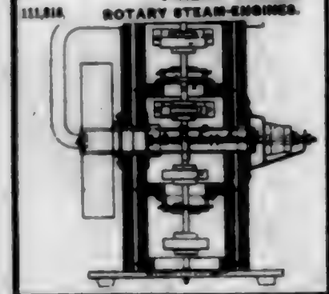
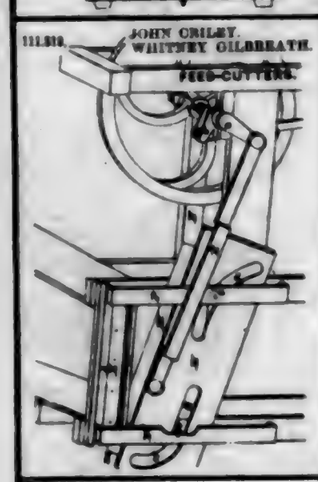
LET-OFF MECHANISMS, FOR LOOMS.



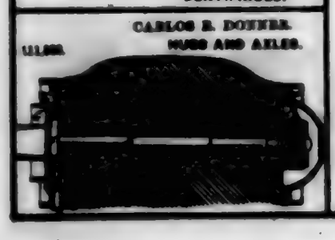
111,816. JOHN CLEGG.

111,817. JOSEPH C. COOKE. HENRY A. WHITELEY. MACHINES FOR THE MANUFACTURE OF MOLDINGS.

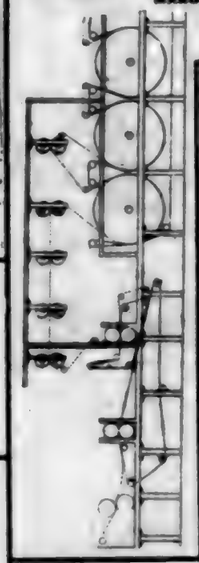


111,818. PHILIPP CRAMER. ROTARY STEAM-ENGINES.

JOHN CRILEY. WHITNEY GILBREATH. FEED-CUTTERS.



111,819.

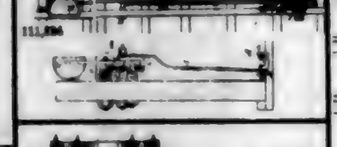


111,820. OLIVER DANFORTH. DENTIFRICES.

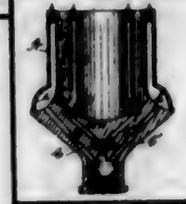
CARLOS B. DOYNE. HUBS AND AXLES.

111,821.

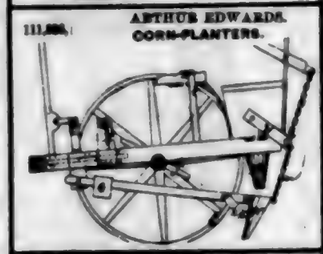
111,822. DANIEL CROSBY. APPARATUS FOR SMOOTHING AND PRESSING PAPER DURING THE MANUFACTURE.



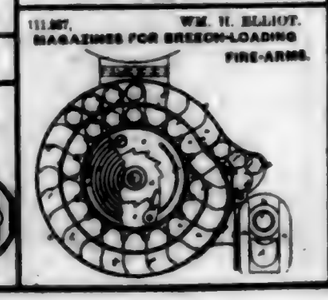
111,823. ELLIS DRAKE. SHELL-FUSES.



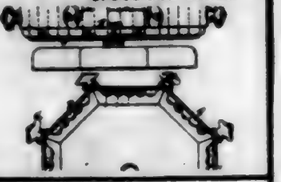
GEORGE DRAPER. RAILWAY ALARMS.



111,824.

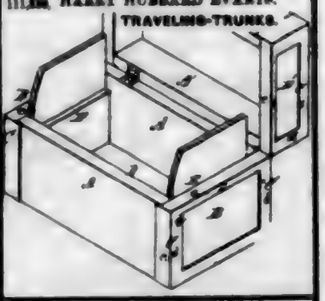


111,825. A. B. DUPAR. GAS-BURNERS.

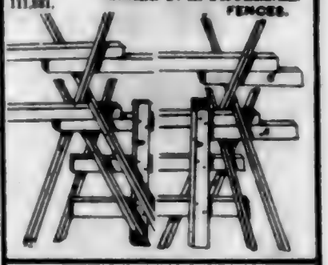


111,826. ARTHUR EDWARDS. CORN-PLANTERS.

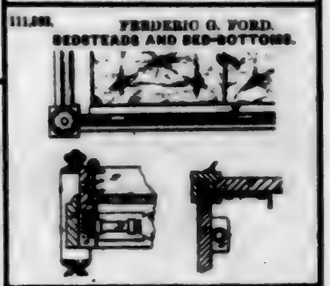
111,827. WM. H. ELLIOT. MAGAZINES FOR BREECH-LOADING FIRE-ARMS.



111,828. SAMUEL ELMER. SPOOL-SILK CASES.

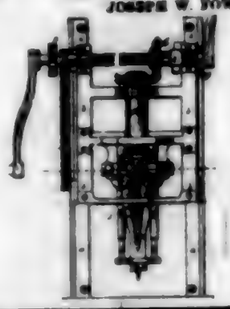


111,829. J. S. EMERSON. GAUGES FOR SAW-FILERS.



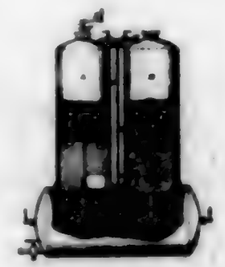
111,830. HARRY HUBBARD EVARTS. TRAVELING-TRUNKS.

111,831. ORKEY F. A. FAULKNER. FENCES.



111,832. FREDERIC G. FORD. BEDSTEADS AND BED-BOTTOMS.

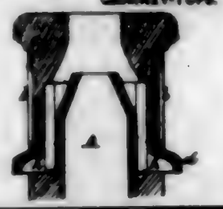
111,833. GEO. A. FORD. TACKLES FOR HOISTING SAILS.



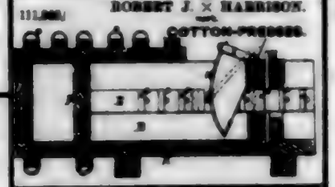
111,834 SORTING-MACHINES. JOSEPH W. BOWLS.

111,838 GRIDDLES. TITUS D. GAIL.

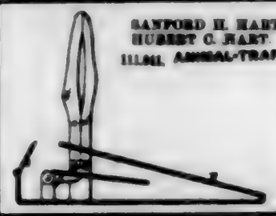
111,839 JOSEPH GARDNER. FIRE-EXTINGUISHERS.



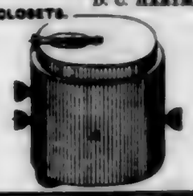
111,840 LOUIS GODDU. MACHINES FOR NAILING SHOE-SOLES WITH WIRE.



ROBT. C. GRAY. WATER-METERS.
W. B. BRITTINGHAM. 111,845.

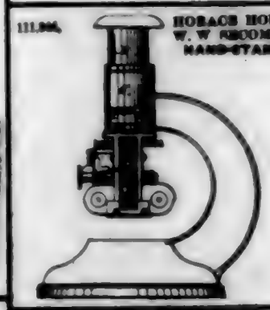


111,842 RICHARD W. GRIFFITH. CHIMNEY-TOPS.

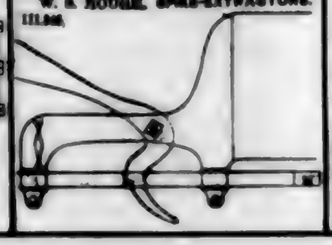


111,843 ROBERT J. & HARRISON. COTTON-PRESSES.

SANFORD H. HART.
HUBERT C. HART.
111,844. ANIMAL-TRAPS.

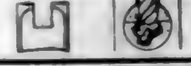


111,845. D. C. HARTMAN. EARTH-CLOSETS.

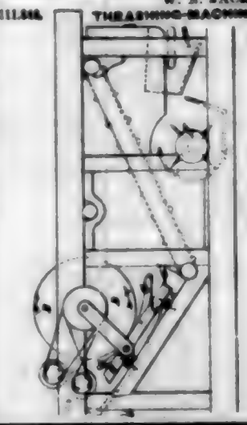


HENRY J. HENDRY. CLOTHES-LINE FASTENERS.
111,846.

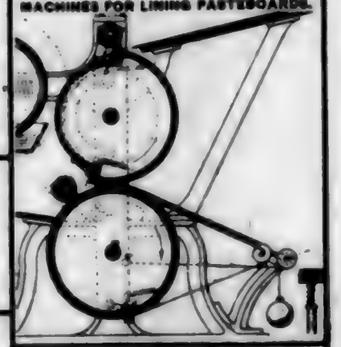
111,847. HORACE HOUT. W. W. SLOCOMBE. HAND-STAMPS.



W. A. HOUSE. SPIKE-EXTRACTORS.
111,848.

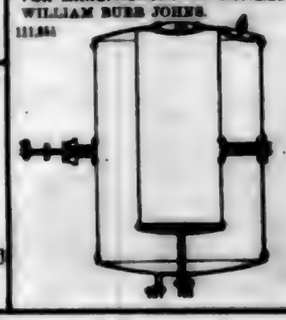


111,849 ISAAC JACOBS. PEN-HOLDERS.

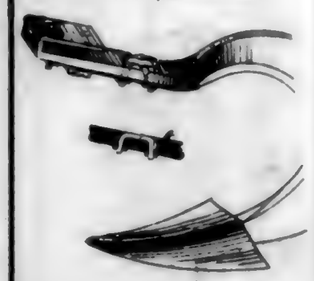


111,850. W. E. JACKSON. SASH-CORD FASTENERS.

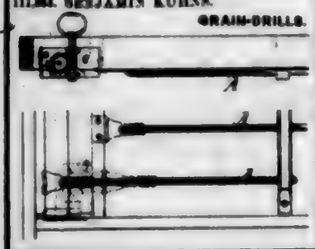
111,851 W. E. JACKSON. THRASHING-MACHINES.



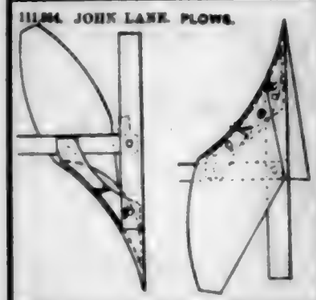
111,852 GUSTAV L. JAEGER. MACHINES FOR LINING PASTEBOARDS.



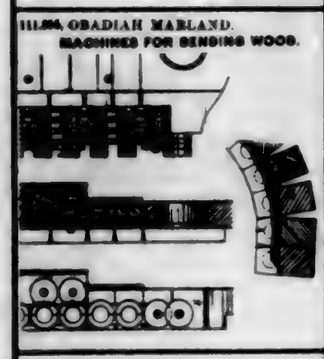
W. O. JAMES. STOVE-OVEN GRATES.
111,853.



TREATING BONES, HORNS, HOOFS, &c. FOR MANUFACTURE OF FERTILIZERS.
WILLIAM BURR JONES.
111,854

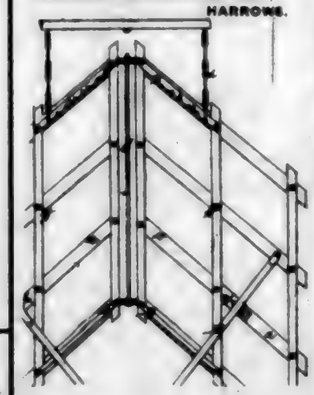


111,842. ROSS JOHNSON. ATTACHMENTS TO PLOWS FOR SUBSOILING.



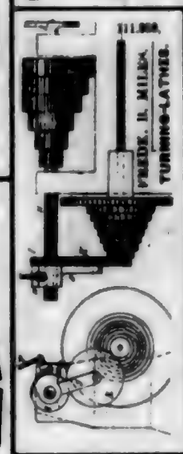
111,843. BENJAMIN KUHNS. GRAIN-DRILLS.

111,844. JOHN LANE. PLOWS.



111,845. OBADIAH MARLAND. MACHINES FOR BENDING WOOD.

111,846. EDWIN MARTIN. METALLIC CARTRIDGES.

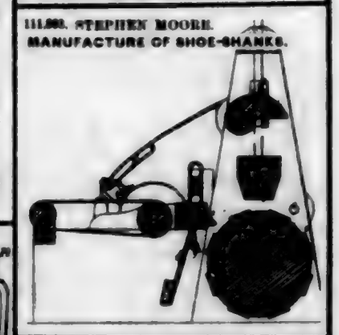


111,847. JOHN MAXTON. COMBINED CULTIVATORS AND HARROWS.

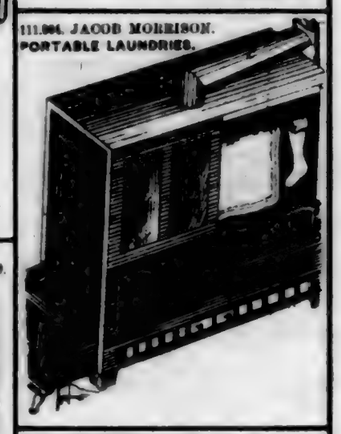
111,848. BOOK-SUPPORTS.
JOHN McCAUSLAND.
ALEXANDER McCAUSLAND.
WM. J. A. McCAUSLAND.

111,849. FREDK. H. MILES. TURNING-LATHES.

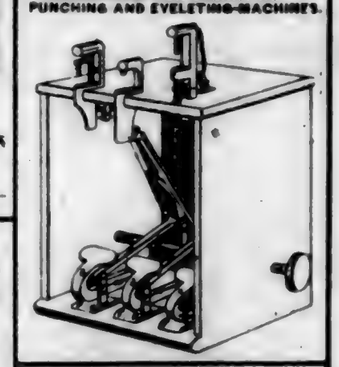
111,850. S. S. MILES. WASH-BOILERS.



111,851. WATSON J. MILLER. COFFEE-POTS.



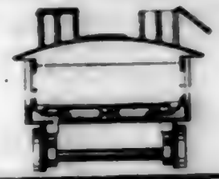
111,852. JAMES MONTGOMERY. CONSTRUCTION OF CAR-AXLES AND SHAFTS.



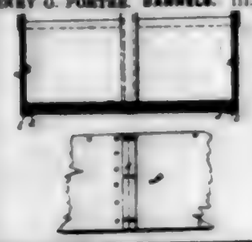
111,853. STEPHEN MOORE. MANUFACTURE OF SHOE-SHANKS.

111,854. JACOB MORRISON. PORTABLE LAUNDRIES.

111,855. CHARLES H. MORSE. MECHANISMS FOR OPERATING PUNCHING AND EYELETING-MACHINES.

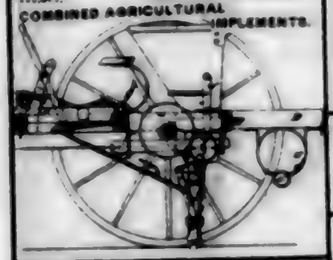


111,856. F. B. MORSE. WHIFFLETREE-PLATES.

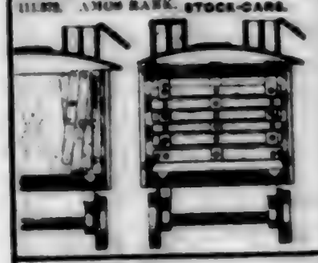


111,867. SOLOMON MORITZ MORGKOWITZ. ATTACHMENTS FOR SEWING-MACHINES.

111,868. HENRY O. PORTER. BARRELS.



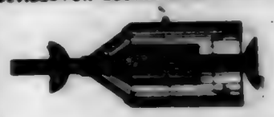
111,869. THOMAS J. POWELL. ELEVATORS AND CONVEYERS.



111,870. JOHN A. PRICE. COOKING-RANGES.

111,871. CHARLES E. RAND. COMBINED AGRICULTURAL IMPLEMENTS.

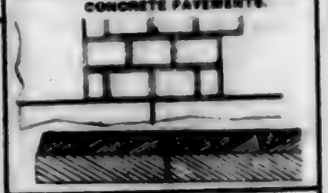
111,872. AMOS RANK. STOCK-CARS.



111,873. AMOS RANK, HENRY KING, JOEL SHARP. RAILWAY STOCK-CARS.

111,874. WILLIAM RENNYSON. CHIMNEYS FOR LIME-KILNS.

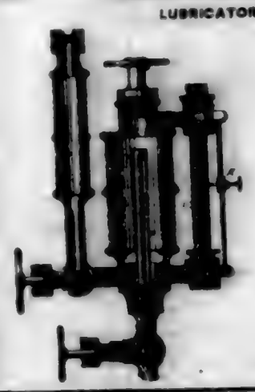
111,875. EMRY ROOKS. DEVICES FOR OBSTRUCTING ANTS.



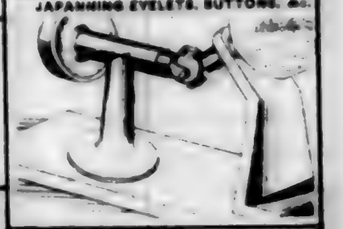
111,876. ABRAHAM RUDISILL, MARROW SELL. HORSE AND CATTLE POWDERS.

111,877. KEKO SANDER. FIRE-EXTINGUISHERS.

111,878. BEDSTEAD-FASTENINGS. JOHN KOEPPLER.

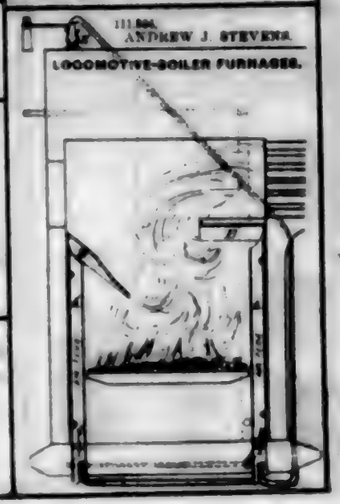


111,879. JOHN J. SCHILLINGER. CONCRETE PAVEMENTS.

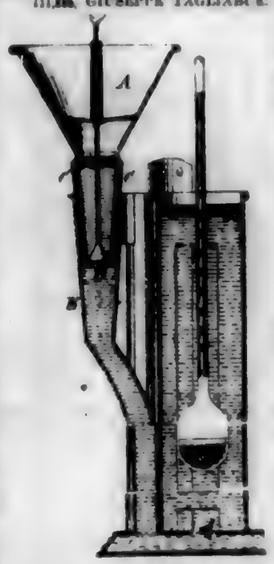


111,880. HENRY SCHWANDT. SPUR-ATTACHMENTS TO OVERSHOES.

111,881. NICHOLAS SEIBERT. LUBRICATORS.

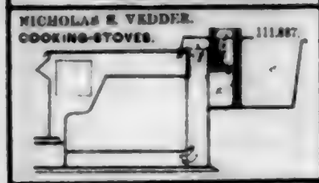


111,882. STEPHEN N. SMITH. JAPANNING EYELETS, BUTTONS, &c.

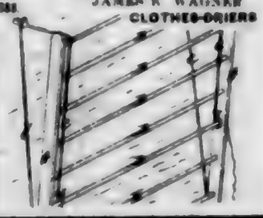


111,883. E. L. STAPLES. CORN-DROPPING ATTACHMENTS FOR HOES.

111,884. ANDREW J. STEVENS. LOCOMOTIVE-BOILER FURNACES.



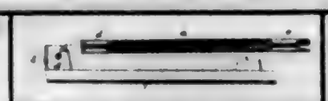
111,886. GIUSEPPE TAGLIABUE. APPARATUS FOR ASCERTAINING THE PROOF-SPIRITS IN FERMENTED MASH.



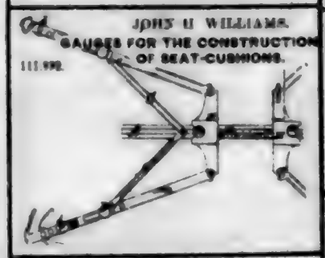
111,887. JESSE P. TAPLEY. PAPER-FILES.

111,888. NICHOLAS S. VEDDER. COOKING-STOVES.

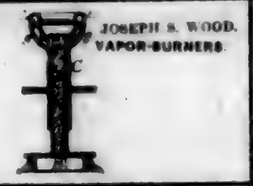
111,889. JAMES K. WAGNER. CLOTHES-DRIERS



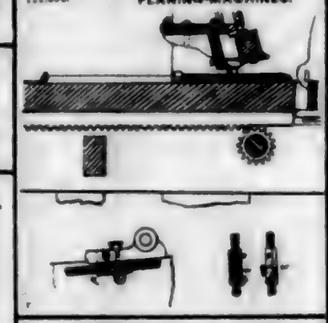
111,890. MICHAEL WALPOLE. PINCERS FOR SHOE-MAKERS.



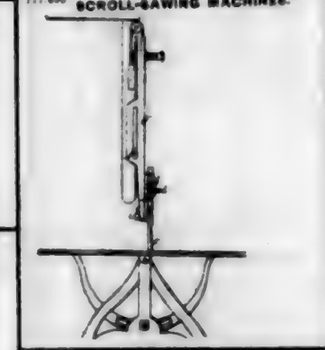
111,891. GEORGE ALLEN WARREN. JOINERS' PLANES.



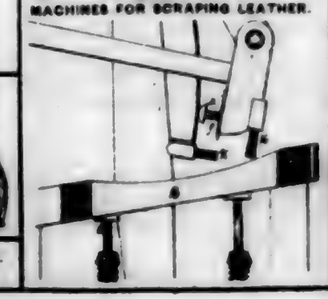
111,892. WILLIAM P. WENTWORTH. TIPS FOR WOODEN SHOVELS.



111,893. JOHN H. WILLIAMS. GAUGES FOR THE CONSTRUCTION OF SEAT-CUSHIONS.

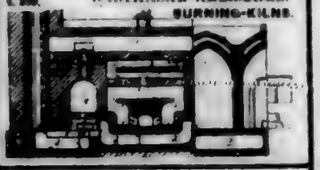


111,894. JOSEPH S. WOOD. VAPOR-BURNERS.

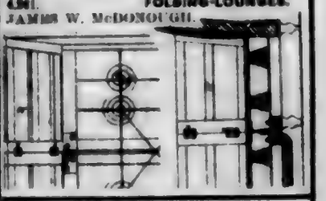


111,895. SOLOMON A. WOODS. PLANING-MACHINES.

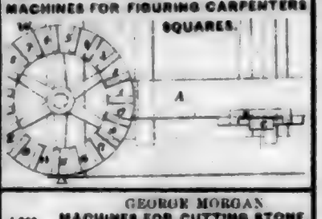
111,896. SAMUEL MANSEER YOUNG. SCROLL-SAWING MACHINES.



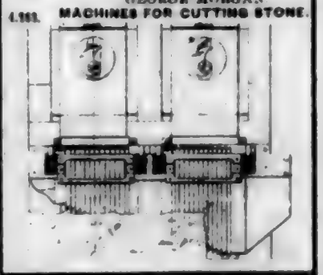
4,264. JAMES T. BARNSTEAD. MACHINES FOR SCRAPING LEATHER.



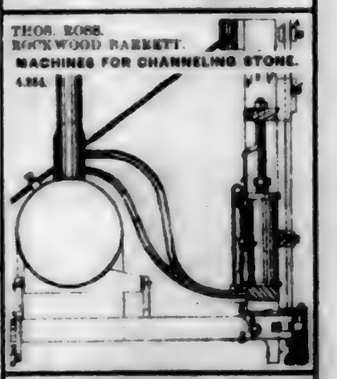
4,265. JOHN HASKINS. PERFORATED SHEET-RUBBER.



4,266. BALTHASAR KREISCHER. BURNING-KILNS.



4,267. FOLDING-LOUNGES. JAMES W. McDONOUGH.

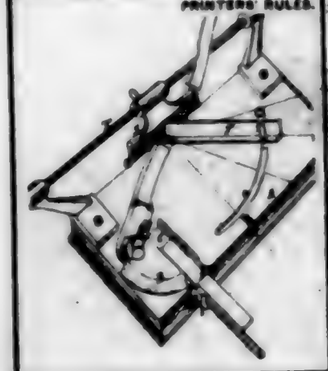


4,268. NORMAN MILLINGTON. MACHINES FOR FIGURING CARPENTERS SQUARES.

4,269. GEORGE MORGAN. MACHINES FOR CUTTING STONE.

4,270. THOS. ROSS, ROCKWOOD BARRETT. MACHINES FOR CHANNELING STONE.

4,271. AMOS SMITH. MACHINES FOR REDUCING CRACKLINGS, &c., FOR FERTILIZERS.



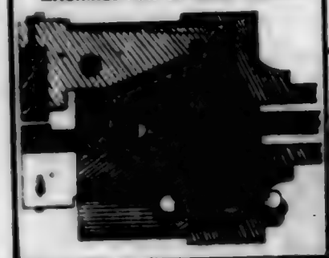
ILLUSTRATIONS OF PATENTS

ISSUED FROM

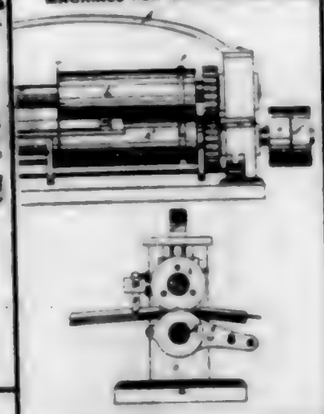
THE UNITED STATES PATENT OFFICE

FEB. 21, 1871.

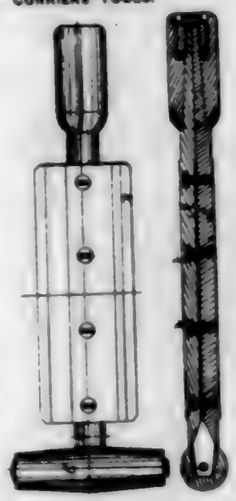
111,896. FRANK H. AIKEN.
MACHINES FOR CUTTING AND MITERING PRINTERS' RULES.



111,897. JOHN F. ALLEN.
GOVERNOR-VALVE CONNECTIONS.



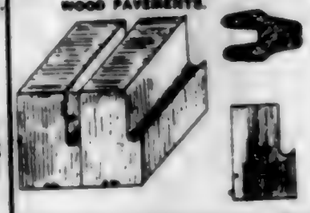
111,898. LEVI ARNOLD. FISH-HOOKS.



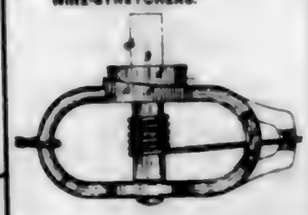
111,899. JAMES S. ATKINSON.
MACHINES FOR CUTTING SCREWS.

111,900. HORACE E. BAKER.
MACHINES FOR CUTTING LEATHER.

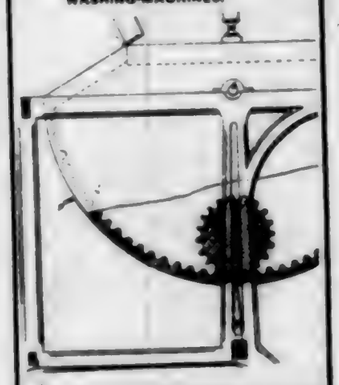
111,901. JAMES T. BARNSTRAD.
CURRIERS' TOOLS.



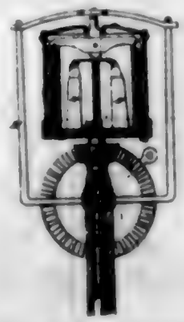
111,902. J. A. BOSTWICK.
TAPS FOR OIL-CANS.



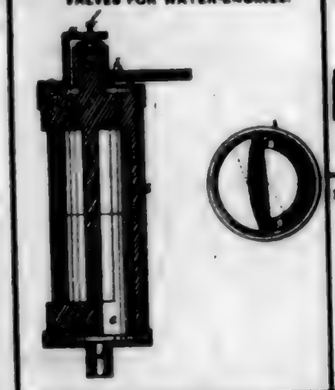
111,903. THOMAS S. BURNETT.
SPRING CARRIAGE-CUSHIONS.



111,904. WILLIAM BUSHNELL.
WOOD PAVEMENTS.

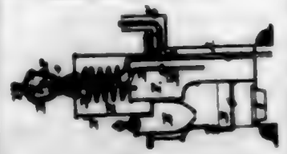


111,905. ALBERT BYINGTON.
WIRE-STRETCHERS.

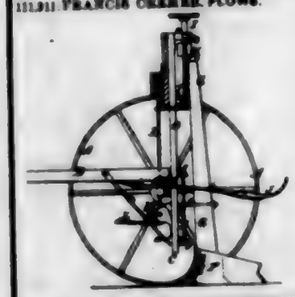


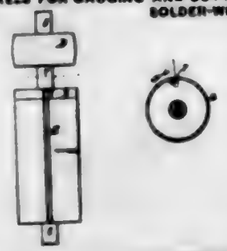
111,906. WILLIAM H. CARMAN.
RICHARD P. McCOLLUM.
WASHING-MACHINES.

111,907. FRANKLIN B. CHAPMAN.
CHURNS.



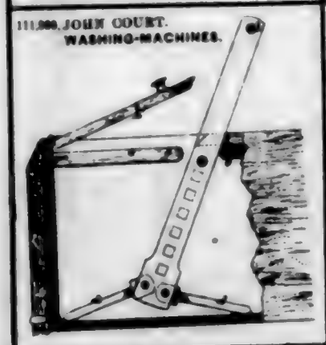
111,909. ABEL COATES.
GEO. W. LASCELL.
VALVES FOR WATER-ENGINES.





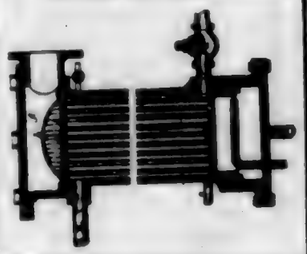
111,910. EDWARD MORTIMER DEEY.
BASE-BURNING STOVES.

111,911. FRANCIS CREMER. PLOWS.

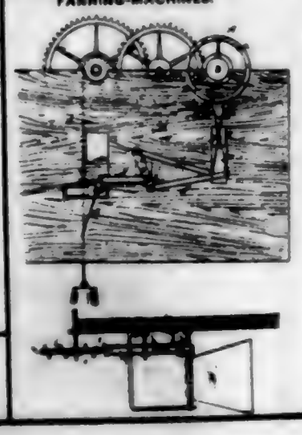


111,912. LEWIS CUTTING.
MANDRELS FOR GAUGING AND CUTTING SOLDER-WIRE.

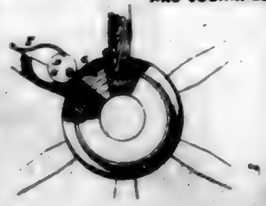
111,913. REUBEN DANIELS.
VEGETABLE-CRUSHERS.



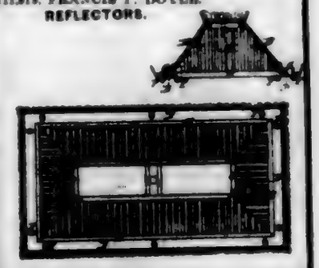
111,914. JOHN COURT.
WASHING-MACHINES.



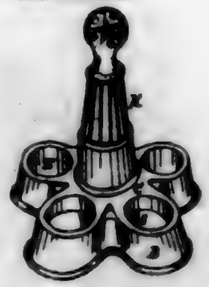
111,915. GEORGE W. DILLER.
FASTENING END-BOARDS IN WAGONS.



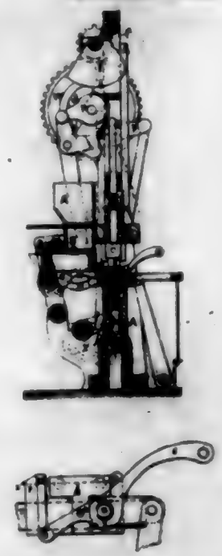
111,916. JOSEPH DILWORTH.
JOHN C. HODGINS.
CONDENSERS AND FEED-WATER HEATERS FOR STEAM-ENGINES.



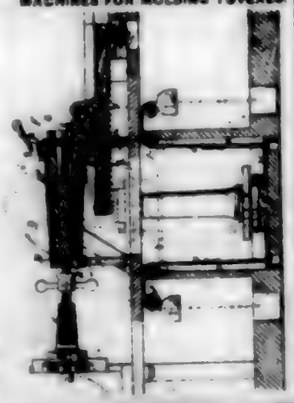
111,917. EDWARD P. DORENUS.
FANNING-MACHINES.



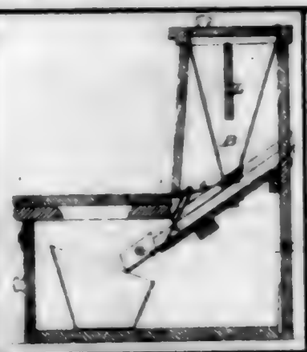
111,918. EDWIN DOUDNEY.
LUBRICATORS FOR WHEELS, PULLEYS, AND JOURNALS.



111,919. FRANCIS P. DOYLE.
REFLECTORS.

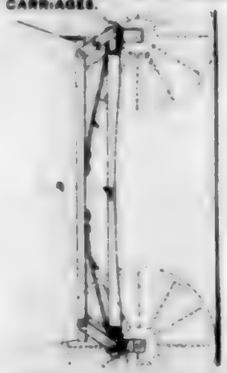


111,920. JOSIAH W. ELLS.
CRUET-STANDS.



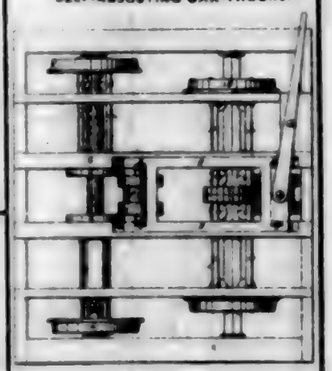
111,921. JOSIAH S. ELLIOTT.
MACHINES FOR FORMING ARTIFICIAL STONE.

111,922 SAMUEL ENGLISH
MACHINES FOR MOLDING TUYERES.

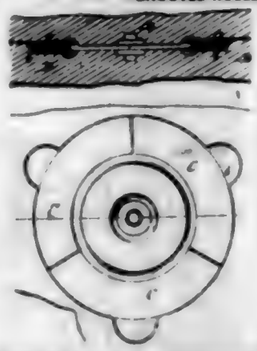


111,923 CHRISTOPHER D. FINDLAY.
DAVID D CRAIG.
PRESSES FOR HAY, COTTON, &c.

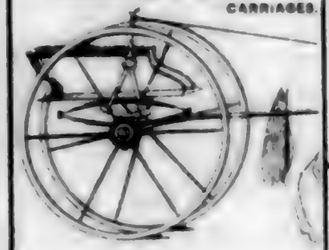
111,927 LEVI GRISWOLD. MILLING-TOOLS.



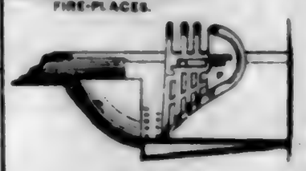
111,928 CHAUNCEY HOLMES GUARD
CARRIAGES.



111,932 ELISHA V. HEWITT.
COW-MILKERS.

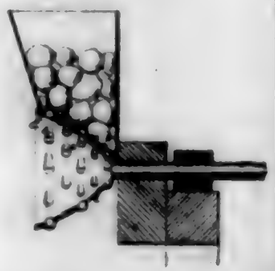


111,933 EDWARD HIPKINS.
SELF-ADJUSTING CAR-TRUCKS.

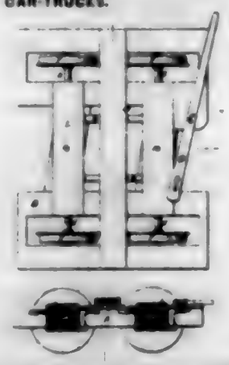


111,934 JOHN HERALD.
PATTERNS FOR CASTING
GROOVED ROLLERS.

111,924 GEORGE W. GODWYN
HORSE-HOLDER ATTACHMENTS TO
CARRIAGES.

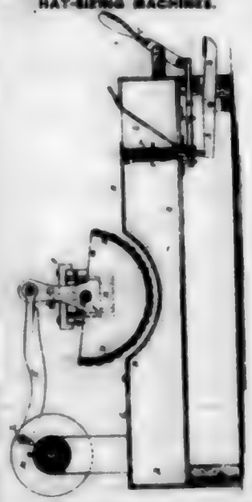


111,929 JOSEPH HACKETT.
FIRE-PLACES.

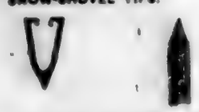


111,931 WM. GOWEN.
CULTIVATOR-PLOWS.

111,930 GEORGE R. MANLIN.
MAKING CIDER.

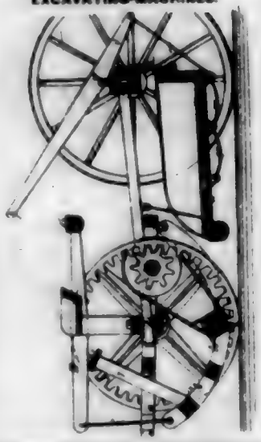


111,934 EDWARD HIPKINS.
CAR-TRUCKS.

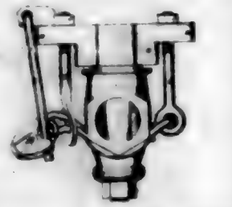


111,926 EDMUND GRIFFITH.
EARTH-CLOSETS.

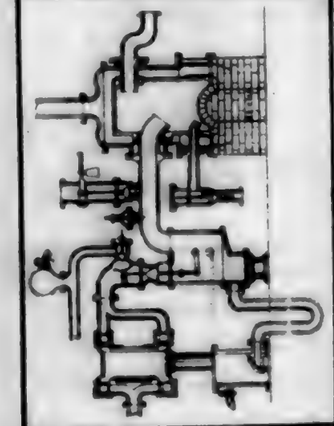
111,935 JAMES H. HOPKINS.
HAT-SIZING MACHINES.



111,939 KERR HUBBARD.
SNOW-SHOVEL TIPS.



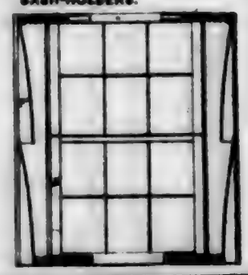
111,936 P. D. HORTON. FLY-TRAPS
EZRA T. BRYAN.



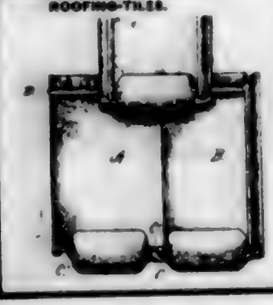
111,940 JOSEPH M. HUGHES.
ANDREW J. MAPES.
EXCAVATING-MACHINES.

111,944 OWEN W. JONES.
DRAFT-DEVICES FOR THREE HORSES.

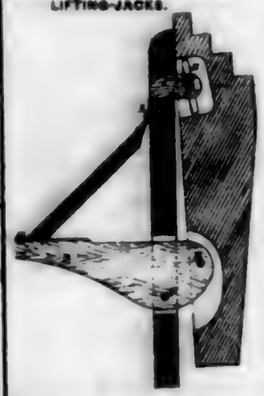
111,937 JOHN HOUPT. STEAM-ENGINES.



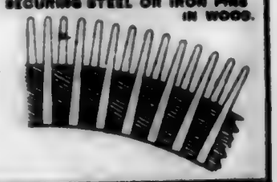
111,941 CHARLES F. HUNTER.
MACHINES FOR STRAIGHTENING BOLTS.



111,945 MICHAEL J. A. KRANZ.
COMPOUNDS FOR PLATING
AND POLISHING.

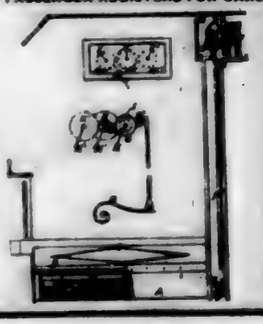


111,943 WM. HASKELL KING.
JARED ROWLAND
SASH-HOLDERS.

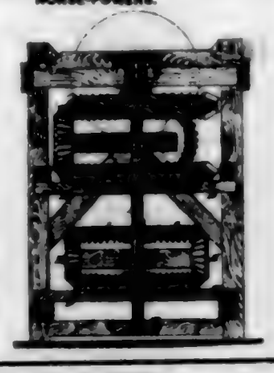


111,938 CHARLES HOWARD.
ROOFING-TILES.

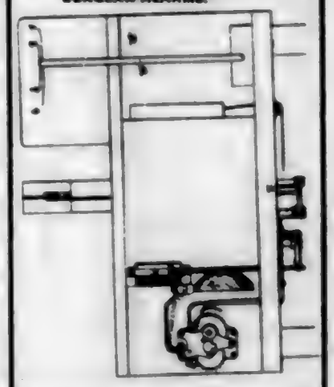
111,942 BENJAMIN F. JOHNSON.
LIFTING-JACKS.



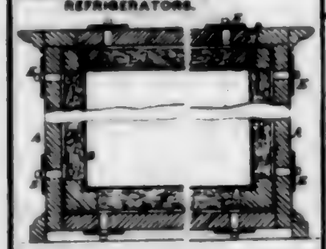
111,947 RICHARD KITSON.
SECURING STEEL OR IRON PINS
IN WOOD.



111,943 J. EVANS JONES.
LOCK-STOP COCKS.

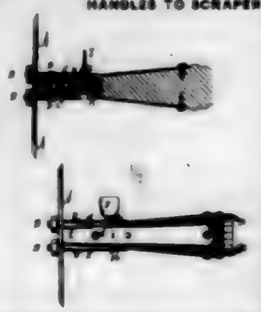


111,946 JOHN KURZ.
PASSENGER-REGISTERS FOR CARS.



111,949. DANIEL L. LAMON.
HORSE-POWERS.

111,950. JOHN McDOWELL.
BURGLAR-ALARMS.



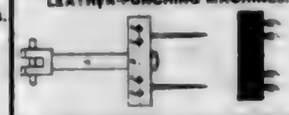
111,950. JNO. H. LESTER.
REFRIGERATORS.

111,951. DENNIS G. LITTLEFIELD.
BASE-BURNING STOVES.

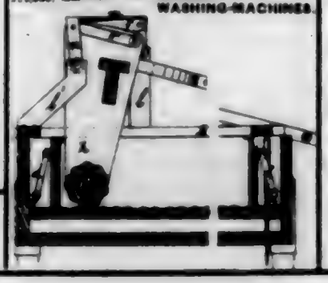
111,952. EDWARD C. LOCKE.
METHODS OF ATTACHING HANDLES TO SCRAPERS.

111,953. JOHN LOUGH.
SAW-TOOTH SWAGES.

111,954. JOSIAH LYMAN.
BEAM-COMPASSES.

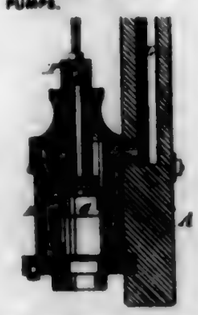


111,955. JOSEPH MARSHALL.
BATHING-BRUSHES.

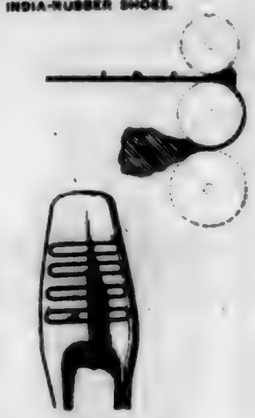


111,956. JOHN W. MASURY. MILLSTONES.

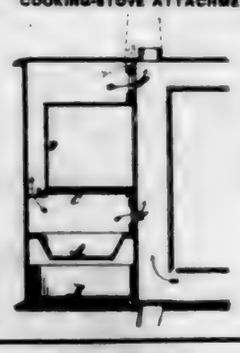
111,957. JOHN MATHER.
LEATHER-PUNCHING MACHINES.



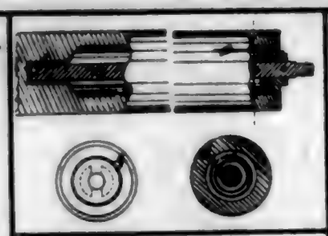
111,958. ERWIN W. MAXSON.
WASHING-MACHINES.



111,960. WILLIAM C. McGILL.
LAMP-BURNERS.

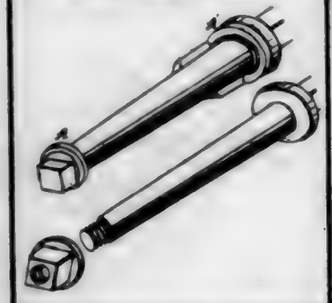


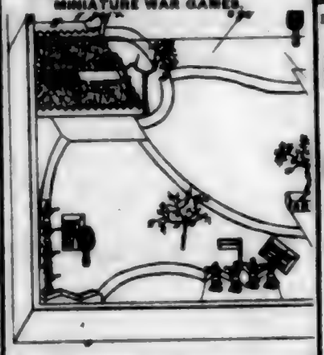
111,961. CHARLES L. MERRILL.
PUMPS.



111,963. JOHN EVANS.
C. MEYER.
INDIA-RUBBER SHOES.

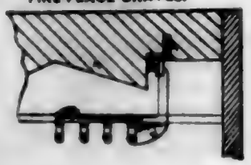
111,963. NATHAN S. MUNSON.
COOKING-STOVE ATTACHMENTS.



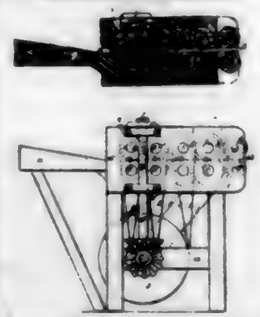


111,968. JAMES EZRA POLLARD.
FELTED FABRICS.

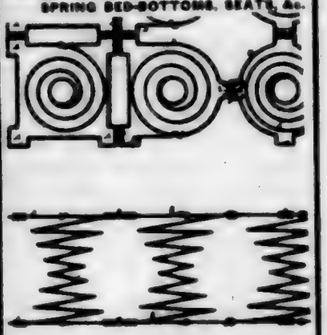
111,969. BENJAMIN MORTON.
ANTI-RATTLING WASHERS.



111,969. CASIMIRO PORTILLO.
MINIATURE WAR GAMES.

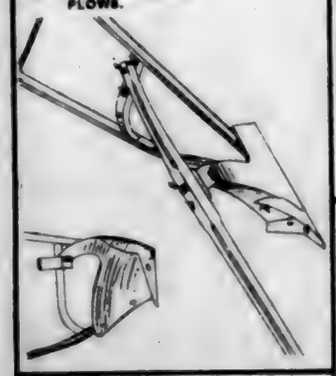


111,970. WM. PRATT.
LARD AND BUTTER BOXES.

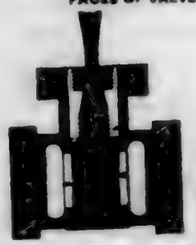


111,971. WILLIAM PULSFORT.
FIRE-PLACE GRATES.

111,972. ISRAEL L. G. RICE.
MACHINES FOR BRONZING.

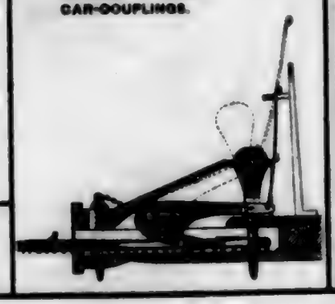


111,974. CHARLES RICH.
SPRING BED-BOTTOMS, SEATS, &c.

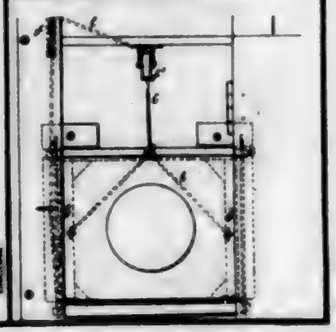


111,975. ALEXANDER RICKARD. PLOWS.

111,965. JAMES OLIVER.
PLOWS.



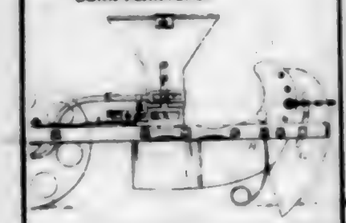
111,966. SAMUEL J. PRET.
DANIEL SAWYER.
DEVICES FOR GRINDING THE FLAT FACES OF VALVE-SEATS.



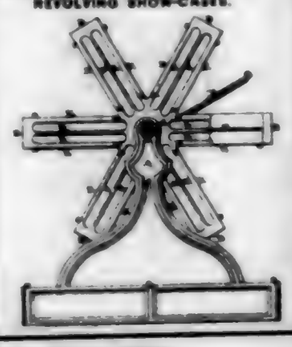
111,967. P. W. PHILLIPS.
CURTAIN-FIXTURES.

111,973. SAMUEL H. REED.
GEORGE A. REED.
CAR-COUPLINGS.

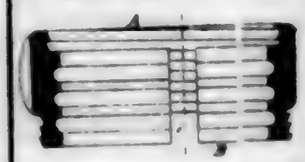
111,976. FRANK RIEDEL. PRIVIES.



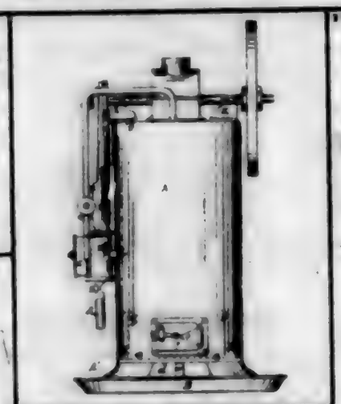
111,977 DANIEL A. RUSSELL.
IMPLEMENTS FOR SLITTING AND LOOPING RAGS FOR CARPETS.



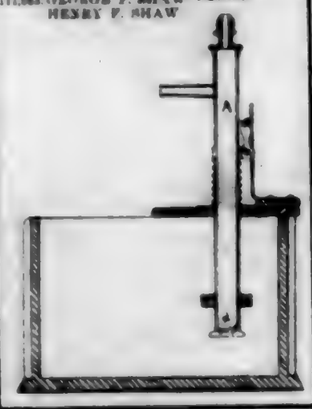
111,978 ADOLPHE SALMON. SHIRTS



111,979 JOSEPH SCHOTT
CORN-PLANTERS.

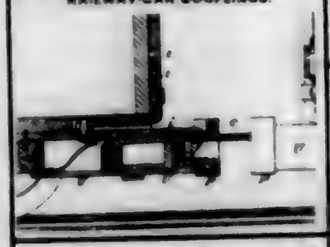


111,980 WILLIAM J. SCOTT.
REVOLVING SHOW-CASES.



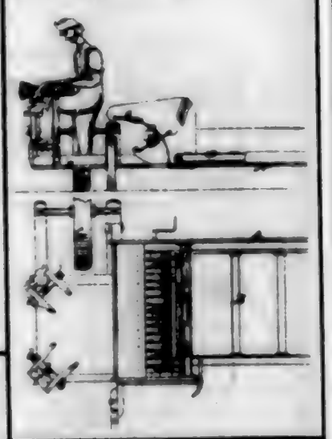
111,981 GEORGE SEWELL.
HOSE-RINGS

111,982 JOEL SHARP
JOSEPH W. THOMPSON
STEAM-ENGINES.



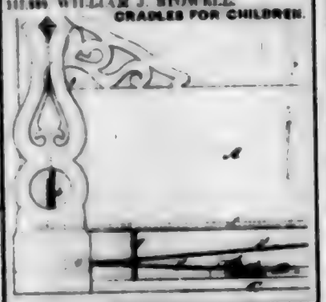
111,983 GEORGE F. SHAW. PUMPS.
HENRY F. SHAW

111,984 BENJ. F. SMITH.
NON-CONDUCTING MATERIALS FOR COVERING STEAM-BOILERS, &c.

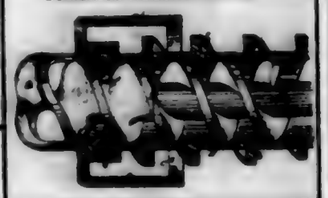


111,985 MARCUS D. SMITH.
RAILWAY-CAR COUPLINGS.

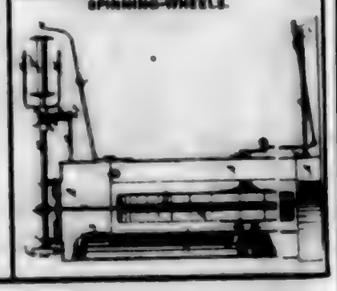
111,986 HOMER A. SMYTHE.
HEELS OF BOOTS AND SHOES.



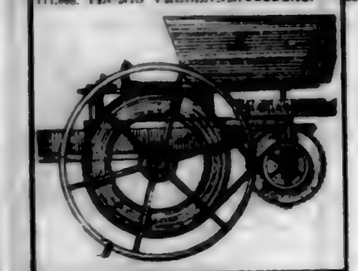
111,987 GEO. H. SPAULDING.
HARVESTERS.



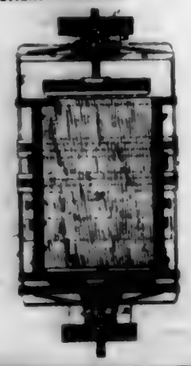
111,988 JOSEPH M. STONE.
CONSTRUCTION OF CYLINDERS FOR CARDING AND OTHER MACHINES.



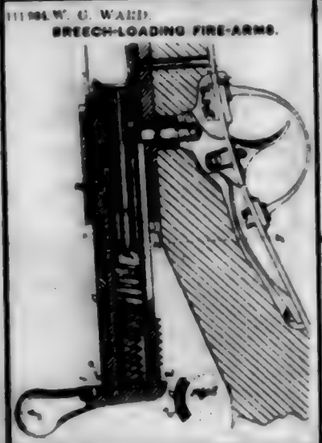
111,989 WILLIAM J. STOWELL.
CRADLES FOR CHILDREN.



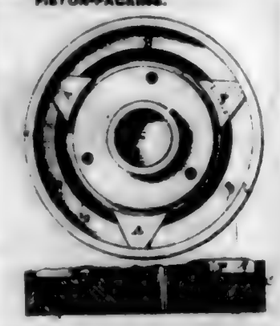
111,990 OWEN W. TOWNSEND.
COMBINED AUGERS AND REAMERS.



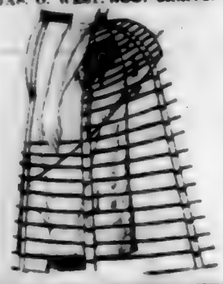
111,991 FRANK VOEGTLI.
SPINNING-WHEELS.



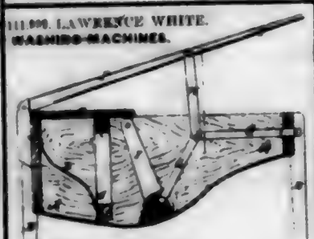
111,992 TEUNIS VREELAND. SEEDERS.



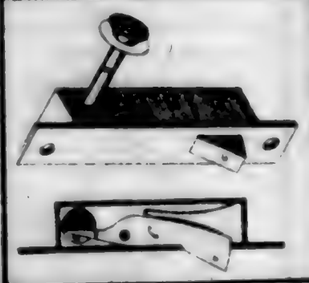
111,993 EDWIN R. WALLACE
BALING-PRESSES.



111,994 W. G. WARD.
BREECH-LOADING FIRE-ARMS.

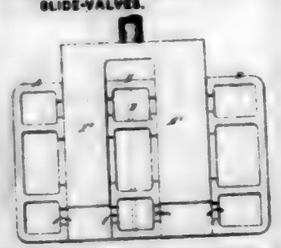


111,995 GEORGE WELLS.
PISTON-PACKING.



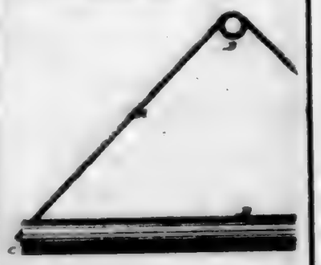
111,996 JAS. O. WEST. HOOP-SKIRTS.

111,997 LAWRENCE WHITE.
WASHING-MACHINES.

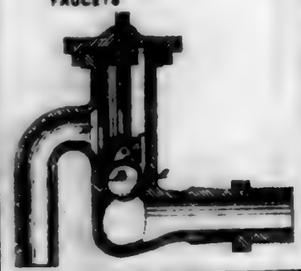


111,998 WM. M. WARREN. SASH-HOLDERS.

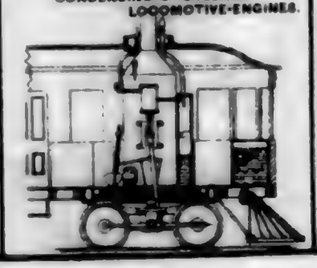
111,999 FRANK WARNBOURNE.
NUT-BLANKS.



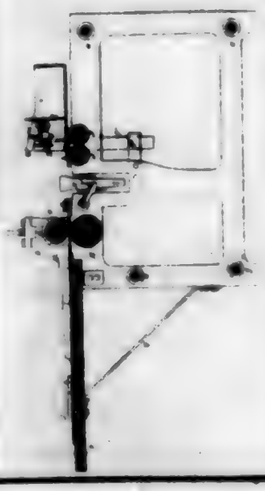
112,000 JOHN C. WOODHEAD.
SLIDE-VALVES.



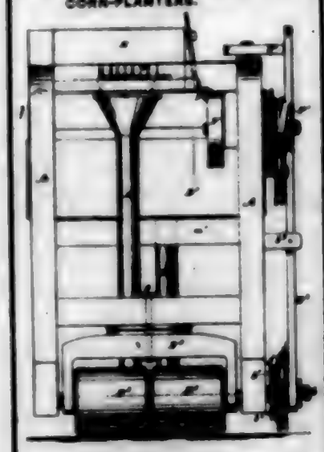
112,001 JOHN P. ALLEN.
REFINING IRON, REDUCING ORES, &c.



112,004 HENRY ALSOP
TOWEL-HOLDERS.

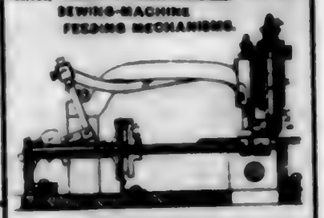


112,000 WILLIAM CROSBY WISE.
JOHN ASHMAN.
FAUCETS

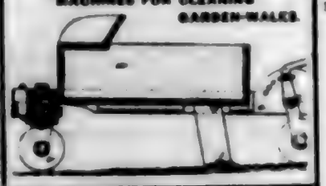


112,001 JOSEPH P. WOODBURY.
CONDENSING DOUBLE-END LOCOMOTIVE-ENGINES.

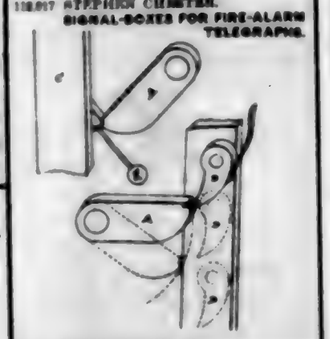
112,005 PETER EDWARD ARMSTRONG.
PAPER-BAG MACHINES.



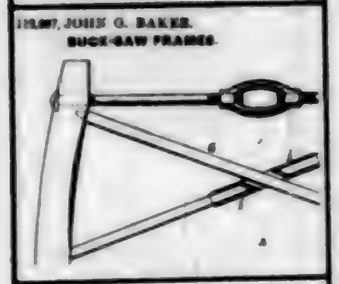
112,006. JAMES M. AITCHISON.
CORN-PLANTERS.



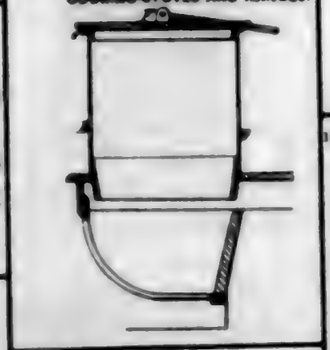
112,011. WILSON BOMANNAN.
SEAL-LOCKS.



112,016. MARY F. CARPENTER.
SEWING-MACHINE
FEEDING MECHANISMS.

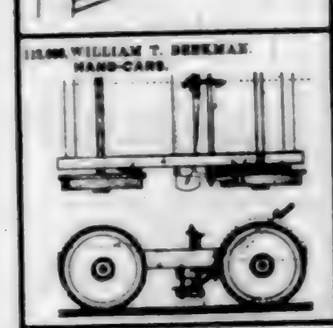


112,012. PETER BOICE.
MACHINES FOR CLEANING
GARDEN-WALKS.

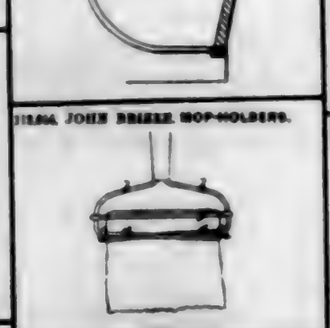


112,017. STEPHEN CHESTER.
SIGNAL-BOXES FOR FIRE-ALARM
TELEGRAPHS.

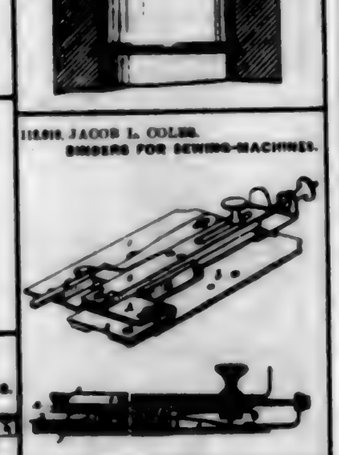
112,007. JOHN G. BAKER.
BUCK-SAW FRAMES.



112,013. LEWIS BRIDGE.
DETACHABLE MAGAZINES FOR
COOKING-STOVES AND RANGES.

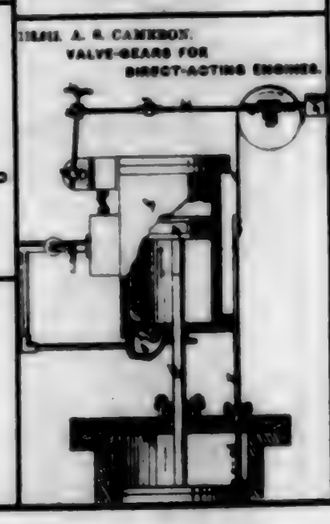


112,018. NATHAN T. COBVIX.
PUMPS.



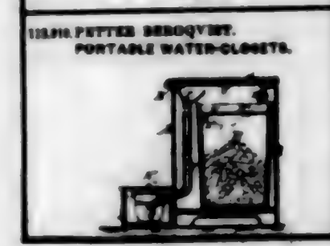
112,008. WILLIAM T. BERKMAN.
HAND-CARS.

112,014. JOHN BREESE. HOP-HOLDERS.

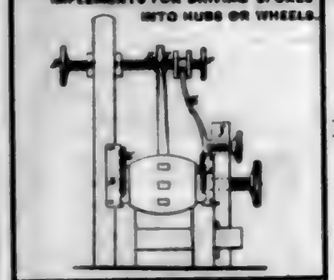


112,019. JACOB L. COLES.
BINDERS FOR SEWING-MACHINES.

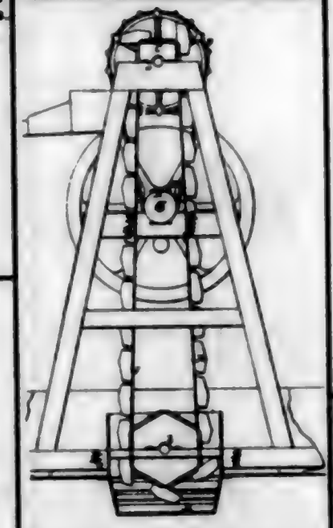
112,009. CHARLES EDWARD BELL.
WINDOW-WASHERS.



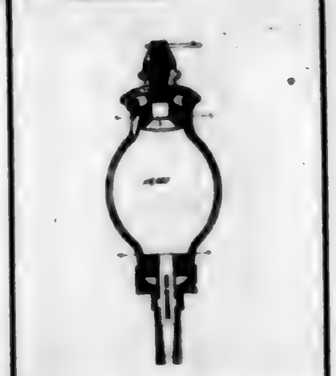
112,015. A. S. CAMERON.
VALVE-GEARS FOR
DIRECT-ACTING ENGINES.



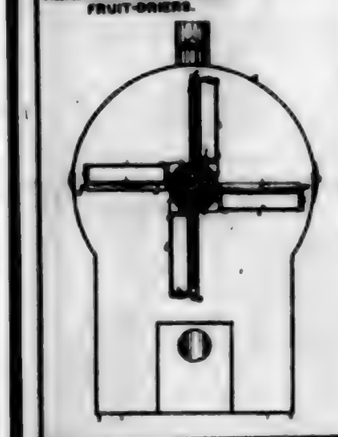
112,020. HENRY G. DE LAND.
LUBRICATORS FOR STEAM-CHESTS.



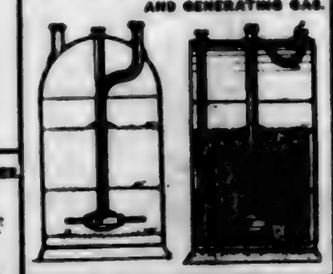
112,010. PETTER BERGQVIST.
PORTABLE WATER-CLOSETS.



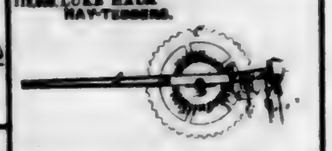
112,021. WESLEY EDWARDS.
IMPLEMENTS FOR DRIVING SPOKES
INTO HUBS OR WHEELS.



112,026. CHARLES FRIEDRICH FISHER.
FLOATING WATER-ELEVATING WHEELS.

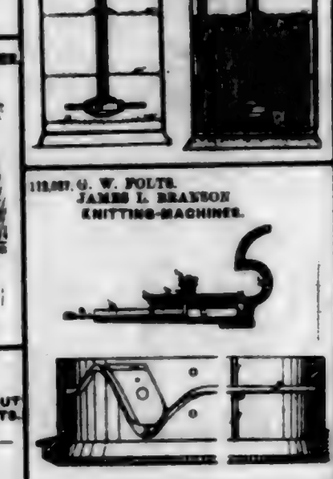


112,031. STEPHEN F. GATES.
LUBRICATORS.

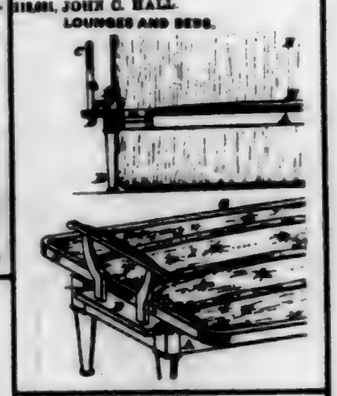


112,022. BENJAMIN F. ELLS.
FRUIT-DRIERS.

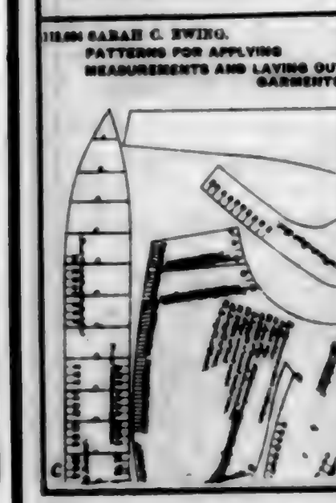
112,027. FISHER AMOS FISHER.
APPARATUS FOR CARBURETING
AND GENERATING GAS.



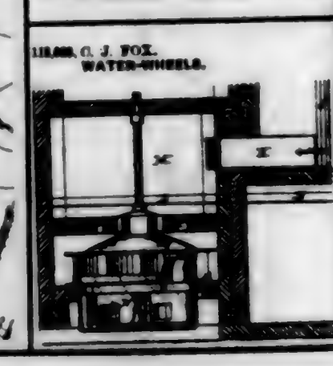
112,032. LUKE HALE.
HAY-TEDDERS.



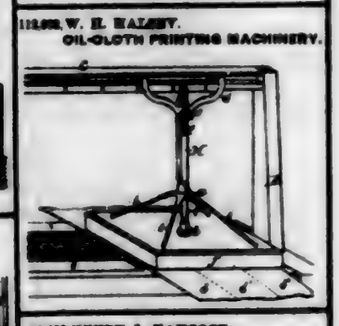
112,023. J. J. ALEXANDER BROSSINGER.
MOSQUITO-NETS.



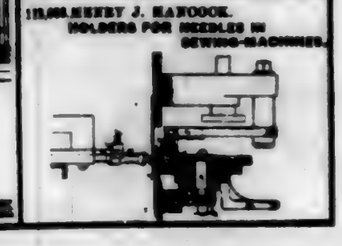
112,028. G. W. FOLTS.
JAMES L. BRAYSON
KNITTING-MACHINES.



112,033. JOHN C. HALL.
LOUNGES AND BEDS.



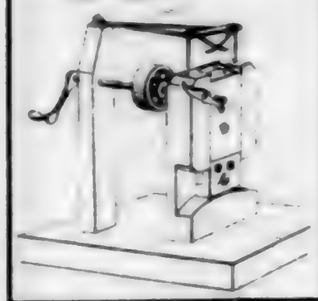
112,024. SARAH C. EWING.
PATTERNS FOR APPLYING
MEASUREMENTS AND LAYING OUT
GARMENTS.



112,029. C. J. FOX.
WATER-WHEELS.

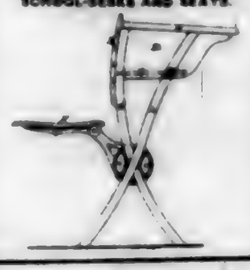
112,034. W. H. HALSEY.
OIL-CLOTH PRINTING MACHINERY.

112,035. HENRY J. HAYDOCK.
HOLDERS FOR NEEDLES IN
SEWING-MACHINES.



112,034. NAPOLEON B. HEAFER.
ROAD-BEDS.

112,035. WILLIAM H. MEDORA
FAUCETS.

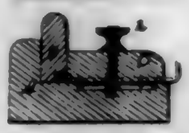


112,036. BENJ. HERSHEY.
TRIP-HAMMERS.

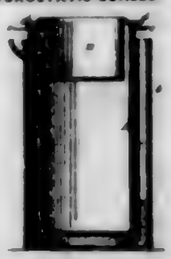
112,037. RICHARD DUDLEY.
BENJAMIN HERSHEY.
SPRINGS FOR VEHICLES.

112,038. CHARLES J. HIGGINS.
SCHOOL-DESKS AND SEATS.

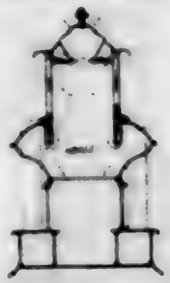
112,039. EPHRAIM C. HODGE
PLOW-COLTERS.



112,040. F. M. HOLMES.
FOLDING-CHAIRS.



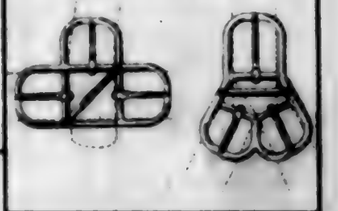
112,041. F. M. HOLMES.
FOLDING-CHAIRS.



112,042. DENNET HUTCHINS.
WINDOW-SASH LOCKS.

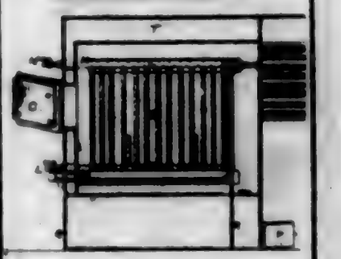
112,043. ORVIS D. HUDSON.
HYDROSTATIC SCALES.

112,044. GEORGE G. HUNT.
BASE-BURNING STOVES.



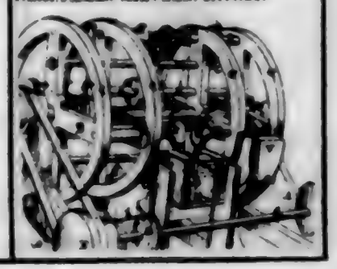
112,045. CARLETON B. HUTCHINS
MANUFACTURE OF PAPER AND LEATHER-BOARD.

112,046. ELIAS S. HUTCHINSON.
MANUFACTURE OF FLOUR.



112,047. JOHN JOHNSON. VALVES.

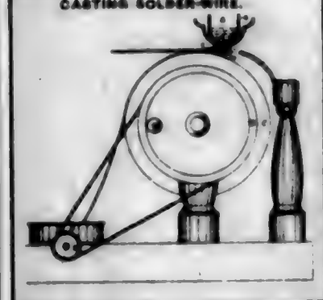
112,048. LLEWELLYN E. JONES.
THEODORE M. BARBER.
HALTER-BUCKLES AND RINGS.



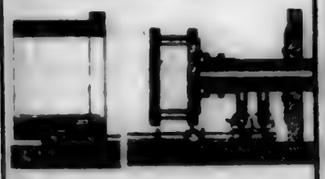
112,049. JAMES L. JUDGE.
STEAM-GENERATORS.

112,050. JAMES FRANKLIN KELLOGG.
TUCK-MARKERS FOR SEWING-MACHINES.

112,051. JAMES KIRVLAN. LATHES.



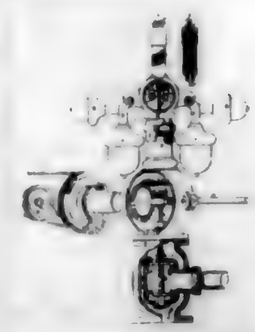
112,052. SIDNEY D. KING
DUMPING-CARS.



112,053. K. KRENKEL.
FOLDING-BEDSTEADS.

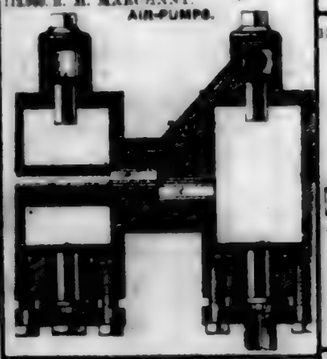
112,054. EDUARD M. LANG.
CASTING SOLDER-WIRE.

112,055. TOLBERT LANSTON
DUMB-WAITERS.



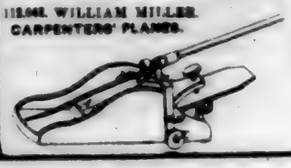
112,056. J. S. LEWIS. BOOTS.

112,057. WILLIAM H. LOVEJOY.
MODES OF LASTING SHOES



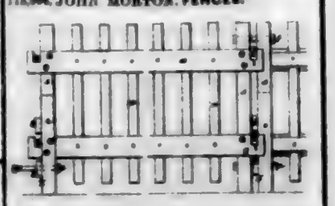
112,058. JOHN D. LYNDE.
ENGINE-GOVERNORS.

112,059. DAVID D. MALLORY
QUARTZ-MILLS.

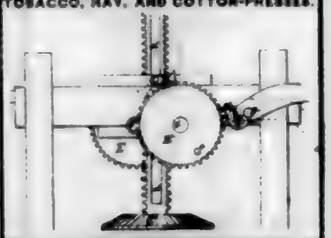


112,060. E. M. MARCHANT.
AIR-PUMPS.

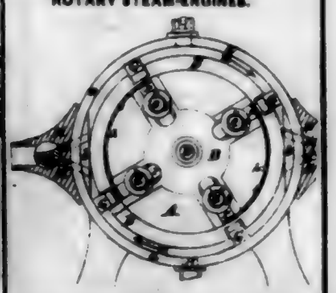
112,061. JOHN H. MARTIN.
HARNESS-SADDLE TREES.



112,062. WILLIAM MILLER.
CARPENTERS' PLANES.



112,063. JOHN C. MILLS. AUGER-BITS.



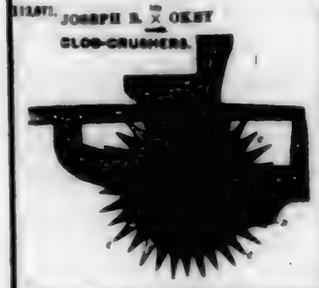
112,064. JOHN MORTON. FENCES.

112,065. LEWIS H. MOSS.
TOBACCO, HAY, AND COTTON-PRESSES.

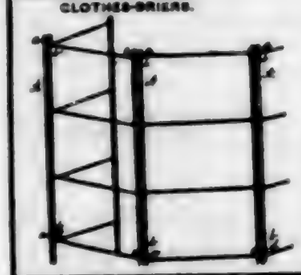
112,066. JOSEPH C. MORSHOLDER.
ROTARY STEAM-ENGINES.

111,067. ROBERT NEUBURGER. CURTAINS.
FRIEDRICH BRAUER.

112,068. CHAS. M. PIKE.
MANUFACTURE OF SILICON STEEL.



112,069. WM. STEVENS.
APPARATUS FOR STEAMING OIL-WELLS.



112,070. WM. HARRISON NEWTON.
BOTTLE-CORKS.

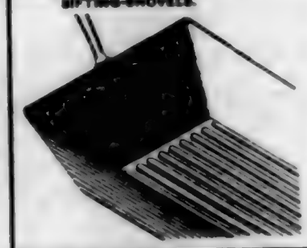
112,071. JOSEPH B. [illegible] OKEY
CLOD-CRUSHERS.

112,072. ENOS L. PARKER.
CLOTHES-DRIERS.

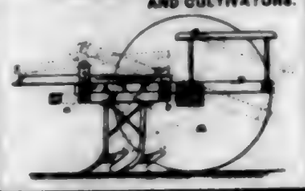
112,073. MARTIN W. POND.
HARNESS-PADS.

112,074. JAMES H. PRATT.
CLOTHES-WRINGING HOOKS.

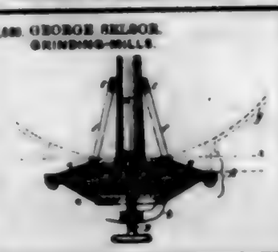
112,075. WM. PRATT. PASTEBOARD-BOXES.



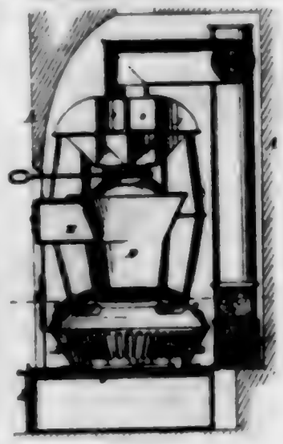
112,076. JOHNSON M. QUIMBY.
A. S. DYER.
DOOR-LOCKS.



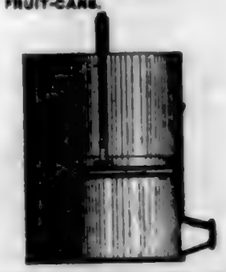
112,077. HENRY G. REED.
MODES OF MANUFACTURING GOLD, SILVER, OR PLATED-WARE.



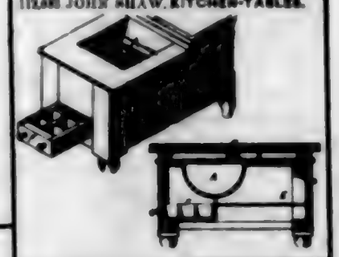
112,078. THOMAS F. ROONEY.
SIFTING-SHOVELS.



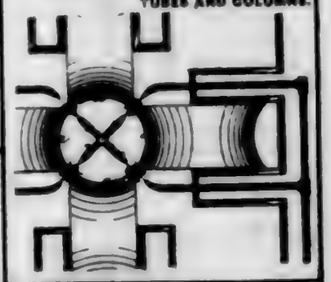
112,079. ORESTES SAMPSON.
COMBINED GANG-PLOWS AND CULTIVATORS.



112,080. GEORGE SELSOR.
GRINDING-MILLS.

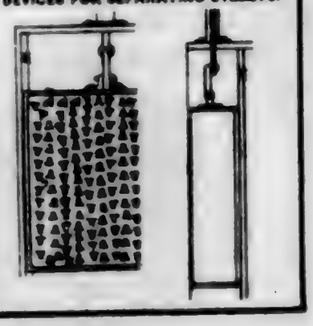


112,081. SAMUEL B. SEXTON
HOT-AIR FURNACES.



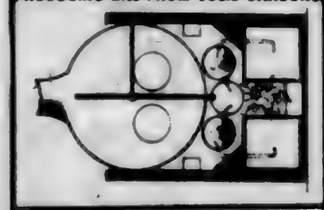
112,082. JOSEPH S. SHANEMAN.
JOSEPH S. HOON.
FRUIT-CANS.

112,083. JOHN SHAW. KITCHEN-TABLES.

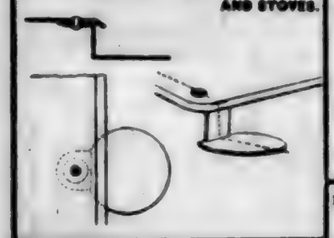


112,084. FREDERICK H. SMITH.
MANUFACTURE OF METAL TUBES AND COLUMNS.

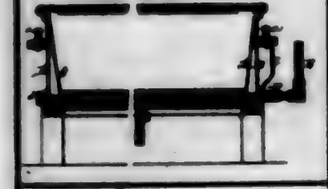
112,085. HOWARD SMITH.
JAMES POTTER.
SPRING BED-BOTTOMS.



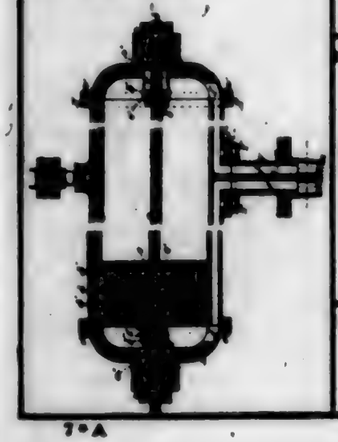
112,086. STEPHEN H. SMITH.
SOLOMON W. YOUNG.
DEVICES FOR SEPARATING EYELETS.



112,087. JAY STEENBERG.
GRAIN-CLEANING MACHINES.

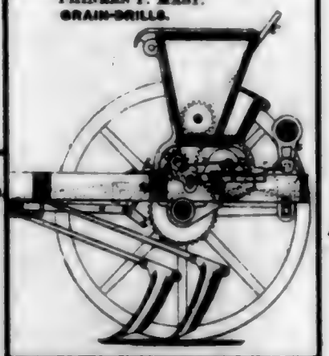


112,088. LEVI STEVENS.
PRODUCING GAS FROM SOLID CARBONS.

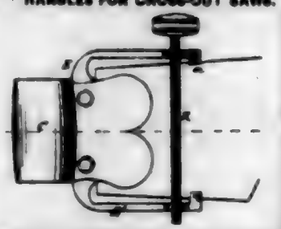


112,089. DAVID STUART.
ATTACHMENTS FOR RANGES AND STOVES.

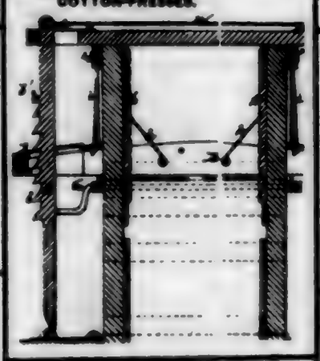
112,090. EZRA H. STUART.
WALTER A. STUART.
CHEESE-VATS.



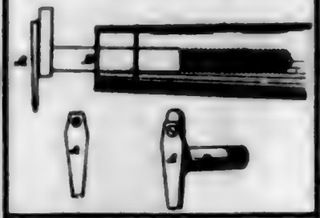
112,091. WILLIAM G. STUART.
LIQUID METERS.



112,092. LEVI R. TARBOX.
MEAT-TENDERERS.



112,093. JOHN H. THOMAS.
PHINEAS P. MANT.
GRAIN-DRILLS.

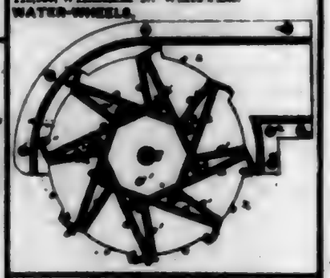


112,094. E. W. TILTON.
HANDLES FOR CROSS-CUT SAWS.

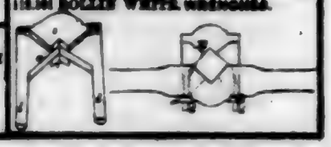
112,095. GABRIEL UTLEY.
COTTON-PRESSES.

112,096. AMOS VREELAND.
WHIFFLETREE-HOOKS.

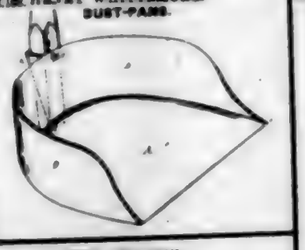
112,097. JOHN WALKER.
PROPORTIONAL SCALES FOR THE CONSTRUCTION OF TOOTHED GEAR.



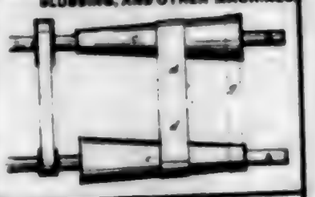
112,098. JOSEPH WARD. WHIFFLETREES.



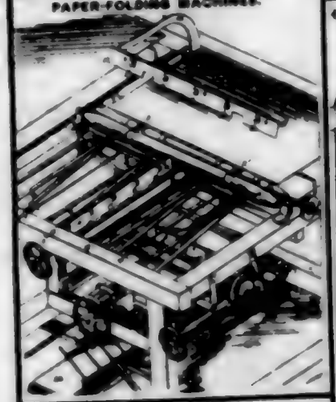
112,099. JAMES WEATHERS.
WHEELS FOR VEHICLES.



112,100. WILLIAM N. WHIPPLE.
WATER-WHEELS.

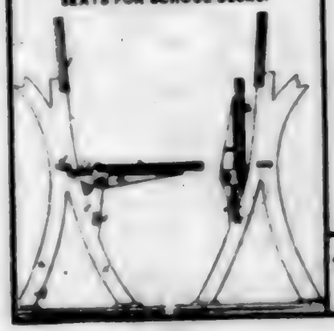


112,101. ROLLIN WHITE. WRENCHES.

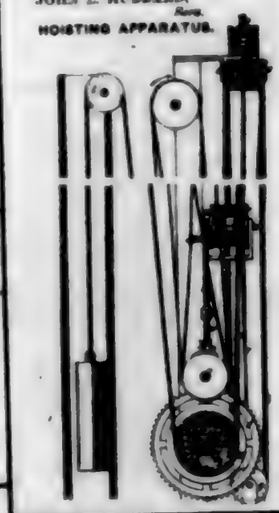


112,102 HENRY WHITTEMORE.
BUST-FANS.

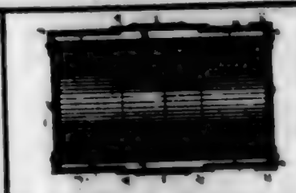
112,103 ALFRED WILCOCK.
RICHARD ROBINSON.
FREDERICK WILCOCK.
DRIVING MECHANISMS FOR ROVING, SLUBBING, AND OTHER MACHINES.



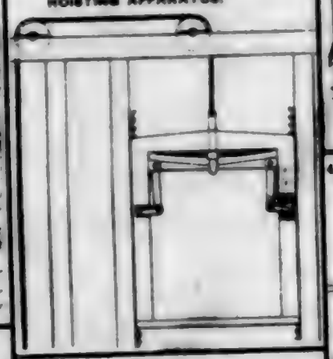
4,266 CYRUS CHAMBERS, Jr.
PAPER-FOLDING MACHINES.



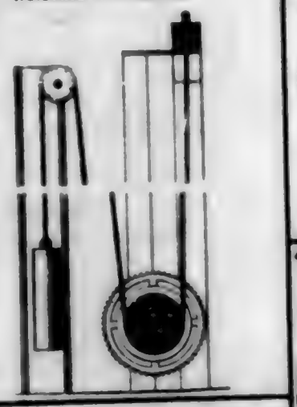
4,267 JOHN H. DUCK.
ELIAS K. WHITCOMB.
PIPES AND FIXTURES FOR WELLS.

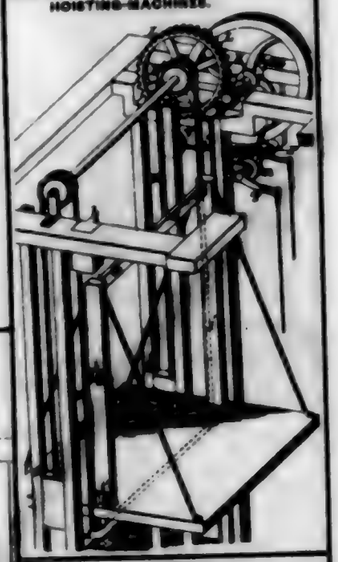


4,268 GEORGE W. HILDRETH.
SEATS FOR SCHOOL-DESKS.

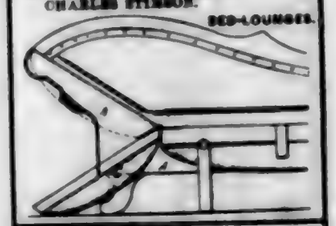


4,269 CHAS. E. OTIS,
JOHN L. HUBBARD,
HOISTING APPARATUS.

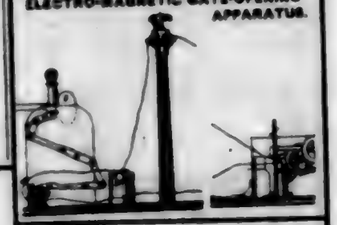




4,270 CHAS. E. OTIS,
JOHN L. HUBBARD,
HOISTING APPARATUS.



4,271 CHAS. E. OTIS,
JOHN L. HUBBARD,
HOISTING APPARATUS.

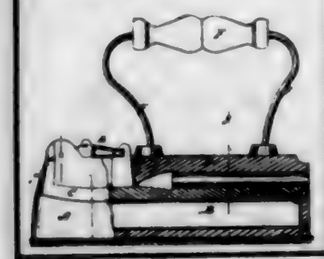


4,272 HENRY J. BREDT.
HOISTING-MACHINES.

4,273 JAMES SEYMOUR, *Ex Adm'r of* Wm. H. Colley, *deceased*.
WILLIAM H. COOLIDGE.
CHARLES STIMSON.
BED-LOUNGES.

4,274 WILLIAM ROBINSON.
ELECTRO-MAGNETIC GATE-OPENING APPARATUS.

4,275 RUSSELL & MOORE MANUFG. CO.
SAW-FRAMES.



4,276 HENRY G. PORTER.
BARRELS.

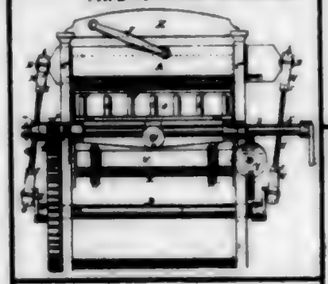
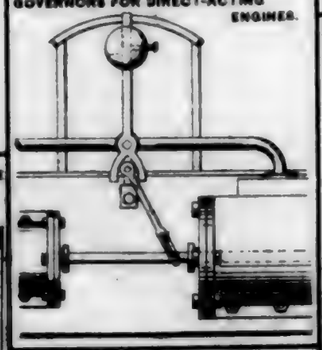
112,418. CHARLES B. CHOATE.
MACHINES FOR CUTTING SHEET METAL

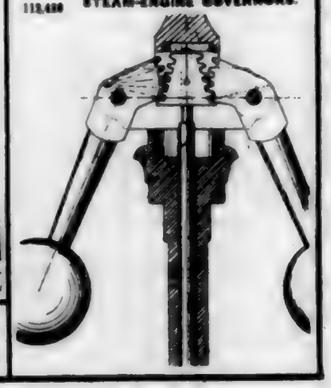
112,419. WILLIAM CLEVELAND.
BIT-BRACES.



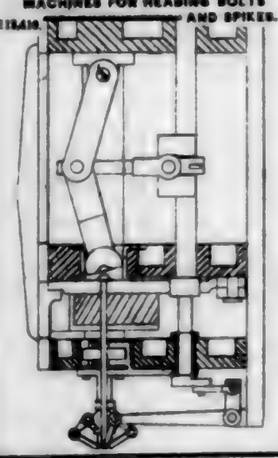
LAFAYETT BARNUM. 112,406.
ICE-CUTTING MACHINES.



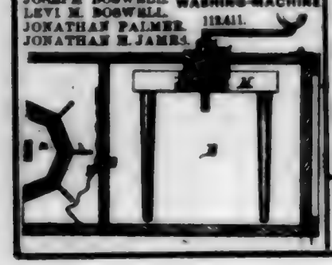
112,409. THOMAS J. BIGGER.
MANUFACTURE OF ICE.



112,414. SAMUEL BROWN.
PAPER-CUTTING MACHINES.

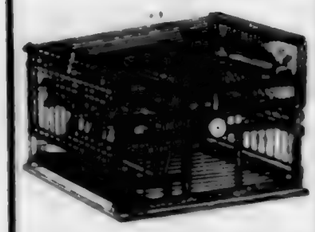


112,415. A. S. CAMERON.
GOVERNORS FOR DIRECT-ACTING ENGINES.

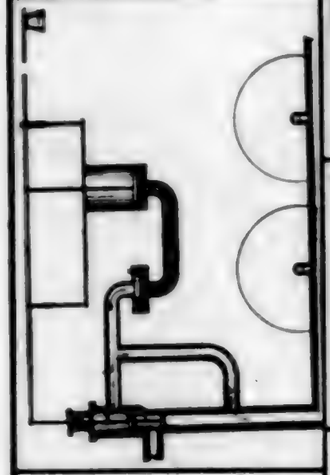


112,416. CHAS. A. CONDE.
STEAM-ENGINE GOVERNORS.

REINHOLD BORKLEN.
MACHINES FOR HEADING BOLTS AND SPIKES.
112,410.

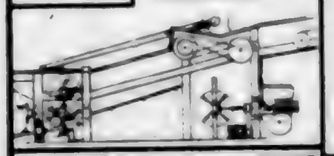


JOSEPH BOSWELL.
LEVI M. BOSWELL.
JONATHAN PALMER.
JONATHAN M. JAMES.
WASHING-MACHINE
112,411.

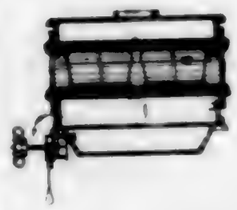


A. S. CAMERON.
GOVERNORS FOR DIRECT-ACTING ENGINES.
112,414.

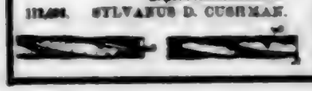
112,431. JOHN CREW CRAFT.
CARPET-CLEANING MACHINES.



112,432. DANIEL CROSBY.
STEAM-REGULATORS FOR PAPER-DRIER



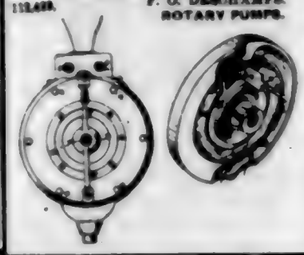
112,433. GEORGE M. CRUICKSHANK.
METALLIC PISTON AND VALVE-ROD PACKINGS.



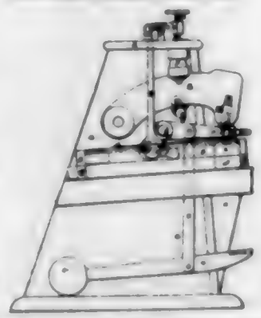
112,434. JOHN CULMAN
GRAIN-THRASHING AND SEPARATING-MACHINE

112,435. DAVID CURTIS. COOKING-STOVE

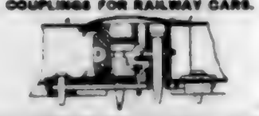
LIGHTNING-RODS.
112,436. SYLVANUS D. CUSHMAN.



112,437. MOSE GRIDGES. PATRICK DAILY.

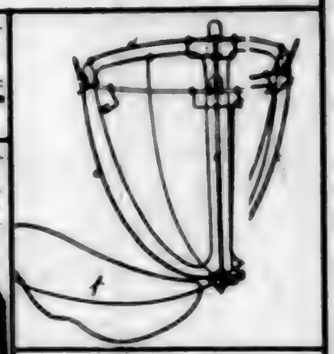


112,438. WILLIAM DALE.
COVERS FOR OPENINGS IN SIDEWALKS.



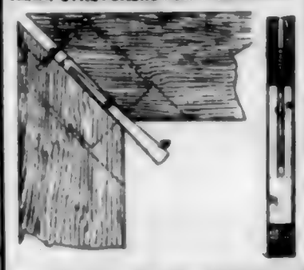
112,439. F. O. DESCHAMPS.
ROTARY PUMPS.

112,440. JAMES DODGE.
MACHINES FOR CUTTING FILES

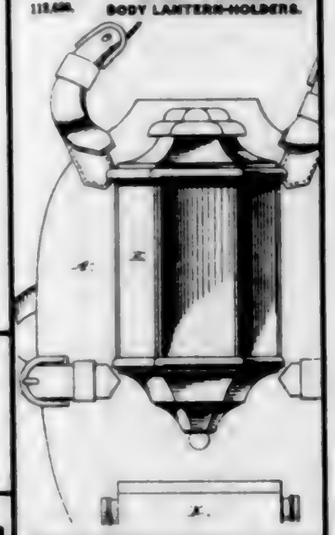


112,441. HENRY DÜRR, Hartford, Connecticut, assignor to himself and Charles Goodall, of Brooklyn, New York.
COUPLINGS FOR RAILWAY CARS.

TOBACCO-PIPES. PATRICK J. DWYER.
112,442.

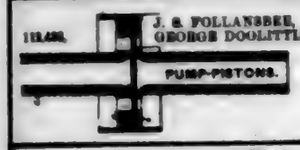


ALBERT P. EASTMAN.
112,443. BASKETS FOR HOUSE-PLANTS.

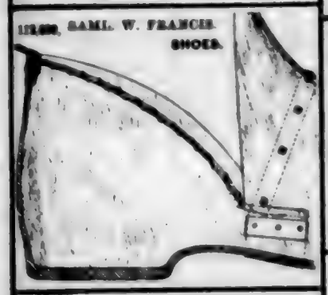


112,444. MILO A. ELLIOTT.
SULKY-PLOWS.

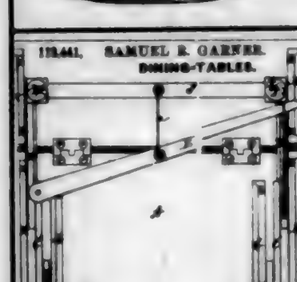
JAMES FAIRMAN
112,445. STRETCHERS FOR PAINTINGS.



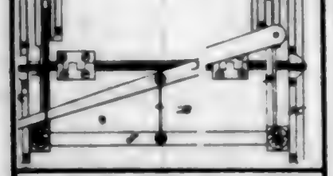
SAML. C. FESSENDEN.
112,446. BODY LANTERN-HOLDERS.



A. L. FINCH.
112,447 STOVE-LEGS.

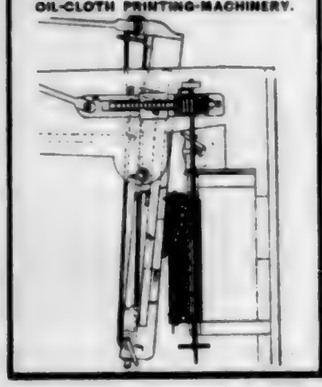


112,448. J. S. FOLLANSBEE, GEORGE DOOLITTLE.
PUMP-PISTONS.

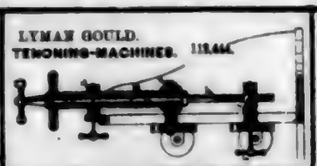


112,449. SAML. W. FRANCIS.
SHOES.

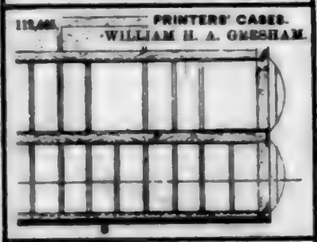
112,450. GUARD-FINGERS FOR HARVESTERS.
GEORGE FYFE.
CHESTER HARD.



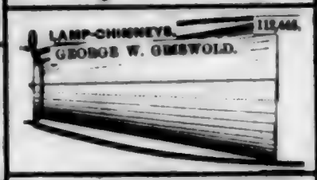
112,451. SAMUEL R. GARNER.
DINING-TABLES.



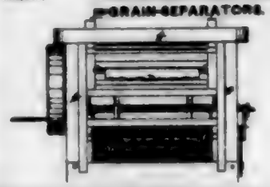
M. BOLAND GEARY. STEP-LADDERS.
112,452.



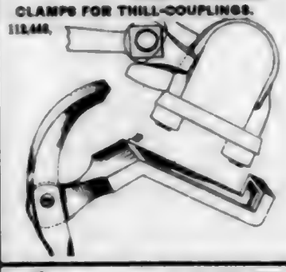
112,453. EBENEZER A. GOODIN.
OIL-CLOTH PRINTING-MACHINERY.



LYMAN GOULD.
112,454. TENONING-MACHINES.

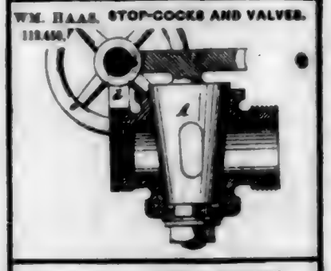


112,455. PRINTERS' CASES.
WILLIAM H. A. GRESHAM.



112,456. LAMP-CHIMNEYS.
GEORGE W. GRISWOLD.

112,457. PHILANDER GRISWOLD.
GRAIN-SEPARATORS.



JOHN W. GUIDER.

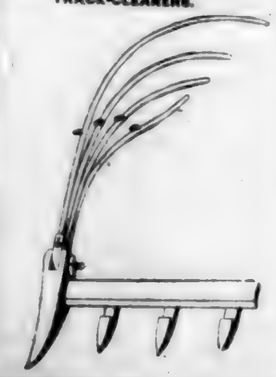
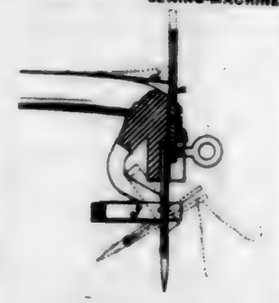
PAPER-COLLARS.

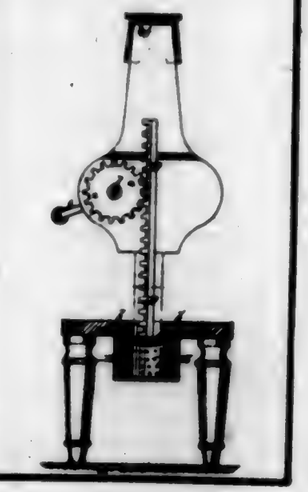
112,572 JOHN S. EVERITT.
CHARLES H. AVERY.
HEAD-BLOCKS FOR SAW-MILLS.



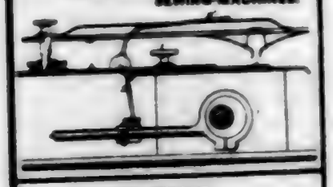
112,573 ZEBULON C. FAVOR.
ELEVATORS.



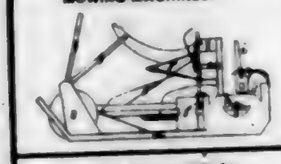
112,574. LYMAN FAY.
NUT-LOCKS.



112,576. HENRY FELLOWS.
TRACK-CLEARERS.

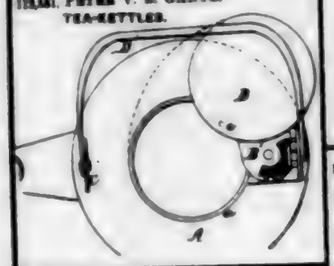


112,576. GEORGE M. FRARY.
NEEDLES AND HOLDERS FOR SEWING-MACHINES.



112,577. CHARLES ADOLPH FREDERICK.
POTATO-MASHERS.

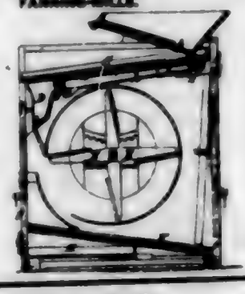
112,578. H. W. FULLER.
TUCK-CREASERS FOR SEWING-MACHINES.



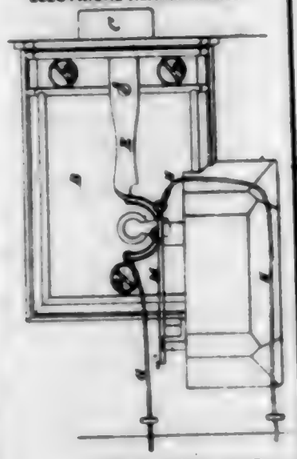
112,579. SOLOMON FULLER.
SEWING-MACHINES.

112,580. JAMES GALLATIN, Jr.
UNIVERSAL MANDRELS.

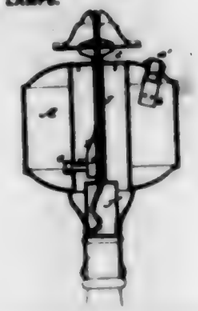
112,581. PETER V. B. GARTZ.
TEA-KETTLES.



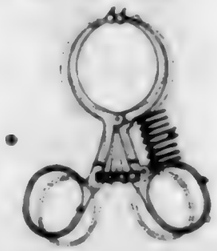
112,582. THOMAS GARRICK.
HARVESTER-CUTTERS.



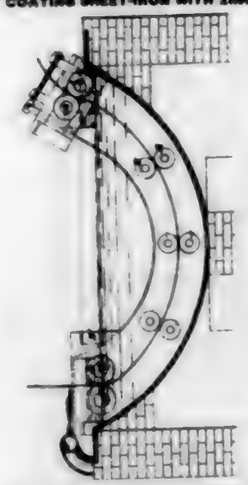
112,583. CHARLES E. GLADDING.
PLASTER-SCREWS.



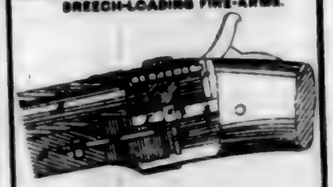
112,584. REUBEN GIBSON.
FANNING-MILLS.



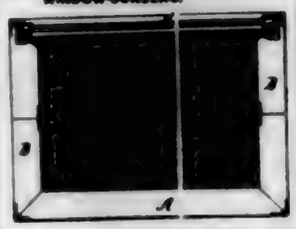
112,585. FERJUS GIRARD.
ELECTRICAL ALARM-LOCKS.



112,586. HENRY J. GOFF.
LAMPS.

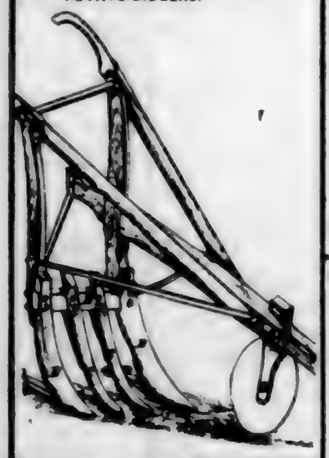


112,587. WILLIAM H. GRAY.
COMB-TAIL HOLDERS.

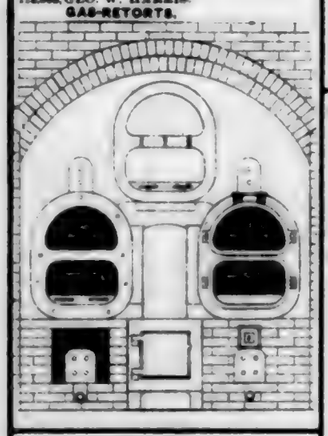


112,588. JOHN D. GREY.
COATING SHEET-IRON WITH ZINC.

112,589. HENRY HAMMOND.
BREECH-LOADING FIRE-ARMS.



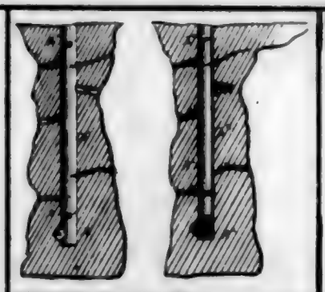
112,590. JOHN HANCOCK, Jr.
WINDOW-SCREENS.



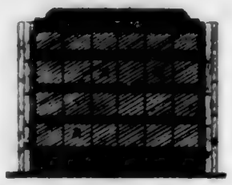
112,591. AARON S. HARLAN.
ROTARY STEAM-ENGINES.

112,592. WILLIAM D. HARRELL.
POTATO-DIGGERS.

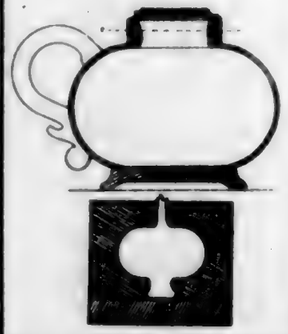
112,593. GEO. W. HARRIS.
GAS-RETORTS.



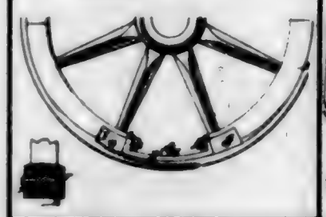
112,594. GEORGE HAYES.
SKY-LIGHTS, CONSERVATORIES, AND OTHER GLAZED STRUCTURES.



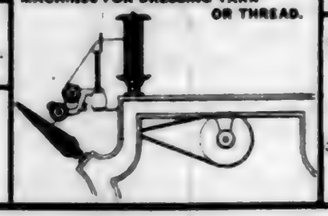
112,595. SHELBY WADAY HELM.
MEDICAL COMPOUNDS FOR TREATING BRONCHIAL AND LUNG DISEASES.



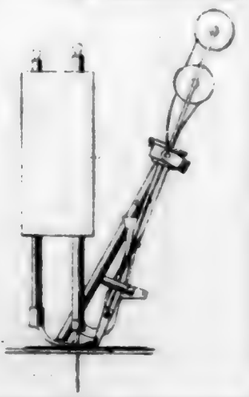
112,596. JOHN R. HILL.
OIL-WELL DRILLING.



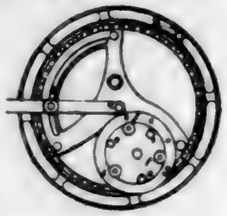
112,597. ARTEMAS HOLDREDGE.
BENJAMIN F. HARRINGTON.
HENRY H. HARRINGTON.
CHEESE-HOOPS.



112,598. JONA. J. HOYT.
JOHN E. CRANE
CONSTRUCTION OF LAMPS.



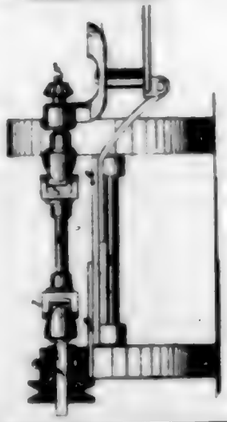
112,599. ANTHONY HUDDLER.
SECURING WHEEL-TIRES.



112,600. GILMAN JAQUITH.
MACHINES FOR DRESSING YARN OR THREAD.

112,601. ALBERT, W. JOHNSON.
EMBROIDERING ATTACHMENTS FOR SEWING-MACHINES.

112,602. WM. G. KENYON.
HAY-TEDDERS.



112,603. O. S. KING.
WASHING-MACHINES.

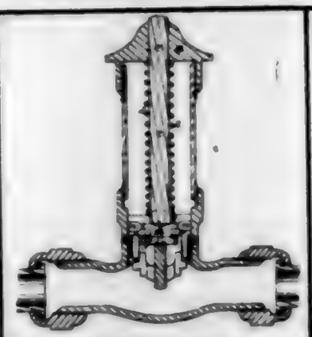
112,604. MOSES KINSEY.
SKATES.

112,605. DAVID R. KENYON.
HARVESTER-RAKES.

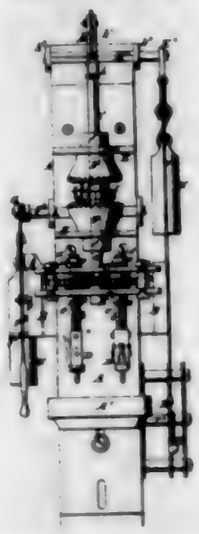
112,606. GEORGE T. LEWIS.
PROCESSES OF REFINING AND WHITENING THE PRODUCT FROM SULPHURETS OF LEAD AND ZINC.

112,607. GEORGE T. LEWIS.
REFINING AND WHITENING THE PRODUCT FROM ORES OF LEAD AND ZINC.

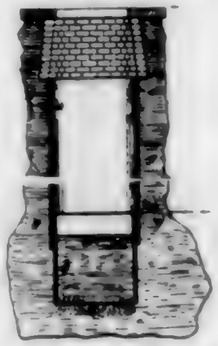
112,608. GEORGE T. LEWIS.
MANUFACTURE OF CARBONATE OF LEAD, &c.



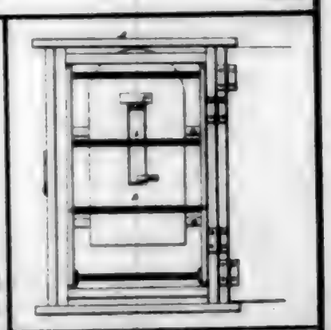
112,609. DE MARCUS MADDEN.
BASE-BURNING STOVES.



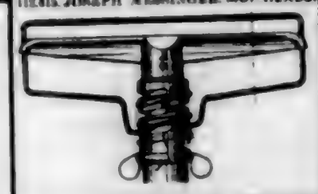
112,610. THOMAS MALONEY.
MANUFACTURE OF BOTTLED MINERAL WATER.



112,611. STEWART C. MARSH.
SAFETY-VALVES.

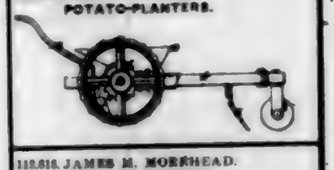


112,612. HENRY MARTIN.
MACHINES FOR CUTTING SCREW-THREADS ON BOLTS.

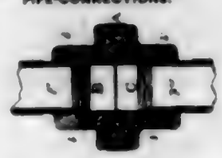


112,613. WILLIAM MASON.
MODES OF MAKING WELLS.

112,614. S. T. McDOUGALL.
COMBINED CLOTHES-RECEPTACLES, IRONING-BOARDS, AND DRIERS.

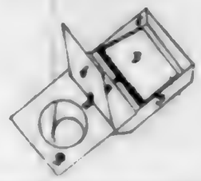


112,615. JOSEPH MESSINGER. MOP-HEADS.



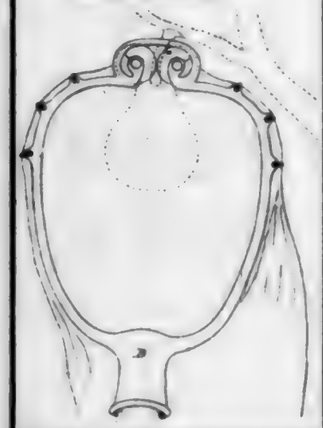
112,616. GEORGE W. MILES.
TREADLES FOR SEWING AND OTHER MACHINES.

112,617. JOHN G. MILLS.
POTATO-PLANTERS.

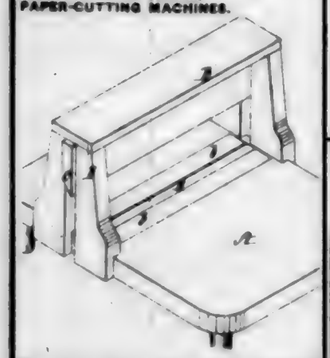


112,618. JAMES M. MORRHEAD.
PIPE-CONNECTIONS.

112,619. JEREMIAH MURPHY.
BURGLAR-ALARM DRAWERS.



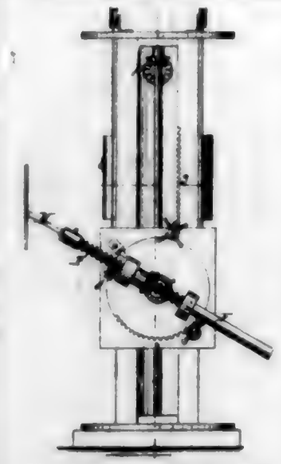
112,620. SOLOMON D. NEWBRO.
EARTH-CLOSETS.



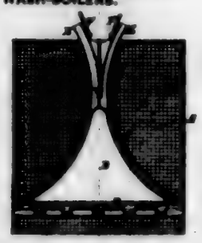
112,621. AARON B. NOTT.
MODES OF ATTACHING PIPES TO SINKS, DRAINS, &c.

112,622. CORNELIUS OSTRANDER.
FRUIT-GATHERERS.

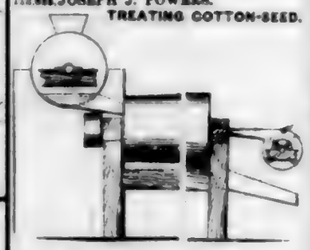
112,623. CHARLES PAINE.
PAPER-CUTTING MACHINES.



112,624. JASON J. PALMER.
FRANKLIN G. PALMER.
GLOBE-HOLDERS AND COOLERS COMBINED, FOR VAPOR-BURNERS.

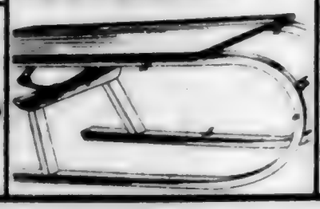


112,625. CHARLES W. PEIRCE, Jr.
SKIRTS.

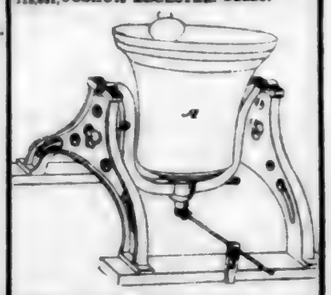


112,626. PARLEY I. PERRIN.
JOSEPH L. HEWES.
MACHINES FOR TAPPING BOILERS.

112,627. CHARLES W. POWELL.
WASH-BOILERS.

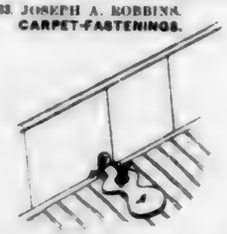


112,628. JOSEPH J. POWERS.
TREATING COTTON-SEED.

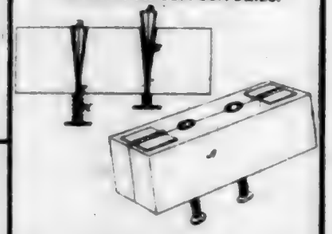


112,629. AMOS RANK.
FINGER-BEAMS FOR HARVESTERS.

112,630. AMOS RANK. SLEIGHS.

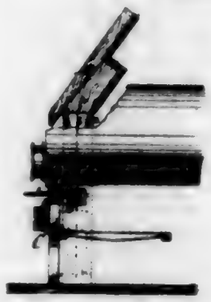


112,631. JOSHUA REGESTER. BELLS.

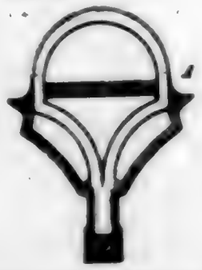


112,632. SARAH AMANDA REYBERT.
HAIR-TONICS.

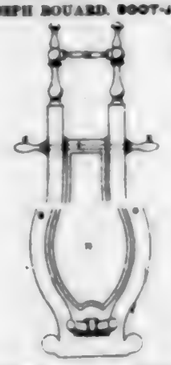
112,633. JOSEPH A. ROBBINS.
CARPET-FASTENINGS.



112,634. JOSEPH A. ROBBINS.
MOLDS FOR SUPPOSITORIES.

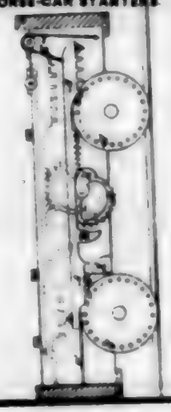


112,635. CHAS. H. ROBINSON.
SAFETY-HASPS OR LATCHES.

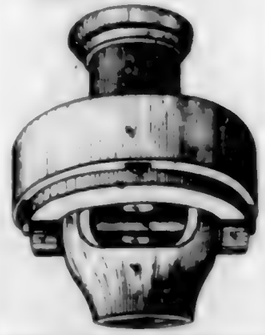


112,636. ALEXANDER RODGERS, BEAU TARRANT.
MACHINES FOR FEEDING FUEL TO FURNACES.

112,637. MARK ROSENWAX.
GAS-BURNERS.



112,638. JOSEPH BOUARD. BOOT-JACKS.



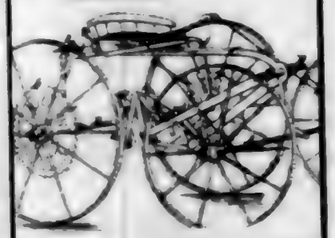
112,639. E. A. SCHOELLER.
WINDOWS FOR RAILWAY-CARS.

112,640. HENRY SCHREIVER.
HORSE-CAR STARTERS.

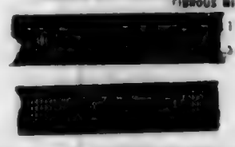
112,641. FREEDOM G. SHEPARD.
SHAFT-COUPLINGS.

112,642. NICHS. H. SHIPLEY.
SEALING CANS AND OTHER VESSELS FOR PRESERVING FRUITS, MEATS, &c.

112,643. CHARLES ELDRIDGE SMITH.
SHUTTLES FOR LOOMS.



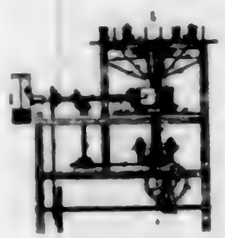
112,644. CHAS. S. STEAD
SKY-LIGHTS.



112,645. BENJAMIN M. SPENCER.
BOILER-FLUE BRUSHES.

112,646. MANASSA STAUDT.
VELOCIPEDES.

112,647. CHASE A. STEVENS.
PACKING FROM ASBESTUS AND OTHER FIBROUS MINERALS.

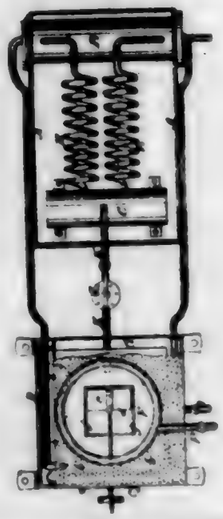


112,648. CHASE A. STEVENS.
FIBROUS MINERAL PACKINGS FOR JOURNALS, BEARINGS, &c.

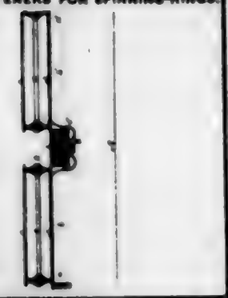
112,649. CHASE A. STEVENS.
TREATING ASBESTUS AND OTHER MINERAL FIBERS FOR USEFUL PURPOSES.

112,650. CHASE A. STEVENS.
TREATING ASBESTUS AND OTHER FIBROUS MINERALS.

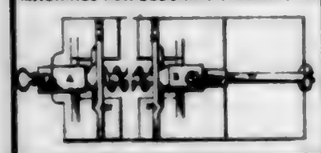
112,651. CHASE A. STEVENS.
ISAAC LINDSLEY.
MACHINERY FOR FORMING PACKING FROM ASBESTUS AND OTHER FIBROUS MATERIALS.



112,652. LEONARD S. TAYLOR.
STIRRUPS FOR RIDING-SADDLES.

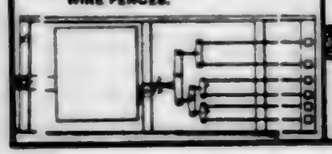


112,653. THOMAS TAYLOR.
FERTILIZERS.



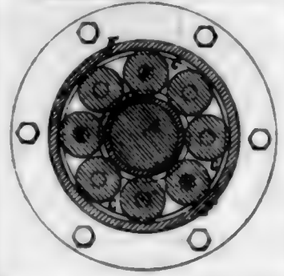
112,654. A. B. TRIPLER.
APPARATUS FOR MAKING ICE AND REFRIGERATING.

112,655. CHARLES EDWARD TROWBRIDGE.
FASTENERS FOR SPINNING-RINGS.

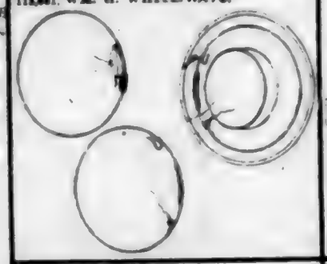


112,656. GEORGE VINCENT.
MACHINES FOR BLOCKING RIBBONS, &c.

112,657. C. W. WADSWORTH.
CARL GULLBERG.
ATTACHING THE HAIR-SPRINGS OF WATCHES.

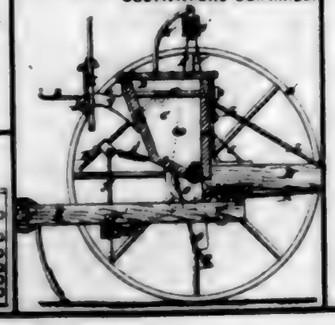


112,658. CHAS. A. WAKEFIELD.
WIRE FENCES.

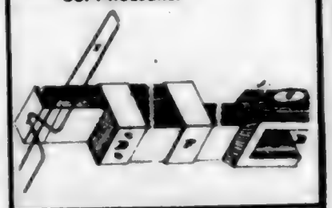


112,660. JOHN H. WELSH.
REFRIGERATORS.

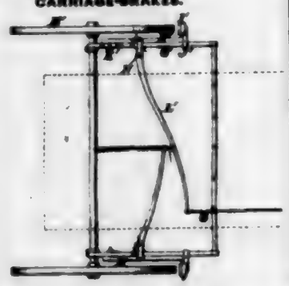
112,662. HENRY P. WESTCOTT.
ANTI-FRICTION JOURNAL-BOXES.



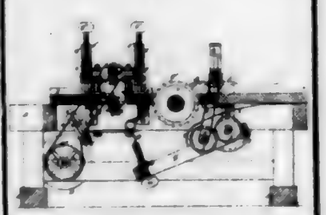
112,661. WM. H. WHITE. HATS.



112,663. WM. B. WHITNEY
CHILD'S CARRIAGES.

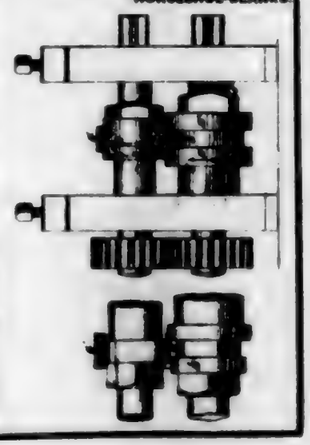


112,664. WYMAN WIGHT.
BROADCAST SEEDERS AND CULTIVATORS COMBINED.

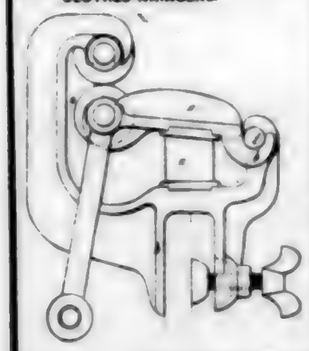


112,665. WM. H. WILLIAMS.
COPY-HOLDERS.

112,666. AUGUST WINCK.
CARRIAGE-BRAKES.



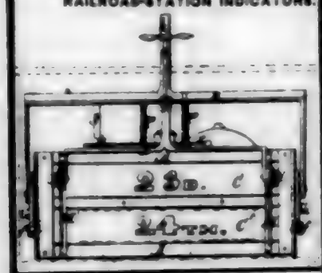
112,667. GEORGE F. WOOLSTON.
BLIND-SLAT MACHINES.



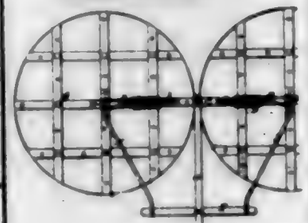
112,667. PIERCE W. YARRELL.
WATER-WHEELS.

112,668. WM. ACHESON.
ROLLS FOR FORMING HORSESHOE-BLANKS.

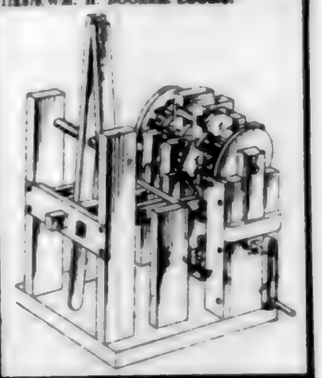
112,669 AUGUST ALBRECHT.
CLOTHES-WRINGERS.



112,670 LAUREN B. ARNOLD.
VENTILATING MILK-CANS.



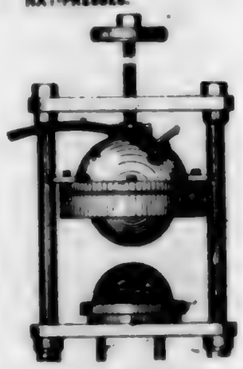
112,671 JOSEPH B. BAILEY.
BENCH-PLANES.



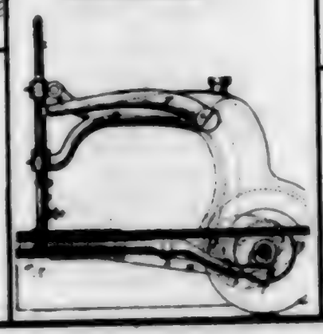
112,672 G. W. ALEXANDER.
RAILROAD-STATION INDICATORS.

112,673 JOHN W. BARTON.
THOMAS HOLMES.
ROTARY HARROWS.

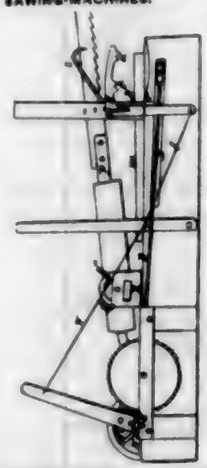
112,674 WM. H. BOOZER. LOOMS.



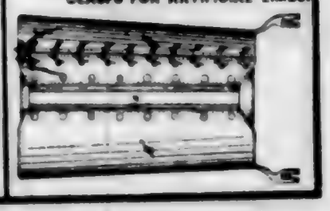
112,675 MYRON T. BOULT
CARVING-TOOLS.



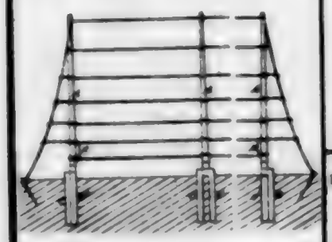
112,676 M. P. BRAY. HOOP-SKIRTS.



112,677. SAMUEL BRATTY.
HAT-PRESSES.

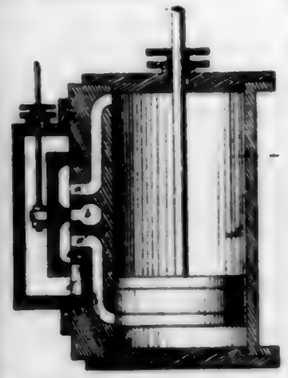


112,678. JOSEPH BRENOR.
SEWING-MACHINES.

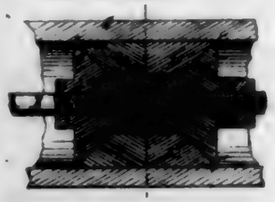


112,679 GEORGE W BRAYMER.
SAWING-MACHINES.

112,680 S. F. BURD.
J. F. DENNISTON.
CLASPS FOR ARTIFICIAL LIMBS.

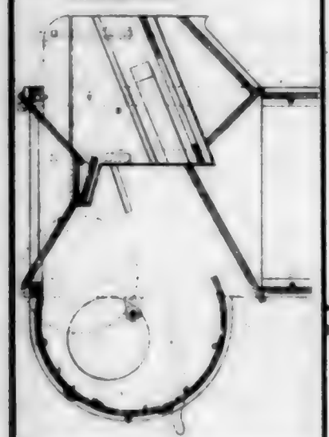


112,681 WILLIAM ALTICK.
P. P. OEMES.
FENCES.



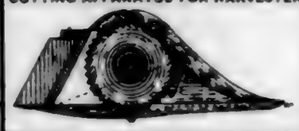
112,682 CHAS. B. ANDERSON.
DOOR-CHECKS.

112,684 A. S. CAMERON.
STEAM-VALVES.

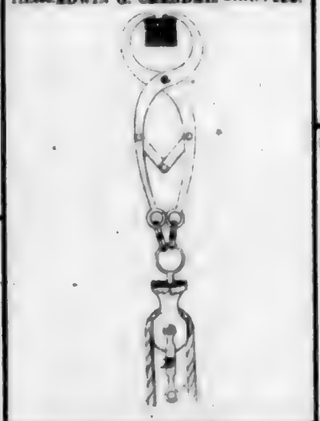


112,685 A. S. CAMERON.
PISTON-PACKINGS.

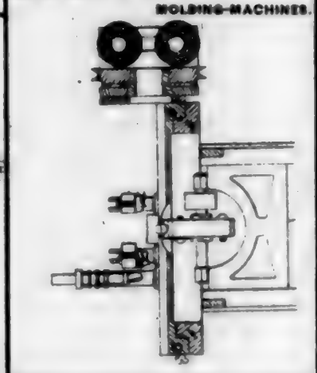
112,686 DAVID H. CLARK.
HENRY WINSON.
FURNITURE-PADS.



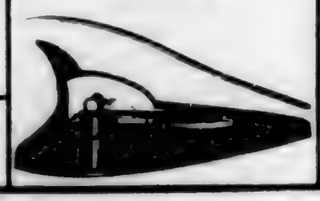
112,687 G. E. CLARKE.
FANNING-MILLS.



112,688 ROBERT LIVINGSTON COREY.
ROTATING CYLINDER-ENGINES.

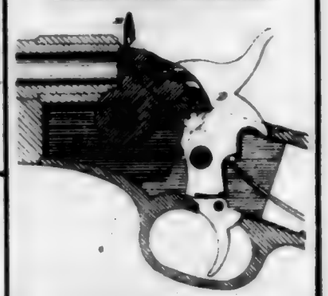


112,689 GEORGE W. COOK.
FRANCIS M. DUNCAN.
CUTTING APPARATUS FOR HARVESTER

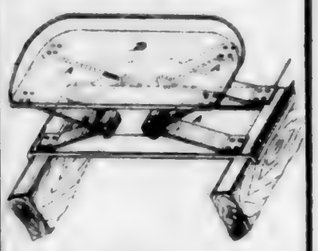


112,690 EDWIN G. CRANDAL. GRAPPLES.

112,691. JAMES H. CULVER.
MOLDING-MACHINES.

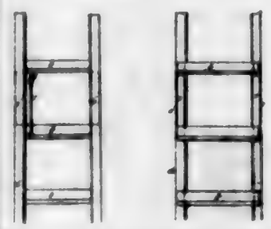


112,692 HENRY CUTLER.
HARVESTER-CUTTERS.



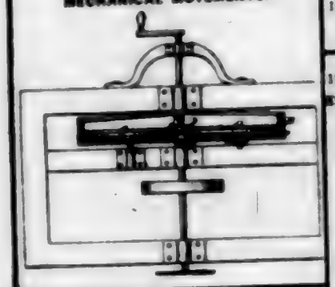
112,693. ELLWOOD DAVIS.
JACOB M. STILES.
LOCKING STOP-COCKS.

112,694 WILLIAM C. DODGE.
PHILIP T. DODGE.
BREECH-LOADING FIRE-ARMS.

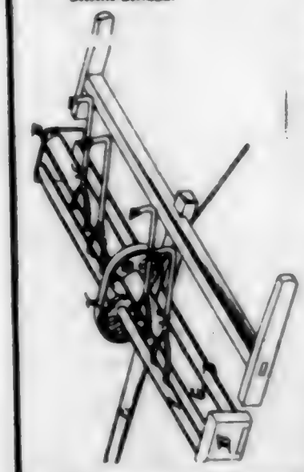


112,695 W. P. ELAM.
SPRING-SEATS FOR WAGONS.

112,696. ROSCOE G. ELDER.
CHILDREN'S CARRIAGES.

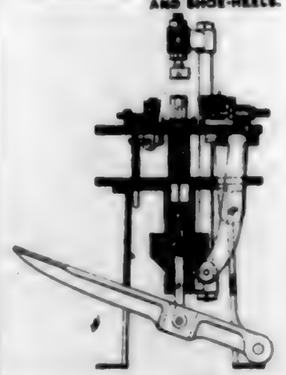


112,697. GEORGE HENRY ELLIS
LADDERS.



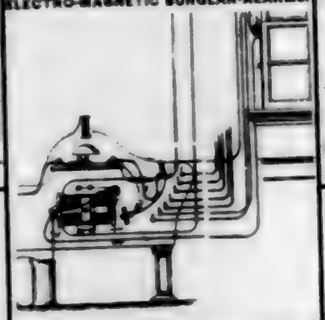
112,698. WILLIAM ENNIS.
FURNACES FOR TREATING ORES, &c.

112,699. WM. A. PENN.
MECHANICAL MOVEMENTS.

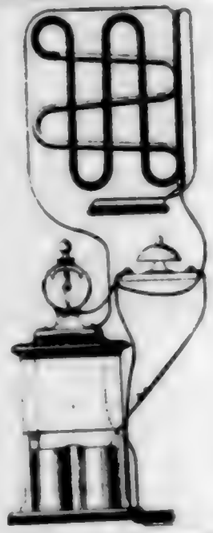


112,700. SILAS N. GALLUP.
GRAIN-DRILLS.

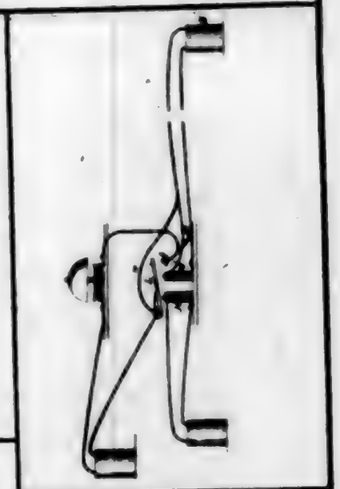
112,701. HENRY GETTY.
ALE OR BEER-COCKS.



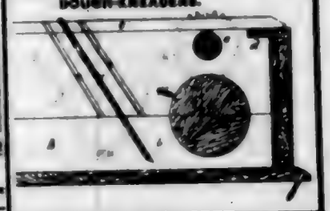
112,702. CHARLES W. GLIDDEN
MACHINES FOR MAKING BOOT AND SHOE-HEELS.



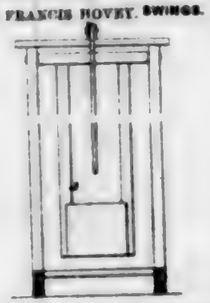
112,703. E. A. GOODES.
STAINING GLASS.



112,704. W. B. GUERNSEY.
ELECTRO-MAGNETIC BURGLAR-ALARMS.



112,705. W. B. GUERNSEY.
ELECTRO-MAGNETIC BURGLAR-ALARM



112,706. W. B. GUERNSEY.
ELECTRO-MAGNETIC BURGLAR-ALARMS.

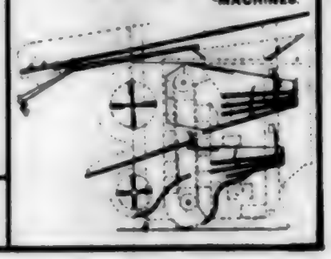
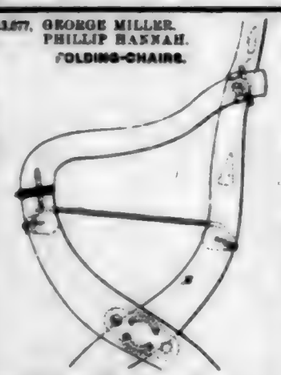
MACHINES FOR THREADING BOLTS.

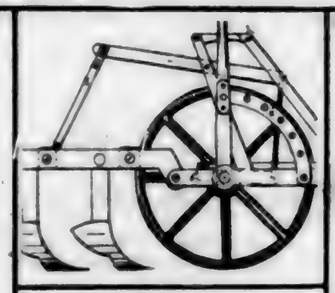
113,073. FR. MATHUSHEK. PIANOS.



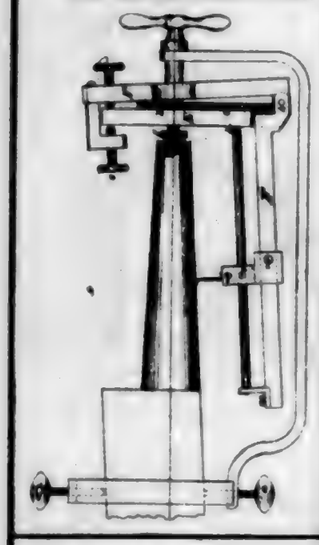
113,074.
FR. MATHUSHEK.
PIANO-FORTE ACTIONS.



113,075. EDGAR McCONNELL.
CHISELS FOR MORTISING-MACHINES.

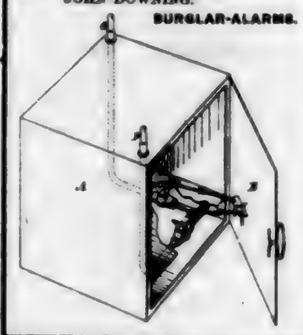


113,076. CURTIS MILLER.
SEPARATORS FOR THRASHING-MACHINES.



113,077. GEORGE MILLER.
PHILLIP HANNAH.
FOLDING-CHAIRS.

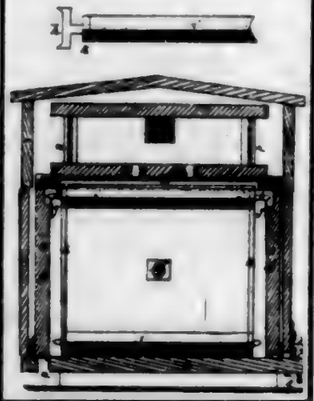
113,078. ARTHUR F. MOORE.
MACHINES FOR TURNING AXLES.



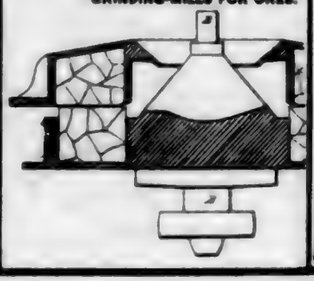
113,079. GEORGE MOTLEY.
MAKING FLOUR.

113,080. RICHARD M. MOYLE.
CATARRHAL DOUCHES.

113,081. JOHN MURRY.
GANG-PLOWS.

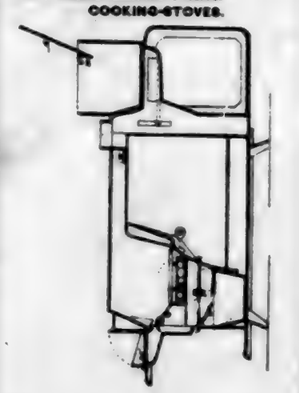


113,082. JOHN T. MYGATT.
JOHN DOWNING.
BURGLAR-ALARMS.

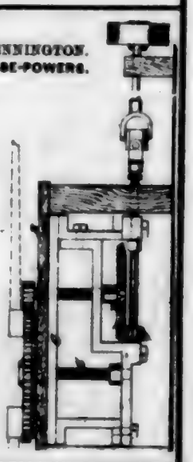


113,083. JOTHAM NEWTON.
COMPOSITION-FUELS.

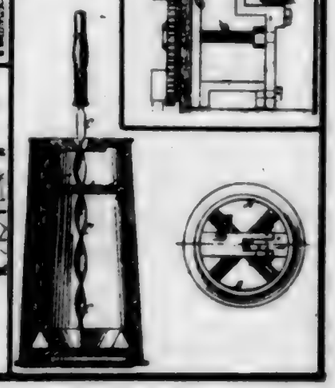
113,084. PHILIP NICOLLE. BEE-HIVES.



113,085. JACOB S. NISWANDER.
GRINDING-MILLS FOR ORES.

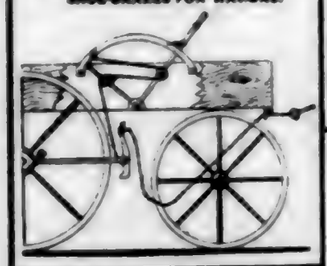


113,086. DANL. ELDON PARIS.
COOKING-STOVES.



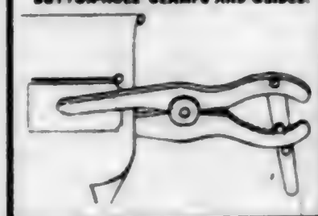
113,087. ROBERT H. PATON.
REVERSIBLE SETTEES.

113,088.
THOMAS D. PENNINGTON.
HORSE-POWERS.

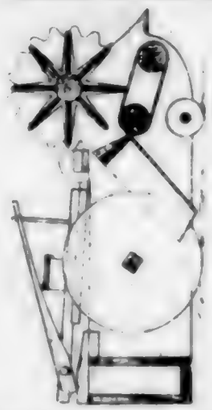


113,089.
GEORGE S. PERFATER.
CHURNS.

113,090. JOHN J. PRATT.
ELECTROPLATING LETTERS AND NUMBERS ON METALLIC PLATES FOR SIGNS.

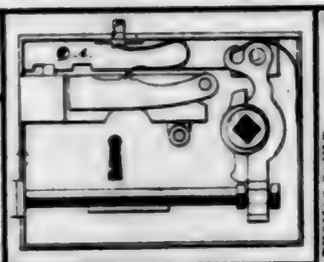


113,091. ABRAHAM QUINN.
SHOE-BRAKES FOR WAGONS.

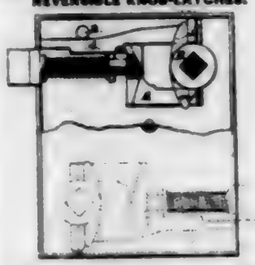


113,092. JOHN RANCEVAN.
RUNNING-GEARS FOR CARRIAGES.

113,093. LOYAL REDING.
BUTTON-HOLE CLAMPS AND GUIDES.



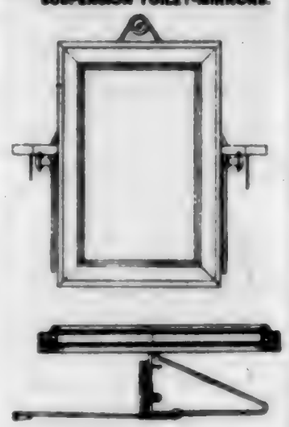
113,094. BENJAMIN M. BEEVER.
MACHINES FOR PULLING FLAX.



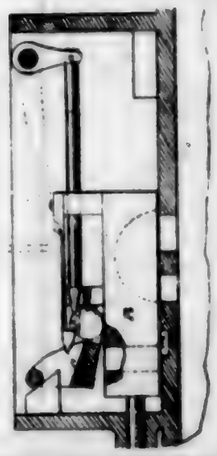
113,095. JOHN RICH.
CHUCKS FOR LATHES.

113,096. HENRY M. RITTER.
REVERSIBLE KNOB-LATCHES.

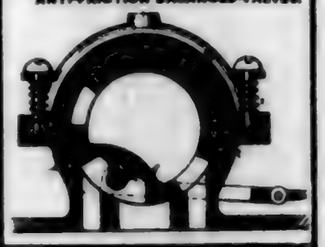
113,097. HENRY M. RITTER.
REVERSIBLE KNOB-LATCHES.



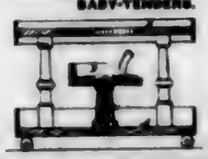
113,098. HAMILTON ROBEY.
PLOWS.



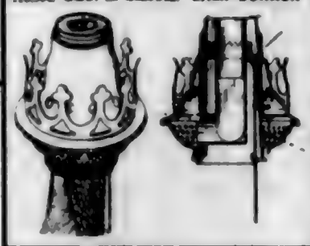
113,099. ELIJAH H. RUSSELL.
SOLDERING SPIRAL BANDS.



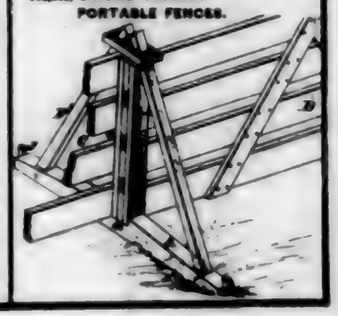
113,100. RANDOM T. SARGENT.
SUSPENSION TOILET-MIRRORS.



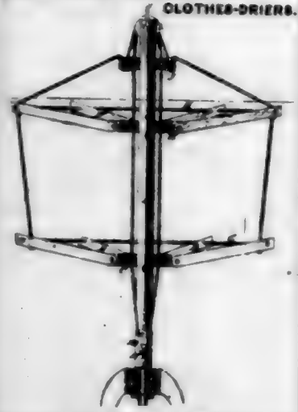
113,101. THOMAS SAULT.
CUT-OFF ATTACHMENTS TO SLIDE-VALVES.



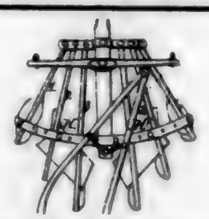
113,102. WILLIAM SIEFERT.
ANTI-FRICTION BALANCED-VALVES.



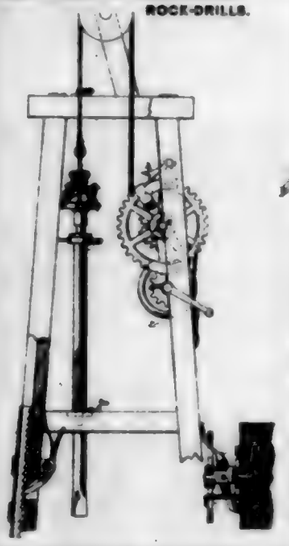
113,103. SAMUEL M. SIMONDS.
BABY-TENDERS.



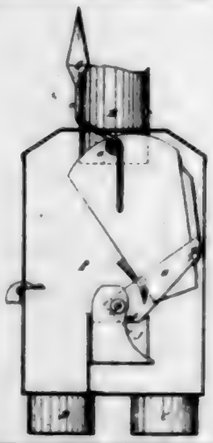
113,104. GEO. L. SMITH. LAMP-BURNER



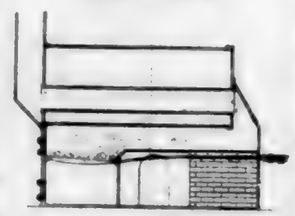
113,105. FRANK SPROUL.
PORTABLE FENCES.



113,106. AUGUST STECHSCHULT.
CLOTHES-DRIERS.

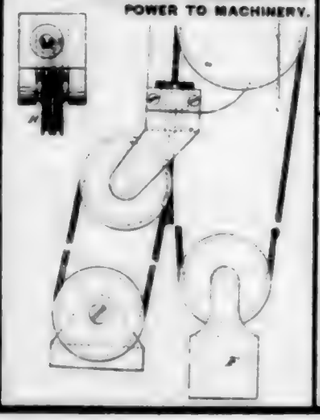


113,107. JAMES M. STEPHENSON.
ROCK-DRILLS.

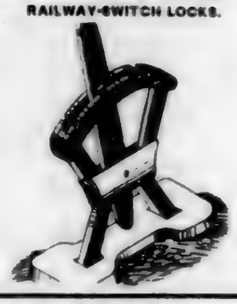


113,108. EDWARD STEWART
AUTOMATIC WATER-SPOUT CUT-OFF

113,109. MICHAEL STOLL.
CULTIVATORS.



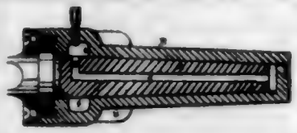
113,110. URIAH B. STRIBLING
BOILER-FURNACES.



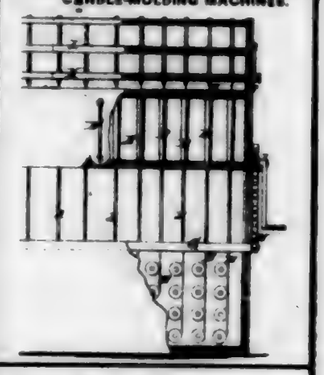
113,111. COLUMBUS P. STURGIS.
SHEET-METAL FRUIT-CANS.

113,112. WM. H. THORNE.
APPARATUS FOR TRANSMITTING POWER TO MACHINERY.

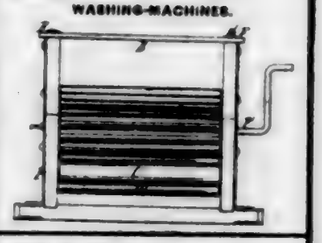
113,113. ARCHIBALD THOMSON.
RAILWAY-SWITCH LOCKS.



113,114. FRANCIS B. TORREY.
THE MANUFACTURE OF COMPOSITION-ROLLER BUSHINGS.

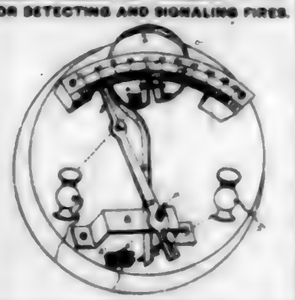


113,115. JACOB VAN NORMAN.
FORCING LIQUIDS.



113,116. ERNEST VON JEINSEN.
JAMES MONROE McDONALD.
AXLES AND AXLE-BOXES FOR VEHICLES.

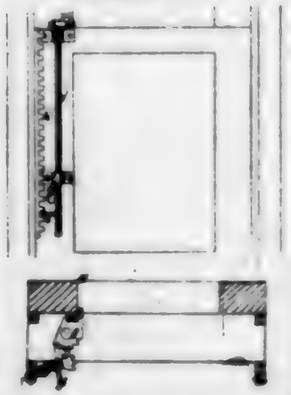
113,117. JOB. WALES.
CANDLE-MOLDING MACHINES.



113,118. GEO. S. WALKER.
WASHING-MACHINES.

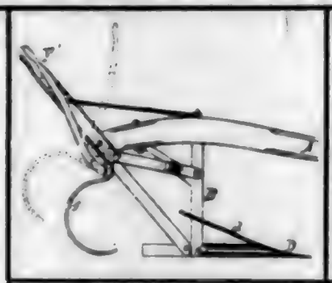
113,119. EDMUND R. WARE.
MEN'S GAITERS.

113,120. WILLIAM B. WATKINS. MEANS FOR DETECTING AND SIGNALING FIRES.

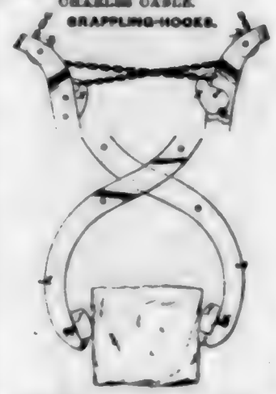


113,121. BENJAMIN WEBB. HORSE-RAKES.

113,122. CHARLES H. WHITE. BUTTER-TUBS.



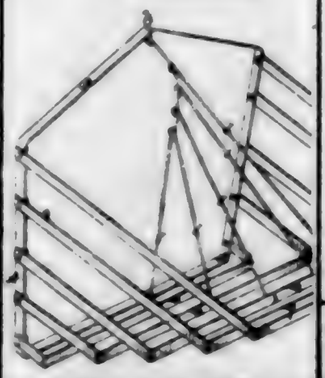
113,123. B. M. WHITING. SASH-HOLDERS.



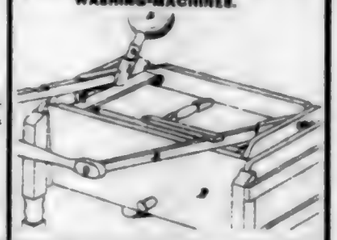
113,124. THOMAS ATWOOD WILLSON. TINTED GLASS FOR SPECTACLES.

113,125. JACOB A. WOOD. THOMAS WOOD. BEAN-HARVESTERS.

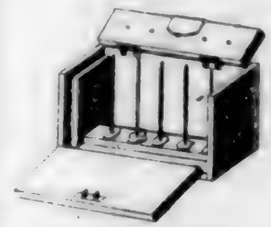
113,126. ELIAS ZIEGLER. CHARLES CABLE. GRAPPLING-HOOKS.



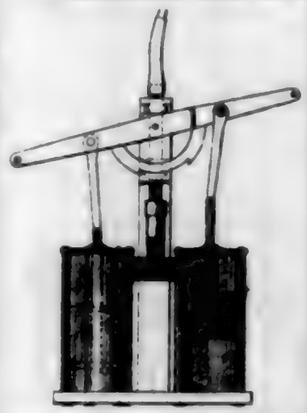
113,127. JOHN ZENGELER. COLORING AND STAINING MARBLE.



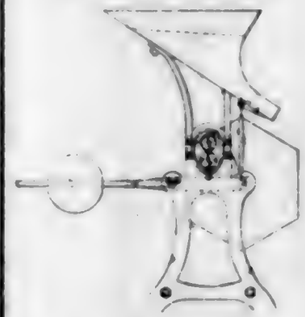
113,128. JOHN H. ANDRUS. SKIN UNDER-GARMENTS.



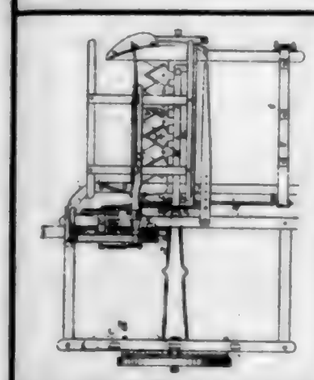
113,129. HENRY M. ANDRUS. JEHIEL M. CLEVELAND. CLOTHES-RACKS.



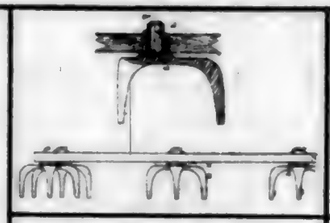
113,130. ALFRED M. BAILEY. WASHING-MACHINES.



113,131. ANDREW A. BAKER. CHECK-HOLDERS.



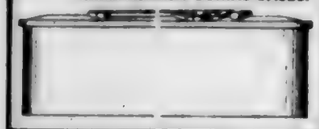
113,132. JEREMIAH BARNEY. DOUBLE-ACTING FORCE-PUMPS.



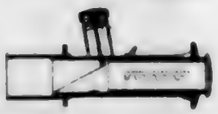
113,133. WILLIAM HY. BAXTER. GRAIN-WEIGHING REGISTERS.

113,134. J. H. BEAM. HARVESTERS.

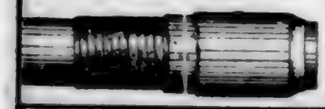
113,135. THOMAS T. BISHOP. HENRY J. MERRET. SEWING-MACHINE CASTERS.



113,136. VALENTIN BORST. HARNESS-SADDLES.

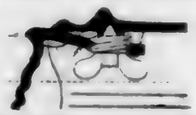


113,137. J. A. BOSTWICK. NOZZLES FOR OIL-CANS.

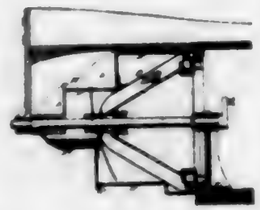


113,138. FRED. W. BROWN. COMPOSITION BURIAL-CASES.

113,139. GEORGE D. CAPEWELL. GEORGE A. CAPEWELL. JOSEPH T. CAPEWELL. SHOT-CHARGERS.

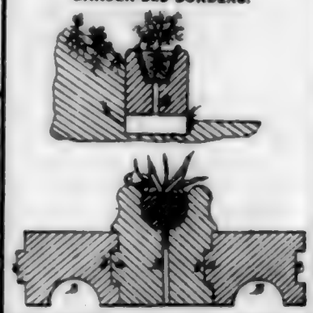


113,140. WM. A. CASWELL. TOP-ROLLS FOR SPINNING.

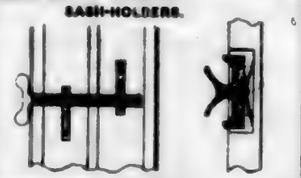


113,141. JOHN F. CHASE. ROTARY-HARROWS.

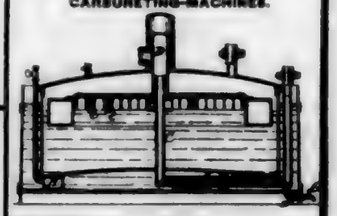
113,142. THOS. J. CLOSE. STOVE-LEGS.



113,143. GEORGE B. COCKS. MARINE PROPELLERS.



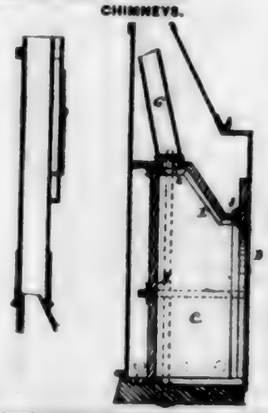
113,144. NATHAN T. COFFIN. PUMPS.



113,145. JOSEPH EDGAR DICKSON. EELYE RICHMOND. GARDEN-BED BORDERS.

113,146. JACOB J. DIEHL. SASH-HOLDERS.

113,147. A. B. DUPAS. ARTHUR BARBARIN. CARBURETING-MACHINES.



113,148. DAVID EDWARDS. CULTIVATORS.

113,149. THOS. R. EVANS. SHOES AND OVER-GAITERS.

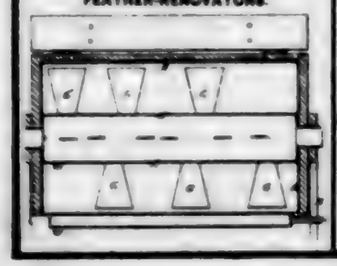
113,150. ALVAN B. EWING. CHIMNEYS.

113,151. PHILIP FAY. MEDICAL COMPOUNDS FOR CURE OF SCROFULA, LIVER COMPLAINT,

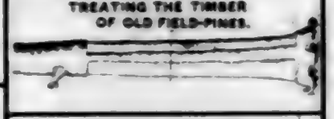
113,152. HENRY FELLOWS. SPURS.

113,153. DANIEL FISHER.
WILLIAM CUMMLG.
VALVES FOR OIL-TANKS.

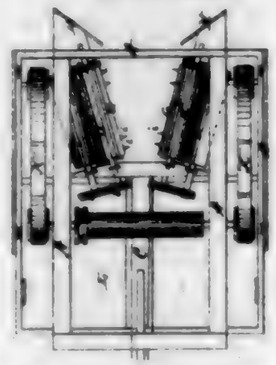
113,154. DAVID A. FOOT.
GEO. S. KNAPP.
LIGHTNING-RODS.



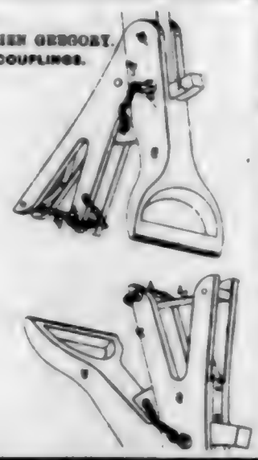
113,155. BENJAMIN P. FREEMAN.
PAT. PAYTON.
SPARK-ARRESTERS FOR LOCOMOTIVE



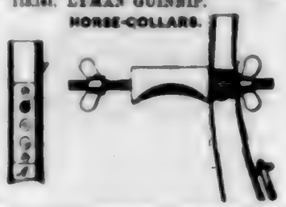
113,156. DANIEL S. FRENCH.
COFFEE-POTS.



113,157. JONATHAN GARRETT.
JONAS R. BAUCH.
FEATHER-RENOVATORS.

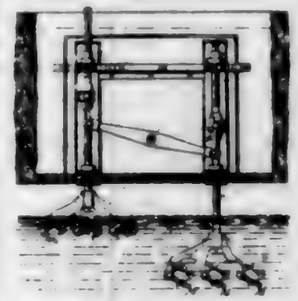


113,158. JAMES H. GATLING.
TREATING THE TIMBER OF OLD FIELD-PINES.

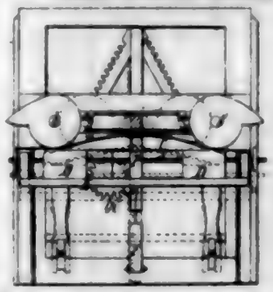


113,159. WILLIAMSON GOODWIN.
SINCLAIR D. G. BILES.
COTTON-PICKERS.

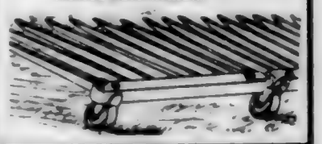
113,160.
STEPHEN GREGORY.
CAR-COUPLINGS.



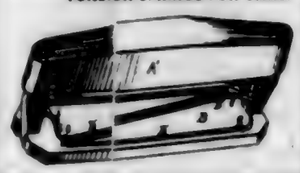
113,161. LYMAN GUINIP.
HORSE-COLLARS.



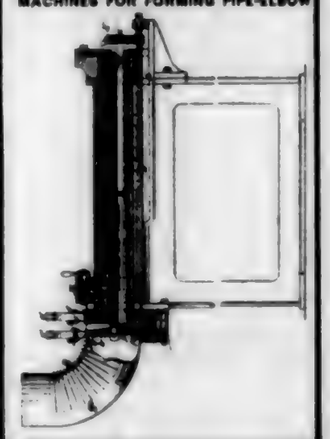
113,162. T. C. HARGRAVE
WATER-METERS.



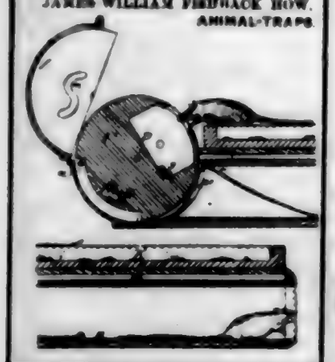
113,163. C. A. S. HARRIS.
PROPELLERS FOR VESSELS.



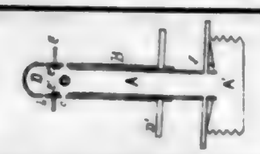
113,164. WM. HARTY. MACHINES FOR FORMING CARRIAGE-SPRINGS.



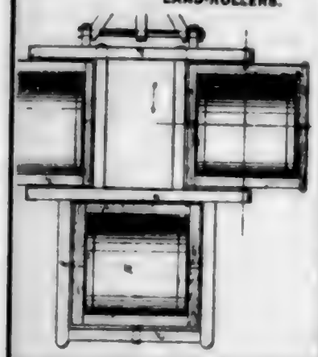
113,165. JOHN F. HENKLE.
HORSE HAY-RAKES.



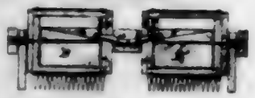
113,166. BENJAMIN HERSHEY.
TORSION-SPRINGS FOR CARS.



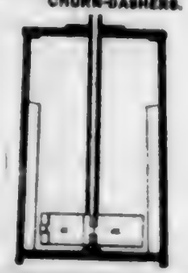
113,167. CHARLES HOELLER.
MACHINES FOR FORMING PIPE-ELBOW



113,168.
JAMES WILLIAM FIELDBACK HOW.
ANIMAL-TRAPS.

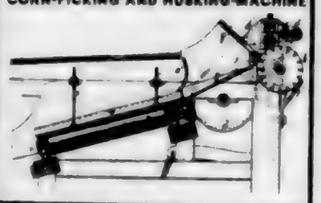


113,169. JOHN T. HUDNET.
HOLLOWAY W. MATHEWS.
LAND-ROLLERS.

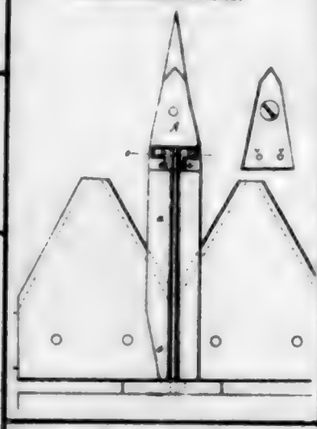


113,170. JNO. HUGHES.
COTTON-PICKERS.

113,171. WM. C. JOHNSON.
HUBS FOR WHEELS.

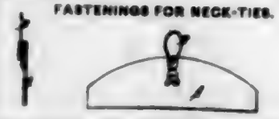


113,172. COLUMBUS JOHNSTON.
CHURN-DASHERS.

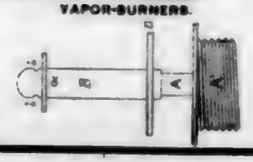


113,173. WILLIAM R. JUSTUS.
HORSESHOE-MACHINES.

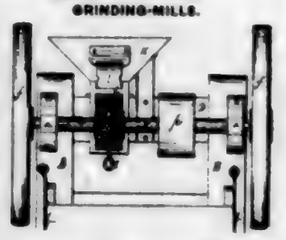
113,174. SILAS B. KENYON.
CORN-PICKING AND HUSKING-MACHINE



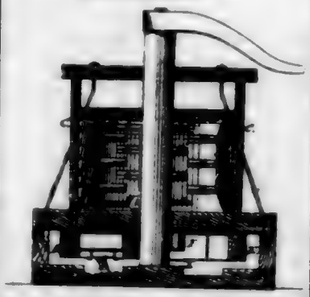
113,175. WM. G. KENYON.
HARVESTER-CUTTERS.



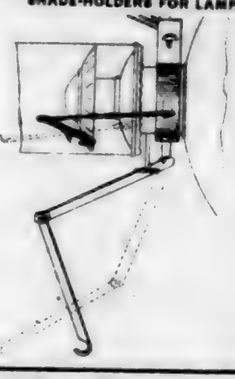
113,176. RUDOLPH C. KLEIN.
COMPOSITIONS FOR LUBRICATING JOURNALS.



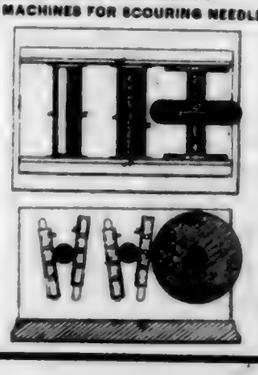
113,177. A. KOMP.
FASTENINGS FOR NECK-TIES.



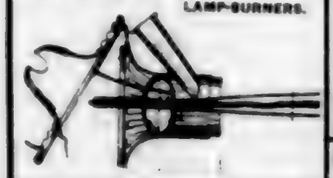
113,178. WM. H. LAWRENCE.
VAPOR-BURNERS.



113,179. EDWIN D. LITTLE.
EDGAR C. LITTLE.
GRINDING-MILLS.

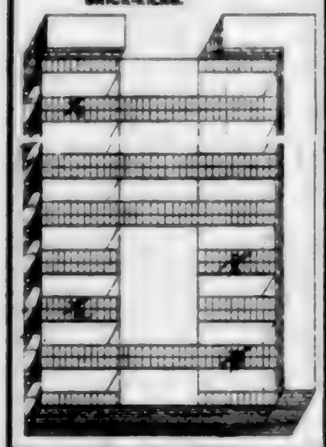


113,180. ZALMON LUDINGTON.
PEAT-MACHINES.



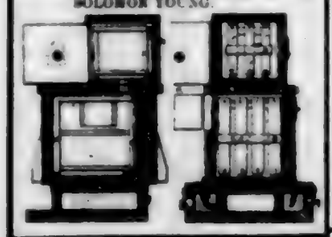
113,181. JAMES W. LYON.
SHADE-HOLDERS FOR LAMPS.

113,182. FRANCIS W. MALLETT.
MACHINES FOR SCOURING NEEDLES.

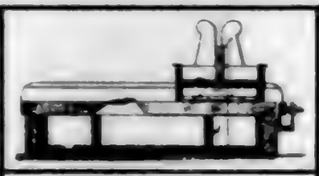


113,183. CHAS. B. MANN.
LAMP-BURNERS.

113,184. ROBERT J. MANN. SEWER.

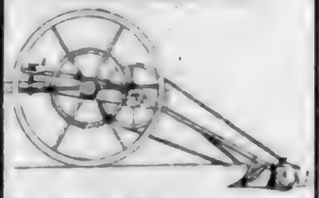


113,185. J. M. McCARTHY.
BRICK-KILNS.

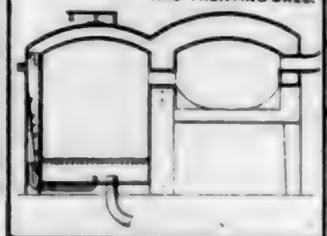


113,186. JAMES MEGRATTEN.
EARTH-CLOSETS.

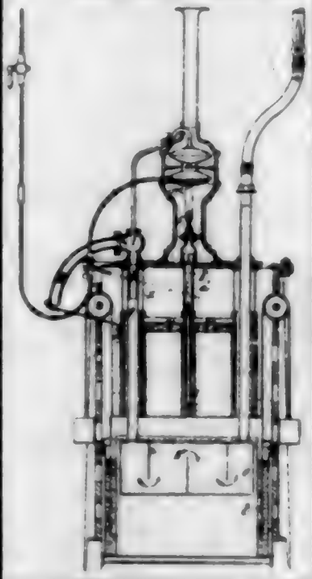
113,187. JOHN F. METHERD. BEE-HIVES.
SOLOMON YOUNG.



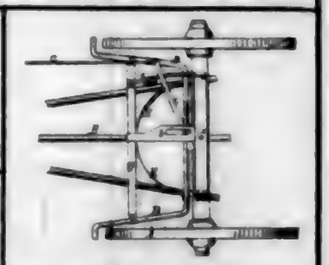
113,188. MOUSSET, FRANCISQUE.
VEGETABLE-CUTTERS.



113,189. CHAS. E. MORRILL.
JOHN E. COFFIN.
GEO. F. HALL.
MACHINES FOR STRIPING AND CUTTING LEATHER



113,190. J. B. MORRIS.
ROTARY SUBSOIL-PLOWS.



113,191. JOSEPH E. MORRIS.
FURNACES FOR PRODUCING HYDROGEN AND TREATING ORES.

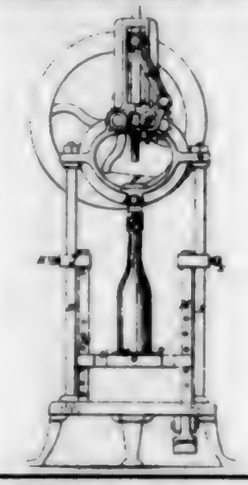
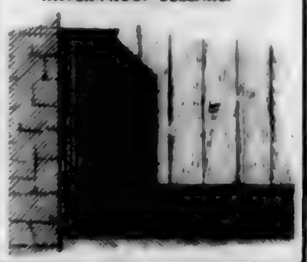
113,323 SIMON MOFFITT
AWNINGS FOR ANIMALS.



113,324. GEO. B. MOORE.
FURNACE-GRATES.

113,325 FRANKLIN H. MORRILL.
MACHINES FOR WINDING BOBBINS.

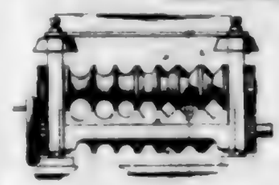


113,326 D. MUELLER.
MACHINES FOR CORKING BOTTLES.

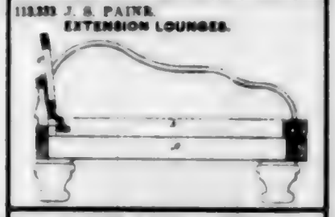
113,327. PETER H. MURRAY
MODES OF PREPARING PAPER FOR PHOTOGRAPHIC PURPOSES.

113,328. TOBIAS NEW.
WATER-PROOF CELLARS.

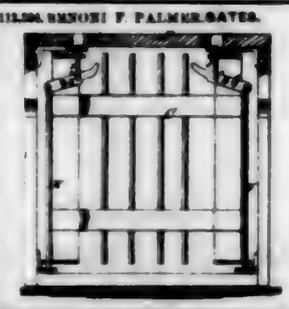
113,329. GEO. H. NICHOLS. FIRE-ESCAPES.



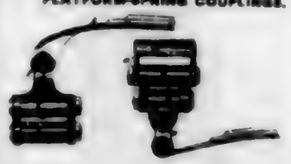
113,330. CHARLES HORACE NOYES.
COMBS.



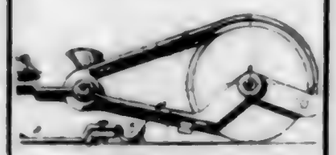
113,331. RICHARD O'NEIL.
ORNAMENTING THE SURFACE OF METALS BY ELECTRO-DEPOSITIONS FROM SOLUTIONS.



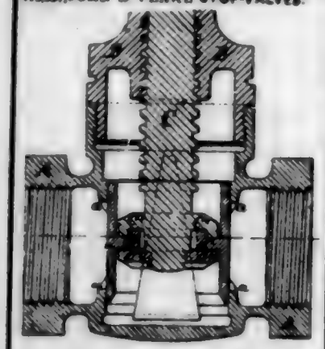
113,332 JONATHAN OSTRANDER.
MACHINES FOR ROLLING HOLLOW BARS FOR NUTS.



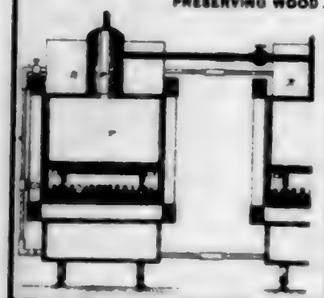
113,333 J. S. PAINE.
EXTENSION LOUNGES.



113,334. SIMEON F. PALMER-GATES.



113,335 BENJAMIN T. PARSELL
JOHN L. HEDGES.
PLATFORM-SPRING COUPLINGS.

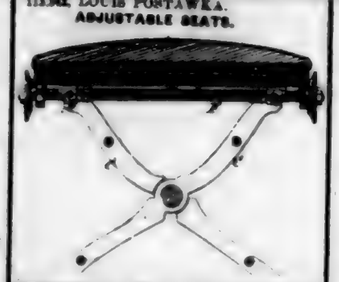


113,336. EBENEZER G. PASSMORE.
LAWN-MOWERS.

113,337. JOHN L. PEAKE STOP-VALVES.

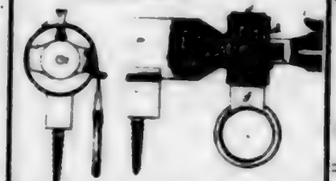
113,338 WILLIAM TILDEN PELTON
PORTABLE APPARATUS FOR PRESERVING WOOD.

113,339. E. CONSTANTIN PFAFF.
APPARATUS FOR STRIPPING THE TOP FLATS OF CARDING-MACHINES.

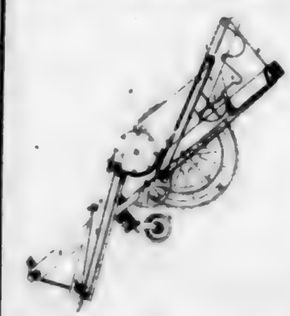


113,340. LEONCE PICOT. COMBS.

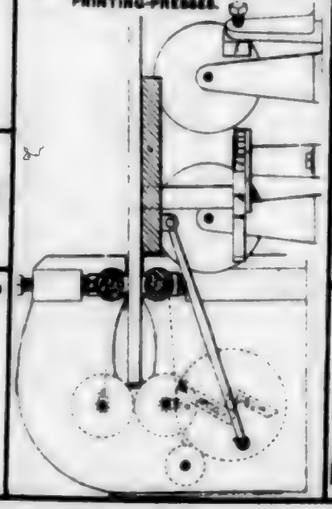
113,341. SAMUEL W. POPE. SHOVEL-PLOW



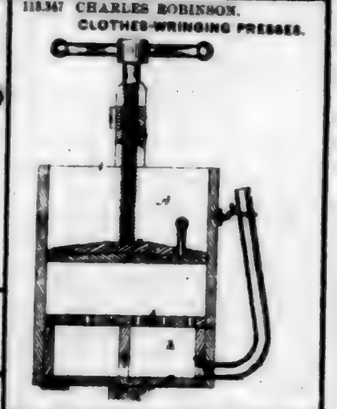
113,342. LOUIS PORTAWKA.
ADJUSTABLE SEATS.



113,343. LOUIS PRANG.
PRINTING SILKS AND OTHER TEXTILE FABRICS.

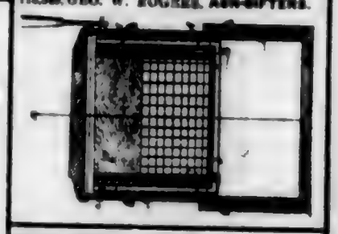


113,344. W. H. RAND.
DRILL-STOCKS.

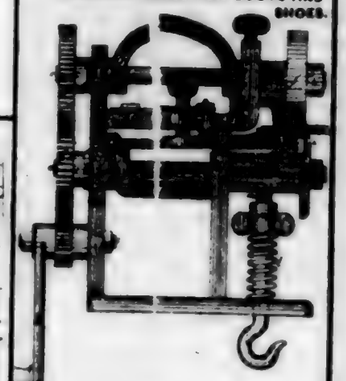


113,345 GEORGE RIEKE.
FIELD THRASHING-MACHINES.

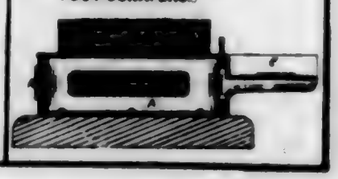
113,346 JUDAH TOURO ROBERTSON.
PRINTING-PRESSES.



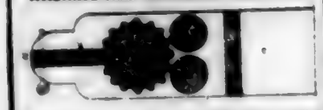
113,347 CHARLES ROBINSON.
CLOTHES-WRINGING PRESSES.



113,348 A. M. RODGERS.
RAILROAD-CAR HEATERS.



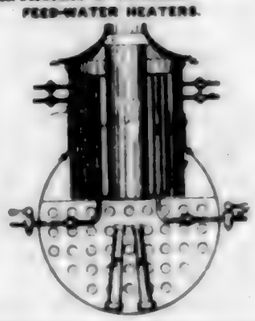
113,349. GEO. W. ROGERS. ASH-SIFTERS.



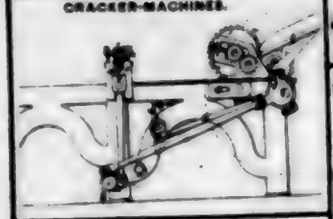
113,350. JOHN G. ROSS.
MACHINES FOR CHANNELING AND BEVELING SOLES FOR BOOTS AND SHOES.

113,351. AUGUST SAHLSTROM.
FOOT-SCRAPERS.

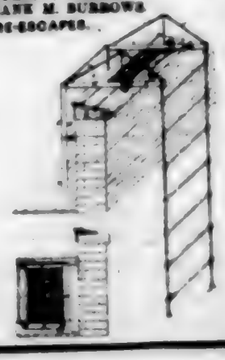
113,352 JACOB S. SANDT.
WASHING AND WRINGING-MACHINES.



113,353 WILLIAM S. SHACKLETON
COAL-DELIVERING SACKS.



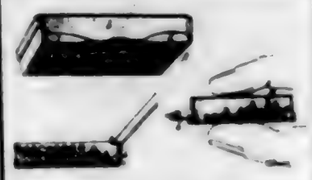
113,354 W. W. SIMONS.
HOLDBACKS FOR VEHICLES.



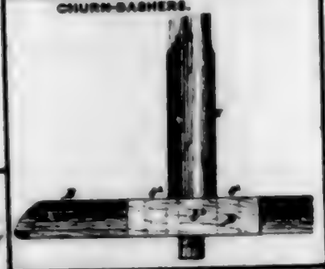
113,355 THOMAS D. SIMPSON.
FEED-WATER HEATERS.

113,356 GEO. B. SKILLMAN.
CRACKER-MACHINES.

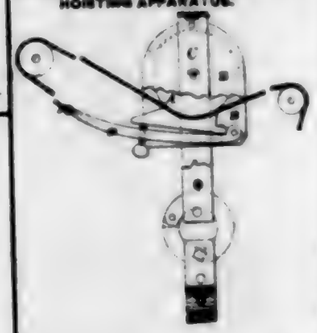
113,357 GEORGE C. SMITH.
FRANK M. BURROWS.
FIRE-ESCAPES.



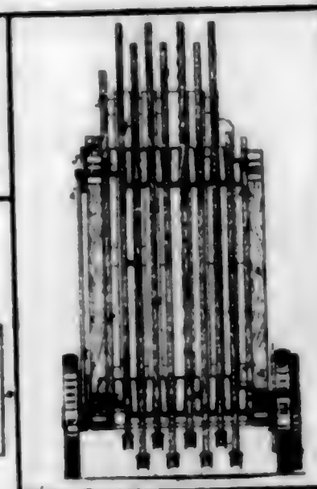
113,358 G. STACKPOLE. WHISK BROOMS.



113,359 HUGH M. STEPHENSON.
JOHN B. TYER.
MAIL-BAG FASTENERS.



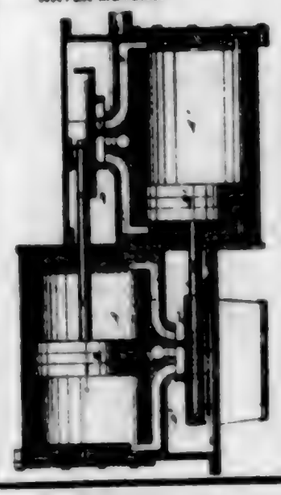
113,360 WILLIAM STINE. MATCH-SAFES.



113,361 STEPHEN STOUT.
CHURN-DASHERS.

113,362 LEVERETT W. STUART.
HOISTING APPARATUS.

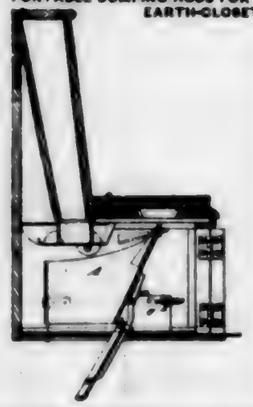
113,363 LUMAN D. TAYLOR.
HAY-LOADERS.



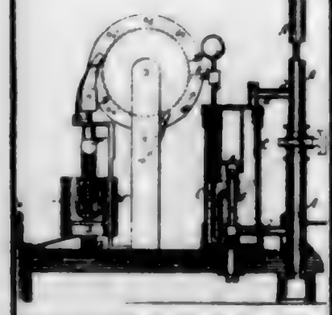
113,364 NATHAN THOMPSON.
WINDOW-SHADE FIXTURES.

113,365 OSBORN W. THOMSON.
COATING LAMPS.

113,366 ISAAC P. TICE.
WATER-METERS.



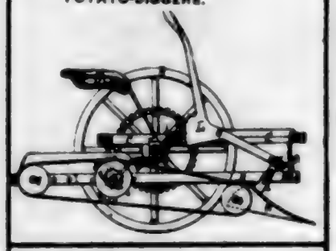
113,367 THOMAS H. TRANTHAM.
COTTON-SCRAPERS.



113,368 S. THURCOTT. RUBBER PAINT.

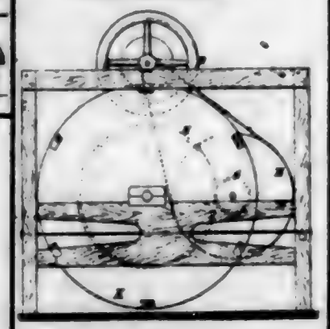
113,369 K. W. C. VANDERVEER.
PORTABLE BUMPING-HODS FOR EARTH-CLOSETS.

113,370 JOHN VANSANT.
ELECTRIC GAS-LIGHTING AND EXTINGUISHING APPARATUS.

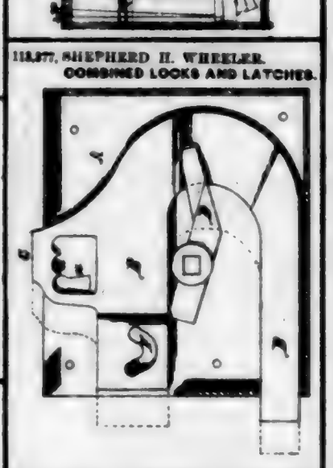


113,371 CORNELIUS B. VERONEE.
ANIMAL-TRAPS.

113,372 JOHN VAN VLECK.
BED-LOUNGES.

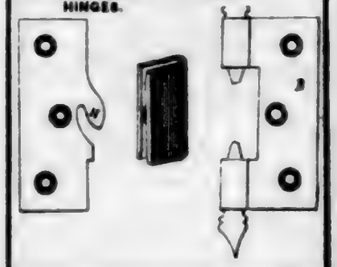


113,373 JOHN A. WADHAMS.
POTATO-DIGGERS.

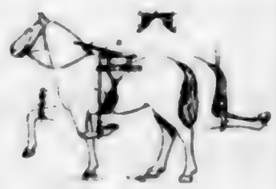


113,374 JOHN B. WALSH.
COFFER-DAMS.

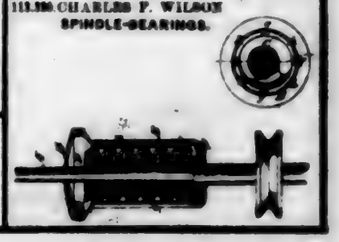
113,375 WILLIAM W. WATERBURY.
JOHN M. WATERBURY.
SAWING-MACHINES.



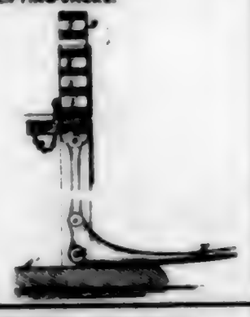
113,376 DR. ADAM WESTON.
VOTE-RECORDING MACHINES.



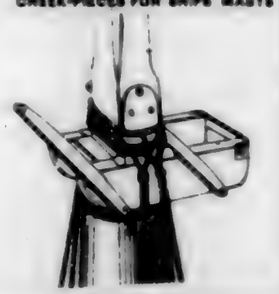
113,377 SHEPHERD H. WHEELER.
COMBINED LOCKS AND LATCHES.



113,378 SHEPHERD H. WHEELER.
HINGES.



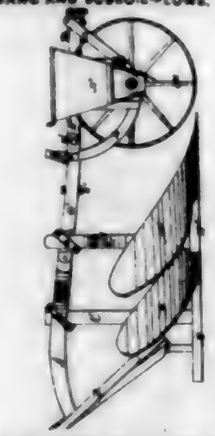
113,379 THOMAS C. WILLIAMS.
FOOT-LIFTERS FOR BLACKSMITHS.



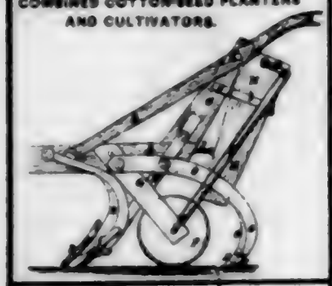
113,380 CHARLES P. WILSON.
SPINDLE-BEARINGS.

113,392. HIRAM J. WILSON.
LIFTING-JACKS.

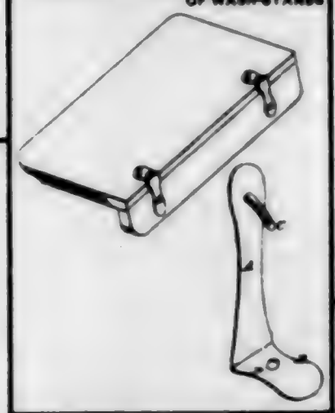
113,393. JOSEPH BAYMORE.
CHEEK-PIECES FOR SHIPS' MASTS



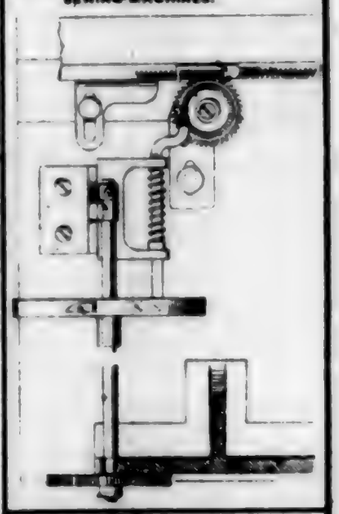
113,394. JAMES HENRY LAURENCE WILSON.
GRIB ATTACHMENTS FOR BEDSTEADS.



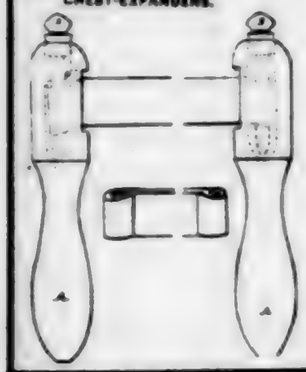
113,395. SYLVESTER W. BEACH.
ADJUSTABLE CARRIAGE-SEATS.



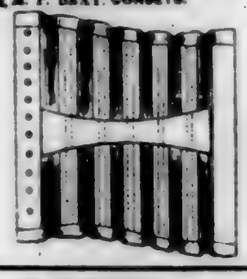
113,396. JOEL L. BOND
SAND AND SUBSOIL-PLOWS.



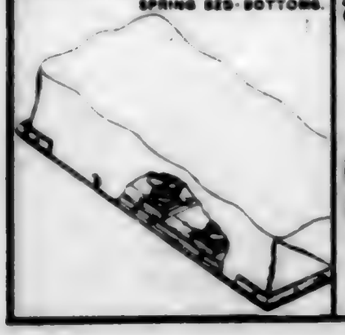
113,397. JAMES A. WRIGHT.
COMBINED COTTON-SEED PLANTERS AND CULTIVATORS.



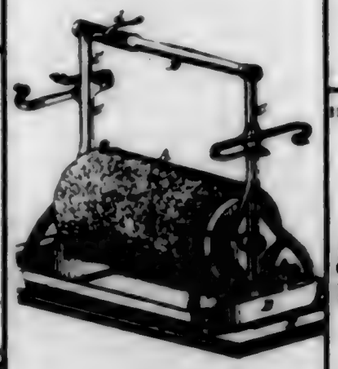
113,398. WILLIAM J. BENDER.
ATTACHING MARBLE TOPS AND BACKS OF WASH-STANDS



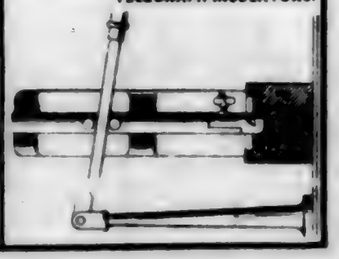
113,399. T. W. BRACHER.
SEWING-MACHINES.



113,400. SAMUEL M. BARNETT
CHEST-EXPANDERS.



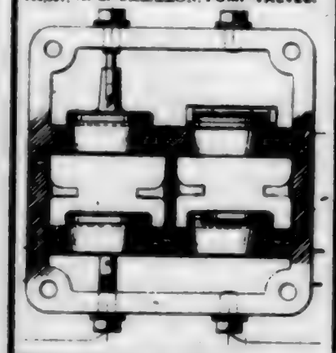
113,401. M. P. BRAY. CORSETS.



113,402. LYMAN M. BATES
SPRING BED-BOTTOMS.

113,403. NORBORNE BERKELEY.
DOOR-MATS.

113,404. WM. BROOKFIELD.
MODES OF MAKING TELEGRAPH-INSULATORS.

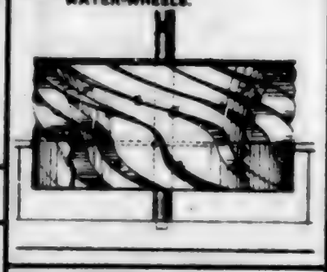


113,394. MORGAN W. BROWN.
PACKAGES FOR HYDROCARBONS AND OTHER LIQUIDS.

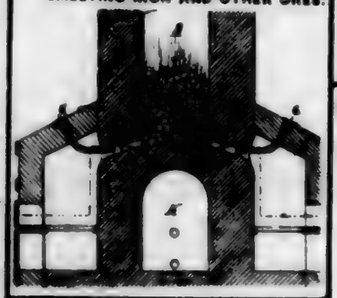
113,395. MORGAN W. BROWN.
PACKAGES FOR OYSTERS, CLAMS, &c.

113,396. MORGAN W. BROWN.
COVERINGS FOR SAUSAGES AND OTHER MEATS.

113,397. A. S. CAMERON. PUMP-VALVES.

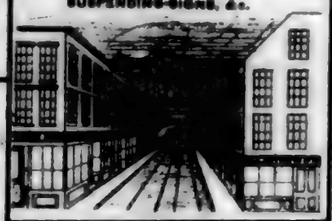


113,398. J. FRANK CHANDLER
TOWEL-BRACKETS AND SPONGE-HOLDERS.

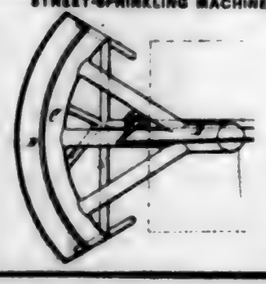


113,399. D. M. COOK.
ELECTRIC BATTERIES FOR TELEGRAPHING AND OTHER PURPOSES.

113,400. GARDNER COX.
WATER-WHEELS.



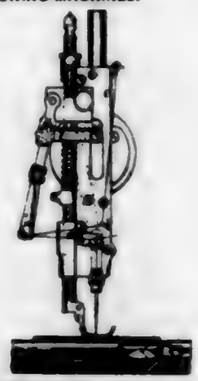
113,401. RICHARD D. COX.
WILLIAM F. COX.
SMELTING IRON AND OTHER ORES.



113,402. BENJAMIN F. CRANDALL, Jr.
CHILDREN'S CARRIAGES OR PERAMBULATORS.

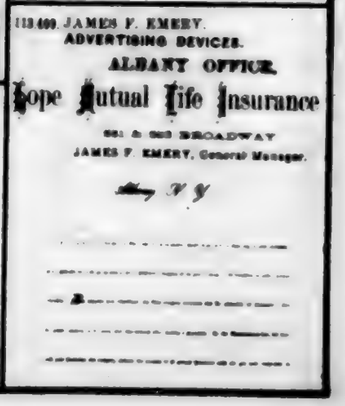
113,403. JOHN H. CRANE.
CHAS. W. CRANE.
SUSPENDING SIGNS, &c.

113,404. SAML. E. CURSONS.
STREET-SPRINKLING MACHINES.

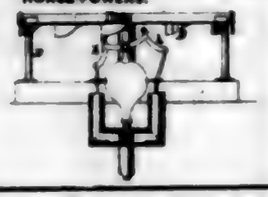


113,405. COLLINS W. DEANE.
SEDIMENT-COLLECTORS FOR STEAM-BOILERS.

113,406. MYRON H. DENSMORE.
TRACE-BUCKLES.

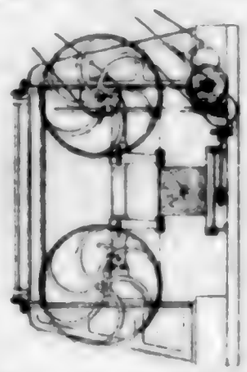


113,407. A. S. DINSMORE.
SEWING-MACHINES.

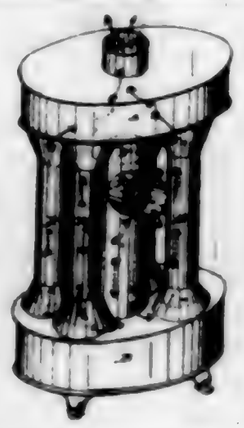


113,408. WILLIAM C. DODGE.
BREECH-LOADING FIRE-ARMS.

113,409. JAMES F. EMERY.
ADVERTISING DEVICES.

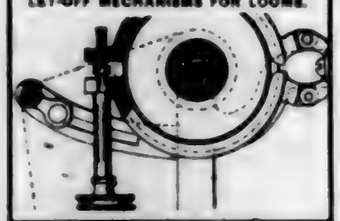


113,410. THOMAS ADDIS EMMET EVANS.
HORSE-POWERS.



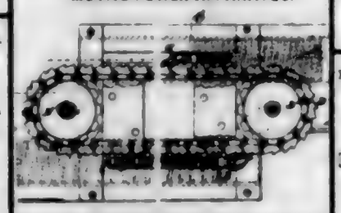
113,411. BENJAMIN FERRIS.
EARTH-CLOSETS.

113,412. GEORGE FINNEGAN. SAW-MILLS.



113,413. CHAS. FISHER. STOVE-DRUMS.

113,414. CHARLES FLESCH.
TUMBLERS FOR PERMUTATION-LOCKS.

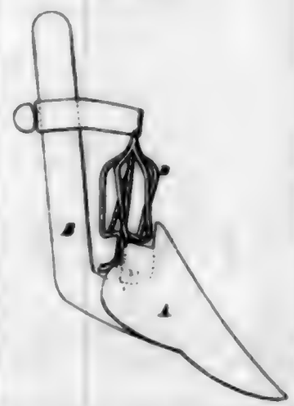


113,415. W. T. FLINN.
LET-OFF MECHANISMS FOR LOOMS.

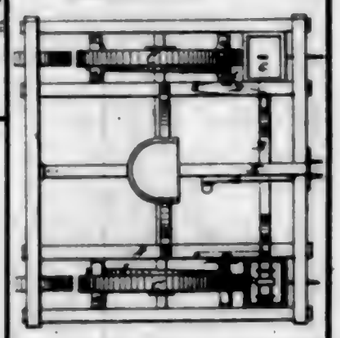
113,416. DAVID FORBES.
ASTLEY PASTON PRICE.
TREATMENT OF SEWAGE AND THE MANUFACTURE OF FERTILIZERS.

113,417. JOHN T. GILBERT.
MOTIVE-POWER APPARATUS.

113,418. THOS. S. GILBERT.
SKELETON CORSETS.

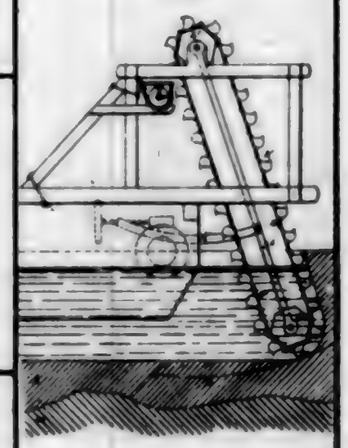


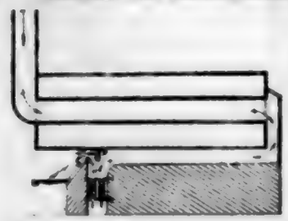
113,419. THOS. S. GILBERT.
CORSETS.



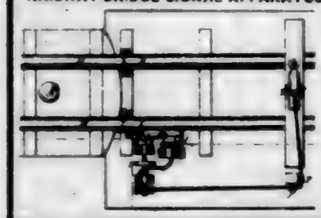
113,420. CHAS. GOODYEAR, Jr.
JOSE DA SILVA.
BOOT AND SHOE-SOLES.

113,421. C. M. GORDON.
PLOW-COLTERS.





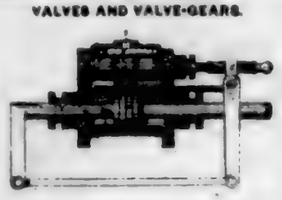
113,422. LEWIS GRAHAM.
CORN-PLANTERS.



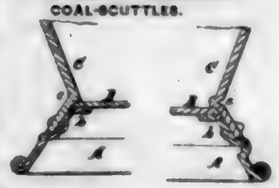
113,423. ROBERT ARTHUR GRIFFIN.
MANUFACTURE OF PEAT-FUEL.

113,424. JOHN C. GRIPP.
FURNACES FOR STEAM-BOILERS.

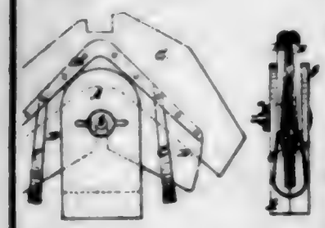
113,425. THOMAS S. HALL.
RAILWAY-BRIDGE SIGNAL APPARATUS



113,426. HENRY HAPPEL.
COMPOSITIONS FOR COATING PHOTOGRAPH-PICTURES.

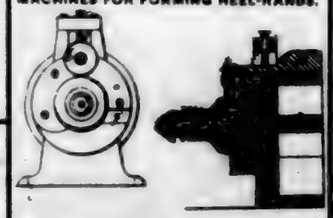


113,427. THOMAS C. HARGRAVE.
ROLLED METALLIC STRIPS FOR WASHERS.



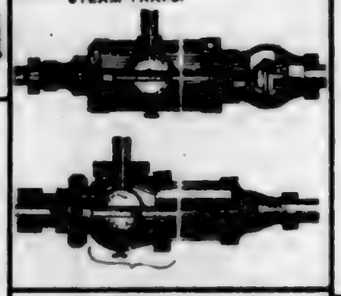
113,428. WILLIAM E. HATCHER.
VALVES AND VALVE-GEARS.

113,429. GEORGE H. HAZELTON.
DWIGHT W. HAZELTON.
COAL-SCUTTLES.

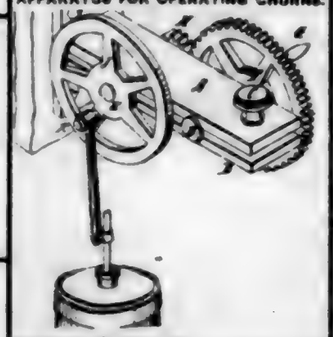


113,430. HENRY HENLEY.
BOOT-CRIMPERS.

113,431. ALFRED C. HOBBS.
BULLET-PATCHES.



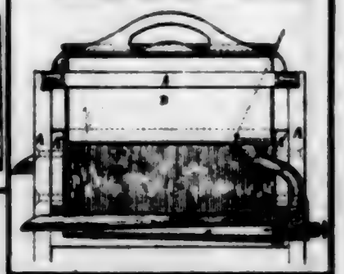
113,432. SUMNER HOLMES.
JOE F. SARGENT
MACHINES FOR FORMING HEEL-RANDS.



113,433. EDMUND S. HOWLAND.
GRINDING-PLATES.

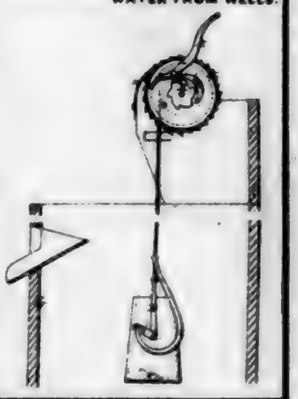
113,434. JOHN JOS. JORDAN.
STEAM-TRAPS.

113,435. P. L. JORDAN.
APPARATUS FOR OPERATING CHURNS.

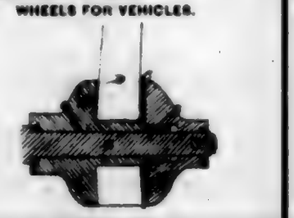


113,436. JOHN LANE, Jr.
PLOWS.

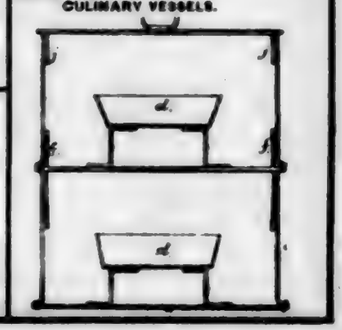
113,437. E. C. LITTLE.
D. H. NATION.
COOKING-STOVES.



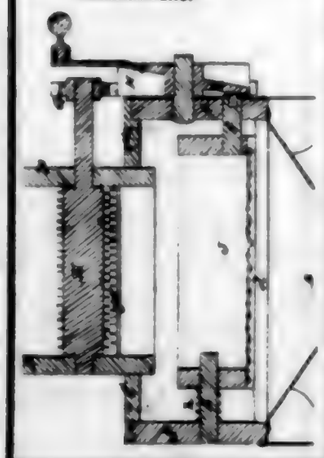
113,438. JOHN R. McKAY.
APPARATUS FOR COOLING MILK.



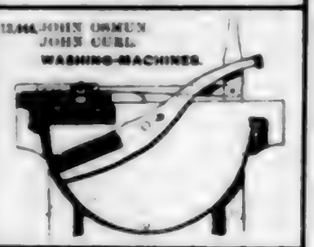
113,439. EDGAR C. MERRILL.
MANUFACTURE OF EMERY-WHEELS AND ARTIFICIAL STONE.



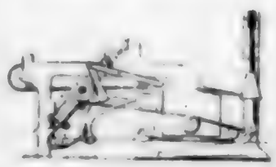
113,440. MERRICK A. MIHILLS.
APPARATUS FOR DRAWING WATER FROM WELLS.



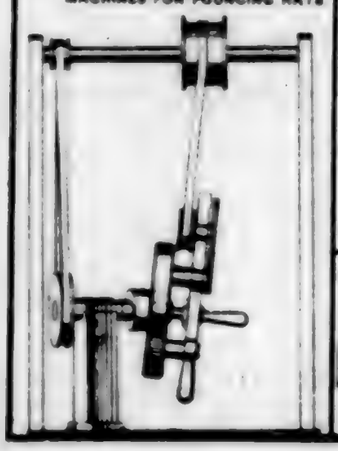
113,441. JAMES R. MILLS.
WHEELS FOR VEHICLES.



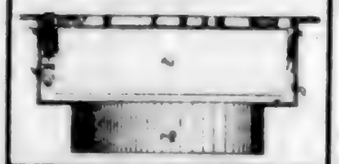
113,442. WM. H. MURCH.
CULINARY VESSELS.



113,443 OLIVER D. MYERS.
FLOUR-SIFTERS.



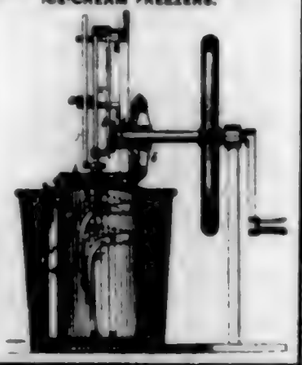
113,444 JOHN OMMUN
JOHN CURL.
WASHING-MACHINES.



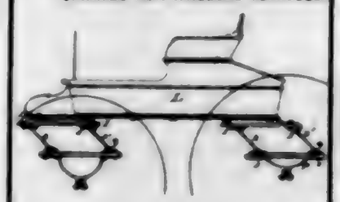
113,445 CHARLES BRAHAM PARKINSON
AARON METCALF
JOHN METCALF
WILLIAM HESKETH DEALD
SELF-ACTING MULES FOR SPINNING

113,446 A. PELISSE.
GEORGE W. STOUTE.
MACHINES FOR POUNCING HATS

113,447. HUGH M. PHINNEY.
HOT-AIR REGISTERS.

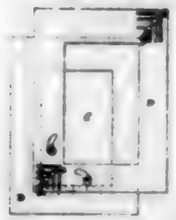


113,448. MARY FLORENCE POTTS
SAD-IRONS.



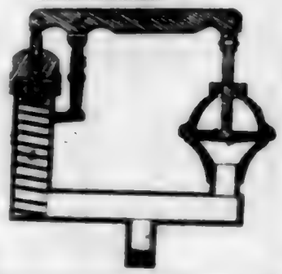
113,449. JOHN P RADLEY.
POTATO-DIGGERS.

113,450 JOHN FRANKLIN ROTH.
ICE-CREAM FREEZERS.

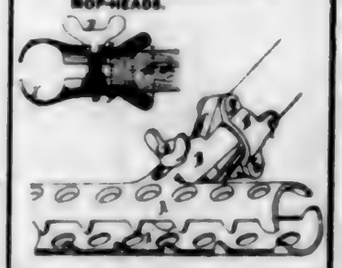


113,451. CYRUS W. SALADEE.
SPRINGS FOR WHEELED VEHICLES.

113,452 DANIEL SAYLOR.
LAURITZ ANDERSON
TABLE-LEAF SUPPORTS.

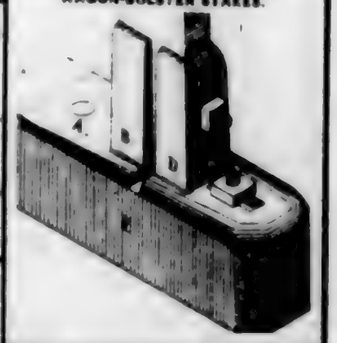


113,453 ADOLPH J. SCHAFHIRT.
APPARATUS FOR SPREADING MEDICAL PLASTERS



113,454 AUGUSTUS T. SCHMIDT.
TREATING PAPER AND VEGETABLE FIBROUS SUBSTANCES

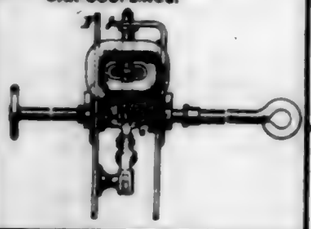
113,455. MATTHEW SCRANNAGE.
EDWARD SCRANNAGE, Jr.
SAFETY-VALVES.



113,456. ANTHONY SEABOLD.
CORN-SALVES.

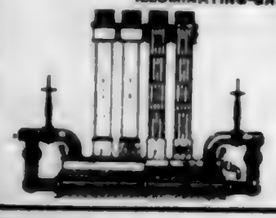
113,457. SAMUEL SELDEN.
MATTHEW GRISWOLD, Jr.
MOP-HEADS.

113,458 LEWIS W. SHAFFER.
WAGON-BOLSTER STAKES.

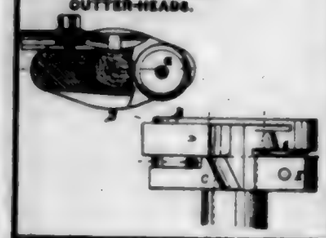


113,459 WM. T SHERMAN
COMPOUNDS FOR CURE OF FOOT-ROT IN SHEEP.

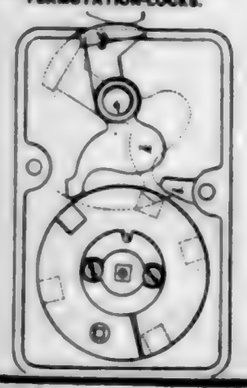
113,460. HORATIO N. SHULTZ.
FIRE-ALARMS.



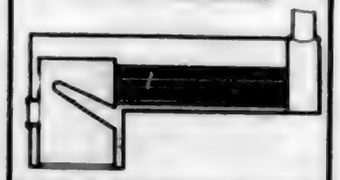
113,461, ISAAC A. SINGER.
BIRD-CAGE MATS.



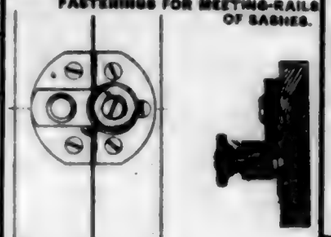
113,462. GEO. C. SPANGLER.
CAR-COUPLINGS.



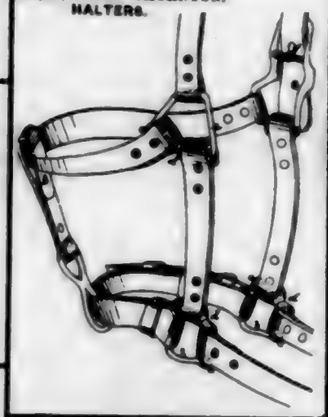
113,463. WM. H. St. JOHN.
S. O. ROCKWELL.
FRICTION-CONDENSERS FOR ILLUMINATING-GAS.



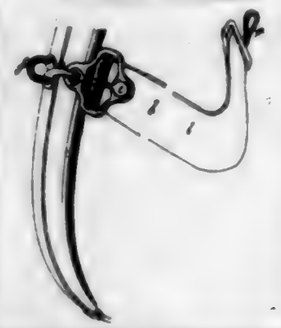
113,464. ALONZO L. SWEET.
CUTTER-HEADS.



113,465. WILLIAM TERWILLIGER.
PERMUTATION-LOCKS.

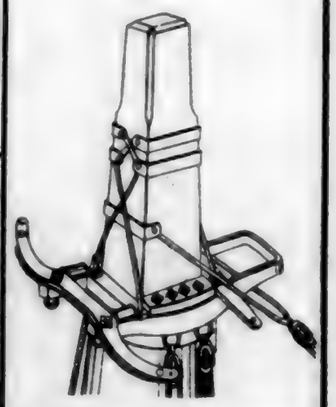


113,466. CHARLES A. THOMPSON.
TUBULAR STEAM-BOILERS.

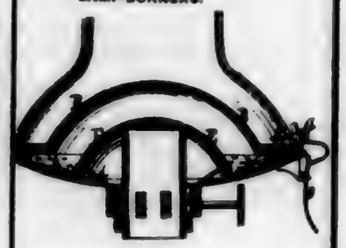


113,467. NATHAN THOMPSON
FASTENINGS FOR MEETING-RAILS OF SASHES.

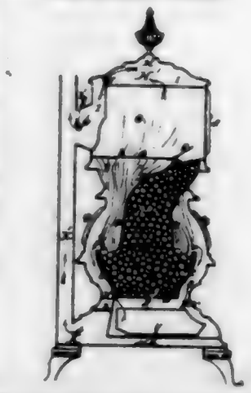
113,468. JAMES THORNTON.
HALTERS.



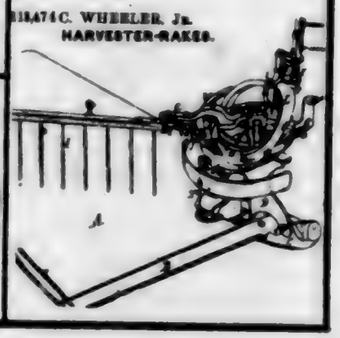
113,469. JAMES THORNTON.
EMMIT G. LATTA.
ATTACHMENTS TO HAMES.



113,470. FRANK TIPPING.
CHARLES GERNER.
BREECH-LOADING FIRE-ARMS.



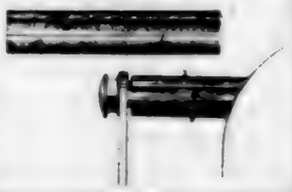
113,471. HENRY TOWNSEND.
SHIPS' TRESTLE-TREES.



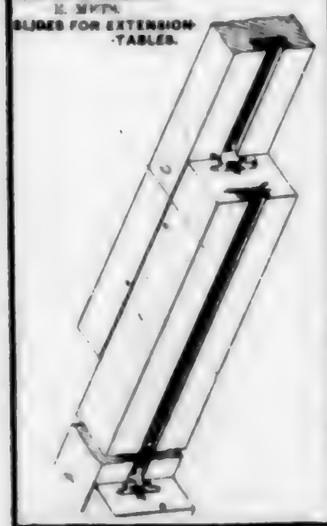
113,472. JOSEPH TRENT.
LAMP-BURNERS.

113,473. JASPER VAN WORMER.
BASE-BURNING STOVES.

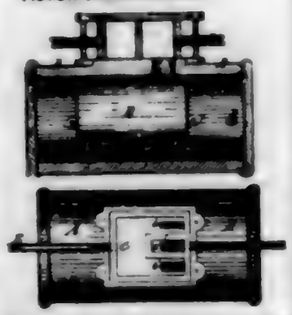
113,474 C. WHEELER, Jr.
HARVESTER-RAKES.



113,476. C. WHEELER, Jr. HARVESTERS.
CALVIN YOUNG



113,479. DOUGLAS JOSEPH WILLIAMS.
MOVABLE PARTITIONS.



113,477. JOHN J. WILSON.
BLOCKS FOR TOP-PROP JOINTS FOR CARRIAGES.

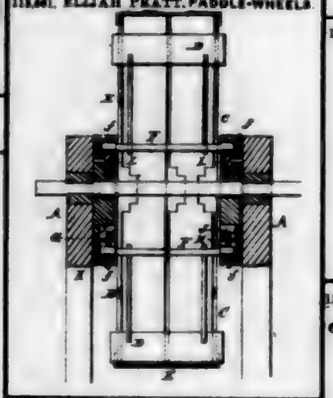
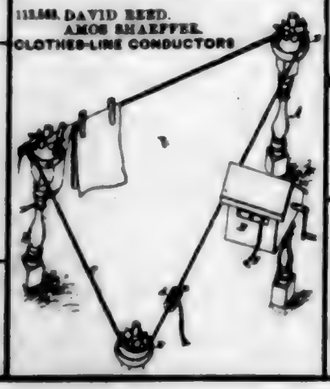
PEN-HOLDERS.

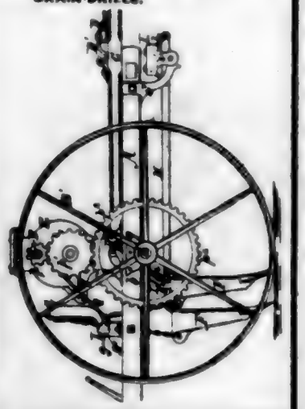


113,559. GEORGE C. PERKINS.
FRAMES FOR WIRE-MATTRESSES.

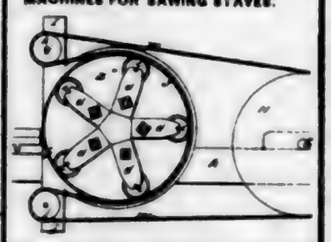
113,560. DAVID POMEROY.
DOVETAILING-MACHINES.



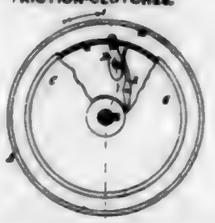
113,561. ELIJAH PRATT. PADDLE-WHEELS.



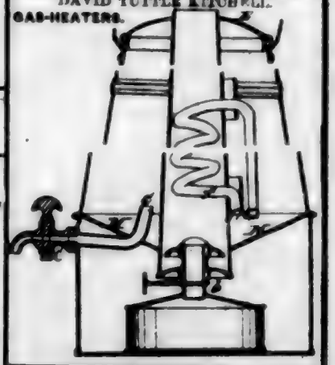
113,562. WILLIAM J. RAND, Jr.
ARTICLES FOR FOOD FROM ALGÆ OR SEA-MOSSES.



113,563. DAVID REED.
AMOS SHAEFFER.
CLOTHES-LINE CONDUCTORS.



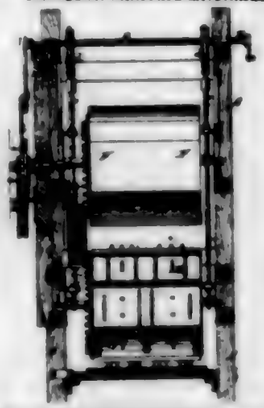
113,566. DANIEL RENTCHLER.
GRAIN-DRILLS.



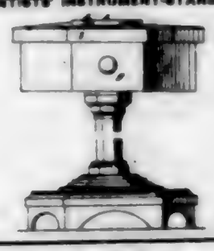
113,565. ASSARIA REWRICK.
MACHINES FOR SAWING STAVES.

113,564. GEORGE S. REYNOLDS.
FRICTION-CLUTCHES.

113,567. ORLANDO McKNIGHT REYNOLDS.
DAVID TUTTLE KITCHELL.
GAS-HEATERS.



113,568. JOSEPH H. RIGGS.
WHIFFLETREES.

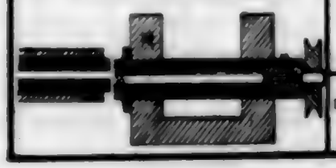


113,569. JOSEPH A. ROBBINS.
MEDICAL COMPOUNDS.

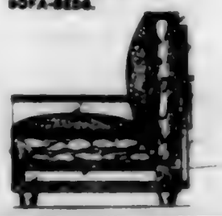
113,570. CHARLES BOMMEL.
OIL-CLOTH PRINTING-MACHINES.

113,571. JOHN J. ROSS, D. D. S.
DENTISTS' INSTRUMENT-STANDS.

113,572. BENJAMIN RYDER, Jr.
FISH-NET SUPPORTERS.



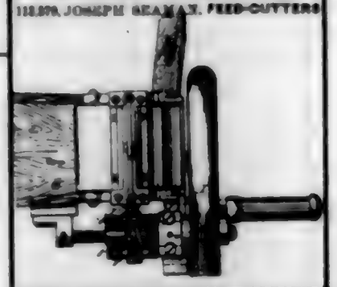
113,573. CYRUS W. SALADEE.
SPRINGS FOR VEHICLES.



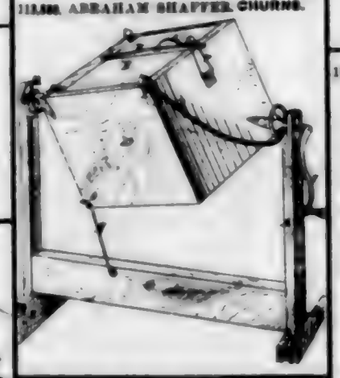
113,574. CYRUS W. SALADEE.
SPRINGS FOR VEHICLES.

113,575. JACOB H. SAWYER.
RING-SPINNING MACHINES.

113,576. CHARLES C. SCHMITT.
SOFA-BEDS.

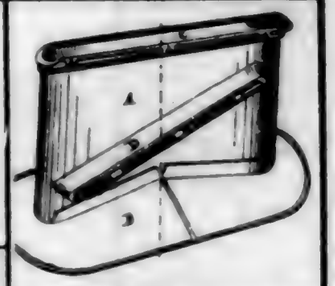


113,577. G. A. SCHULTZ. BUTTONS.



113,578. THEODORE SCHWARTZ.
KINDLING MATERIALS.

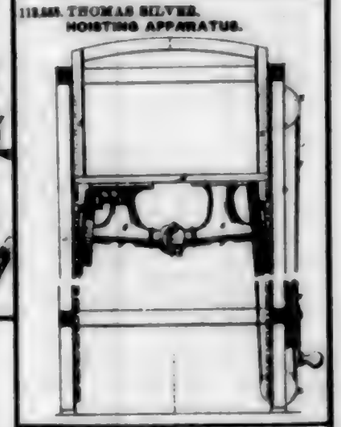
113,579. JOSEPH SEAMAN. FEED-CUTTERS.



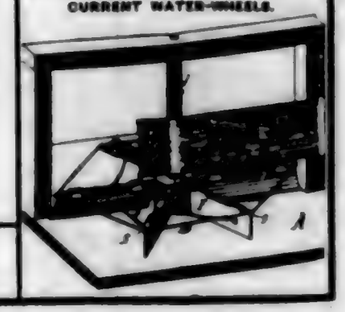
113,580. ABRAHAM SHAFFER. CHURNS.

113,581. DAVID SHANKLAND, EMERSON B. HOPKINSON.
FLY-BRUSHES.

113,582. JOHN H. SIEDCKE.
WASH-BOILERS.

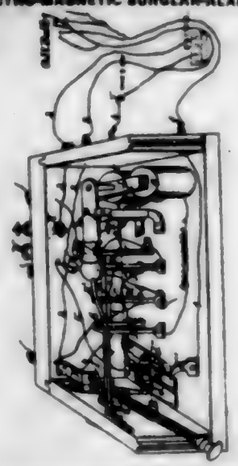


113,583. ALEXANDER H. SIEGFRIED.
REFINING IRON AND STEEL.

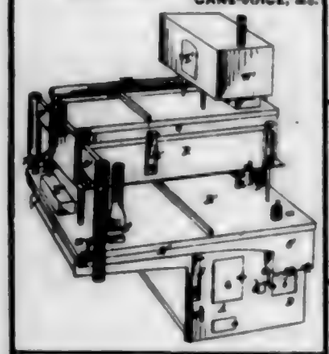


113,584. C. WILLIAM SIEMENS.
PROCESSES AND APPARATUS FOR THE PRODUCTION OF CAST-STEEL FROM ORES.

113,585. THOMAS SILVER.
HOISTING APPARATUS.



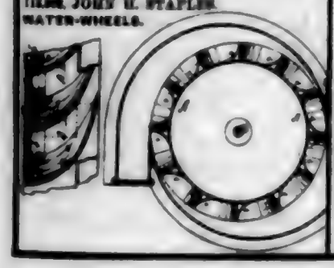
113,586. HERMAN D. SINCLAIR.
CURRENT WATER-WHEELS.



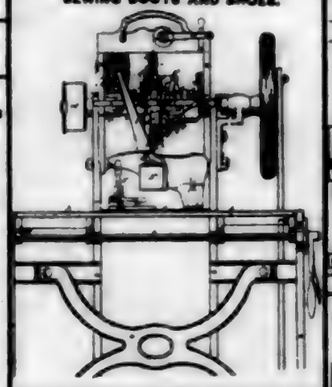
113,587. FRED. J. SLADE.
MANUFACTURE OF STEEL.

113,588. JACOB H. SMYSER.
ROOFING-COMPOSITIONS.

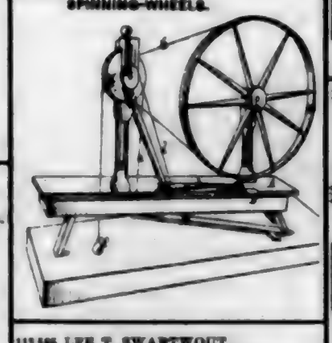
113,589. JAMES P. SNYDER.
ELECTRO-MAGNETIC BURGLAR-ALARMS.



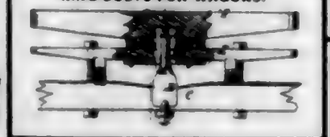
113,590. BREWSTER SPERRY.
APPARATUS FOR EVAPORATING CANE-JUICE, &c.



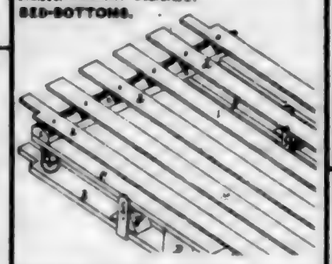
113,591. D. R. SPOONER.
LIQUID AND GAS-METERS.



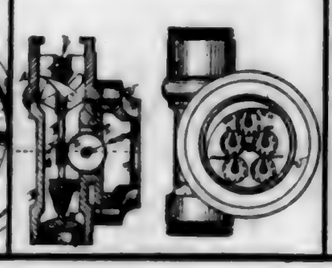
113,592. JOHN H. STAPLES.
WATER-WHEELS.



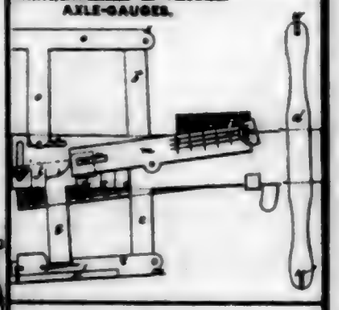
113,593. MICHAEL J. STEIN.
SEWING BOOTS AND SHOES.



113,594. JOSEPH STRAIN.
SPINNING-WHEELS.

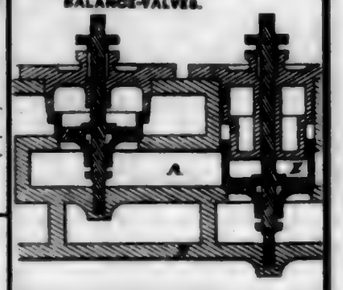


113,595. LEE T. SWARTWOUT.
KING-BOLTS FOR WAGONS.

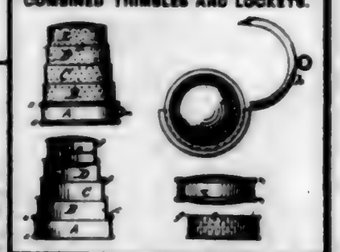


113,596. JOSEPH TINNEY.
BED-BOTTOMS.

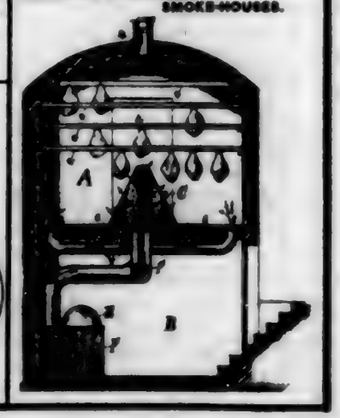
113,597. WILLIAM VAN ANDEN.
WATER-METERS.



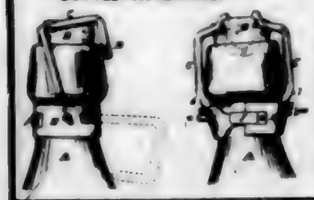
113,598. RICHARD K. VESTAL.
AXLE-GAUGES.



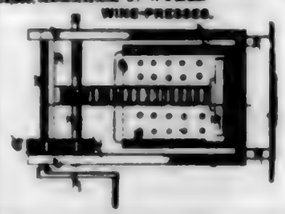
113,599. ERNEST VON JEINSEN, JAMES M. McDONALD.
OIL-RESERVOIRS FOR AXLE-BOXES.



113,600. ALEXANDER WANIOH.
BALANCE-VALVES.



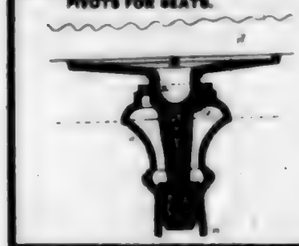
113,601. WILLIAM A. WANSLEBEN.
COMBINED THIMBLES AND LOCKETS.



113,602. ADA WATERMAN.
SMOKE-HOUSES.

113,603. EPHRAIM D. WEATHERBEE.
BOTTLE-FASTENINGS.

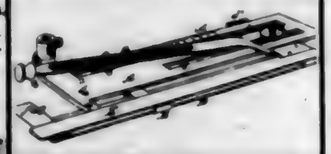
113,604. ABRAHAM P. WYKER.
WIRE-PRESSES.



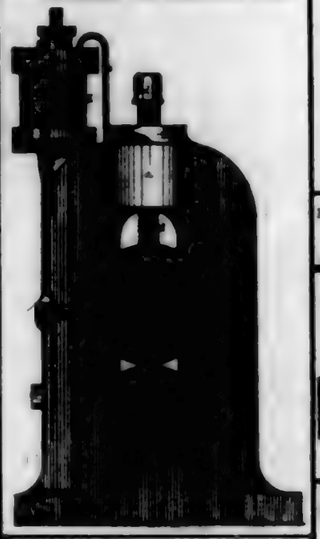
113,605. JAY J. WIGGIN.
MACHINES FOR THE MANUFACTURE OF COMPOSITION-ROOFING.

113,606. GEORGE B. WILLMOT.
FENDERS OR CUSHIONS FOR FURNITURE.

113,607. JOHN J. WILSON.
PIVOTS FOR SEATS.

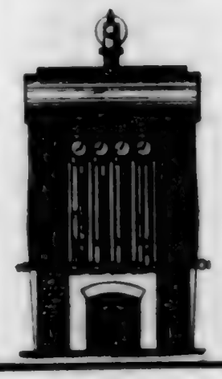


113,608. JOHN J. WILSON.
BRACKET SEATS.



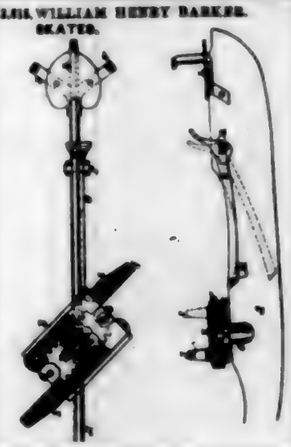
113,609. JOHN T. WILSON.
BUFFER-HEADS AND DRAW-BARS FOR RAILWAY-CARS.

113,610. ENOCH S. TENTERS.
ATTACHMENTS FOR SEWING-MACHINES.



113,611. CHRISTOPHER SUG.
MACHINES FOR SCRAPING IRON.

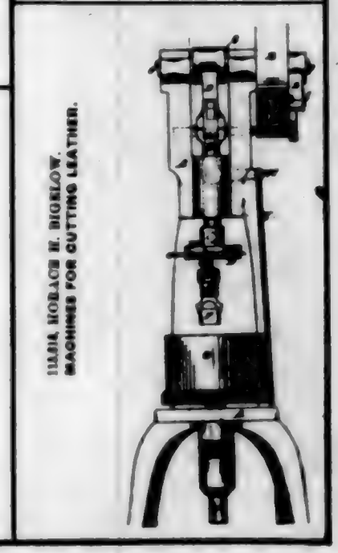
113,612. ISAAC ADAMS, JR.
ELECTROPLATING WITH NICKEL.



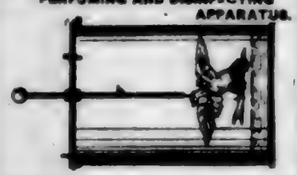
113,613. JOHN F. ALLEN.
STEAM-GENERATORS.

113,614. WM. AUSTIN.
WM. ORDYKE.
PIPE-ELBOWS.

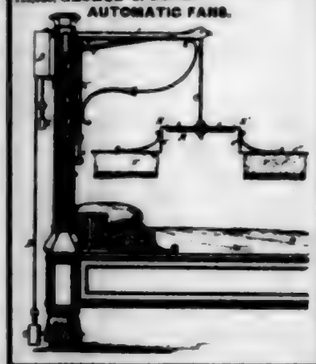
113,615. WILLIAM HENRY BARKER.
SKATES.



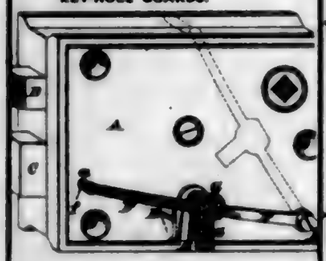
113,616. ALBERT G. BARRETT.
BALANCED SLIDE-VALVES.



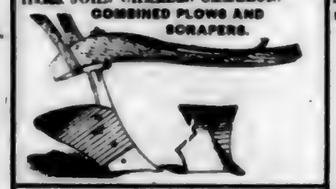
113,617. DR. BENJAMIN BATES.
ROOT OR TONIC BEER.



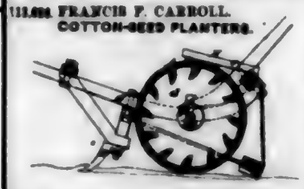
113,618. HORACE H. BIGELOW.
MACHINES FOR CUTTING LEATHER.



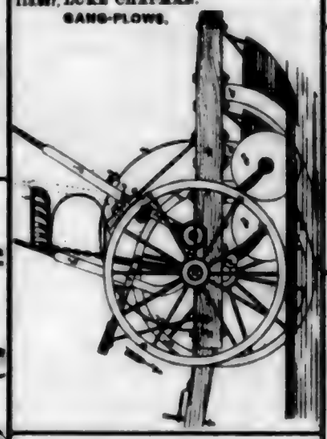
113,619. OTTO BOLDEMANN.
PERFUMING AND DISINFECTING APPARATUS.



113,620. GEORGE G. BOVEY.
AUTOMATIC FANS.

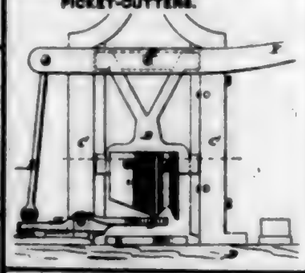


113,621. GEORGE G. BOVEY.
KEY-HOLE GUARDS.



113,622. JOHN CHARLES CAMERON.
COMBINED PLOWS AND SCRAPERS.

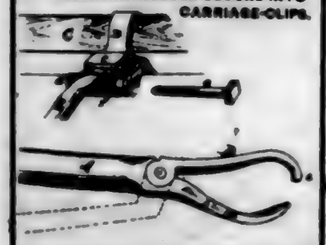
113,623. FRANCIS P. CARROLL.
COTTON-SEED PLANTERS.



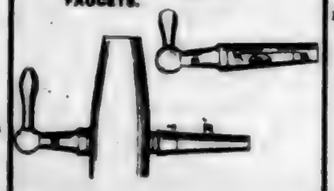
113,624. LUKE CHAPMAN.
GANG-PLOWS.

113,625. JOHN CIPPERLEY.
MASTIC ROOFING.

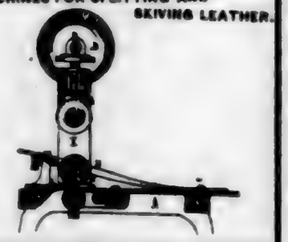
113,626. JAMES W. CLARK.
PICKET-CUTTERS.



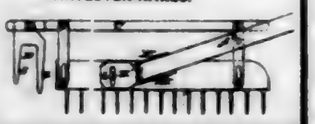
113,627. HENRY BRAUNHOLD.
CASKS FOR PASTE.



113,628. G. B. BROAD. SHAWL-STRAPS.



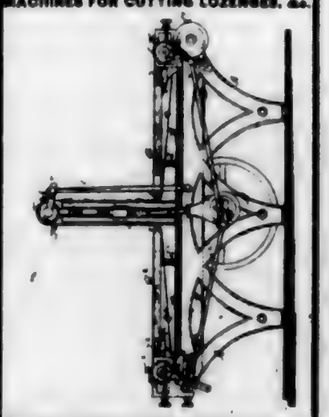
113,629. THOMAS H. BROWN.
CHAS. B. GILMAN.
APPARATUS FOR COMPRESSING AND INSERTING RUBBER BLOCKS INTO CARRIAGE-CLIPS.



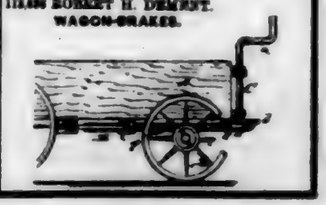
113,630. JOHN S. CLUTE.
HENRY W. TRIMMER.
WALTER D. TRIMMER.
FAUCETS.

113,631. ALEXANDER COCHRAN.
MACHINES FOR SPLITTING AND SKIVING LEATHER.

113,632. O. B. COLCORD.
HARVESTER-RAKES.



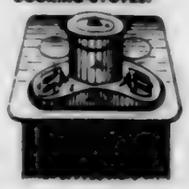
113,633. JOSEPH B. CRABILL.
CONNECTIONS FOR RAILWAY CARS.



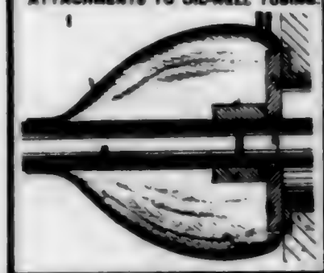
113,634. SILAS CRISPIN.
METALLIC CARTRIDGES.

113,635. WILLIAM EDWARD DAMANT.
MACHINES FOR CUTTING LOZENGES, &c.

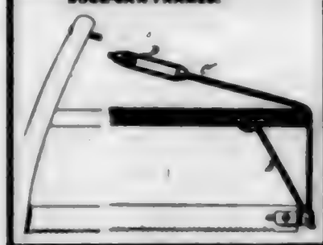
113,636. ROBERT H. DEMENT.
WAGON-BRAKES.



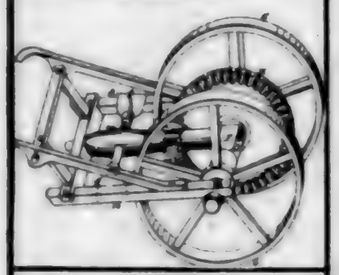
113,637 DANIEL M. DENDON
STALLS FOR HORSES.



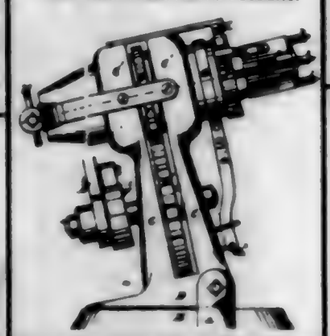
113,638 ISAAC T. DYER.
MOLD-BOARDS FOR PLOWS.



113,639 JAMES EASTERLY.
COOKING-STOVES.

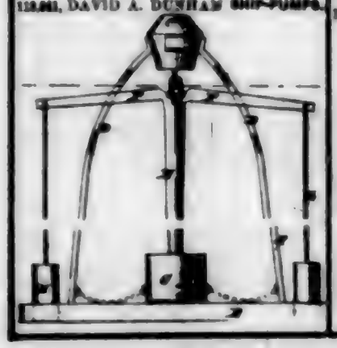


113,640 WILLIAM W. DEWEY.
ATTACHMENTS TO OIL-WELL TUBING.

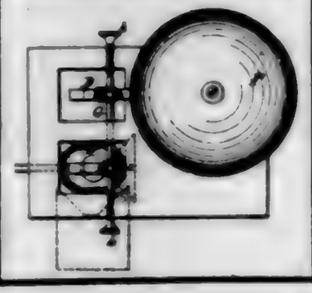


113,641 JEROME C. DIETRICH.
BUCK-SAW FRAMES.

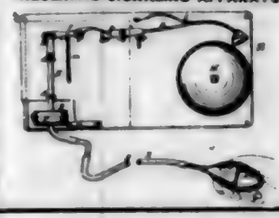
113,642 CHARLES BRYANT DOUGLAS.
COTTON-CHOPPERS.



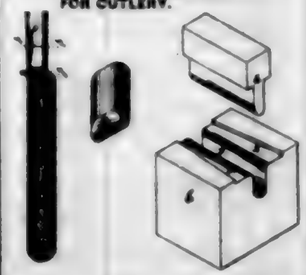
113,643 DAVID J. FARMER.
NAIL AND TACK-PLATE FEEDERS.



113,644 VALENTINE FOGERTY.
NON-FREEZING WATER-PIPES.

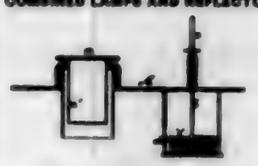


113,645 DAVID A. DUNHAM SHIP-PUMPS.

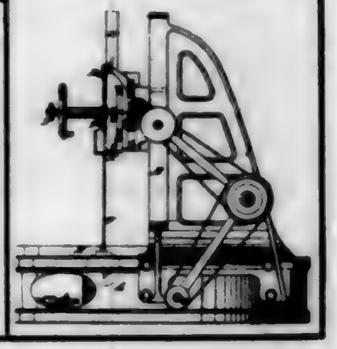


113,646 WM. FOSTER, Jr.
PNEUMATIC SIGNALING APPARATUS.

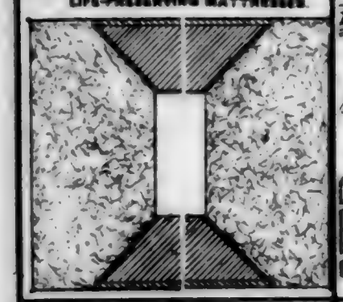
113,647 WM. FOSTER, Jr.
PNEUMATIC SIGNALING APPARATUS.



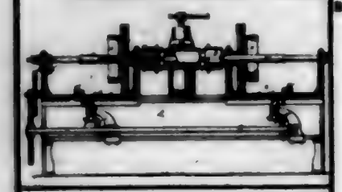
113,648 JAMES D. FRARY.
MANUFACTURE OF BOLSTERS FOR CUTLERY.



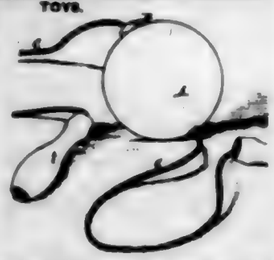
113,649 JOHN E. GAMEWELL.
FIRE-ALARM TELEGRAPH APPARATUS.



113,650 HENRY J. GOFF.
COMBINED LAMPS AND REFLECTORS.

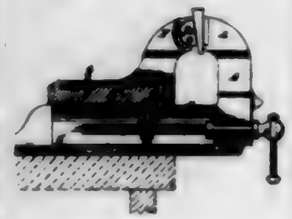


113,651 G. A. GRAY, Jr.
TURNING AND BORING-MILLS.



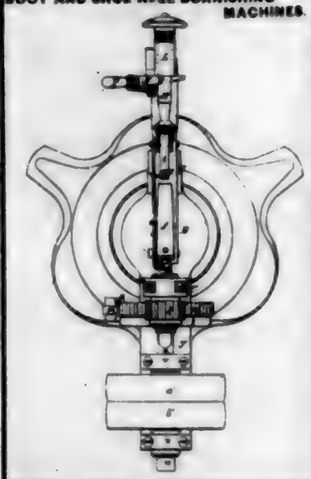
113,652 J. DURELL GREENE.
LIFE-PRESERVING MATTRESSES.

113,653 JOHN GRIFFITH.
G. W. WUNDRAM.
MACHINES FOR FACING T-HEADS.



113,654 JOHN HAMILTON HARRISON.
TOYS.

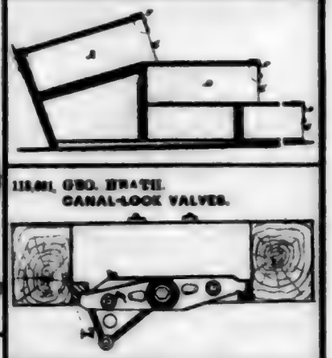
113,655 WILLIAM HENRY HARDING.
GEORGE FREDERIC MOSER.
DUMPING-CARS.



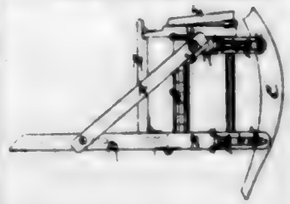
113,656 WILLIAM P. HARWOOD.
VISES.

113,657 HENRY P. HASKIN.
FARM-GATES.

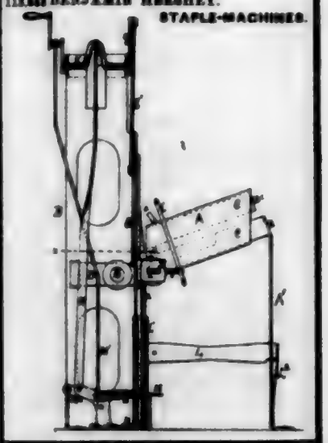
113,658 GARDNER G. HAWKINS
ALBERT G. MEAD
KIMBALL SPEAR,
BOOT AND SHOE HEEL BURNISHING MACHINES.



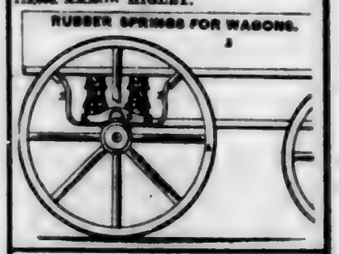
113,659 JAMES HAYDEN.
SHIRTS.



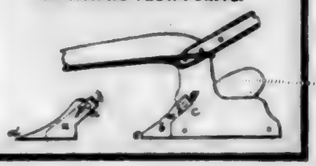
113,660 GEORGE A. HEARN, Jr.
SHOW-CASES.



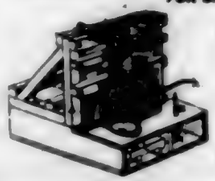
113,661 GEO. HEATH.
CANAL-LOCK VALVES.



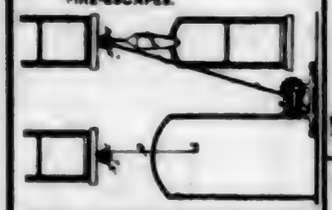
113,662 GABRIEL D. HEATWOLE.
CHAIRS AND BEDS COMBINED.



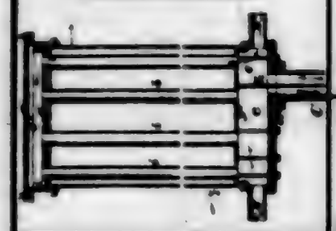
113,663 BENJAMIN HERSHEY.
STAPLE-MACHINES.



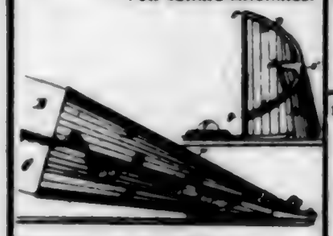
113,664 AARON HIGLEY.
RUBBER SPRINGS FOR WAGONS.



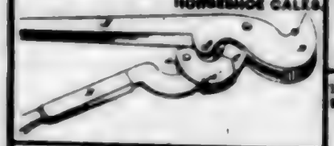
113,665 G. W. HILDRETH.
ATTACHING PLOW-POINTS.



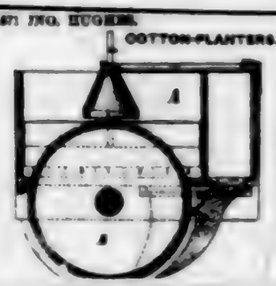
113,666. GEORGE W. HINKLEY.
MACHINES FOR SAPPING TIMBER FOR SHINGLES.



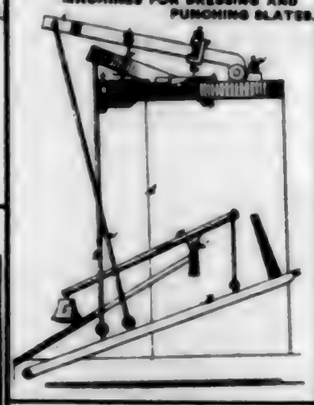
113,667. JOSEPH HOEFLINGER.
FIRE-ESCAPES.



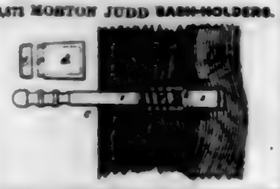
113,668. BIRDSILL HOLLY.
SURFACE-CONDENSERS.



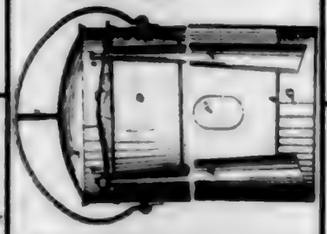
113,669. ELIJAH LEAVITT HOWARD.
RUFFLE-GUIDES AND SAND-FOLDERS FOR SEWING-MACHINES.



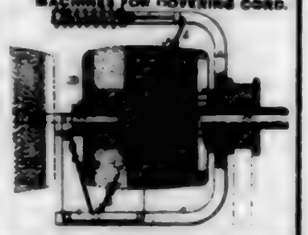
113,670. HAMILTON HOWELL.
MACHINES FOR SHARPENING HORSESHOE CALKS.



113,671. JNO. HUGHES.
COTTON-PLANTERS.



113,672. JULIUS JABOER.
MACHINES FOR DRESSING AND PUNCHING SLATES.



113,673. MORTON JUDD SASH-HOLDERS.

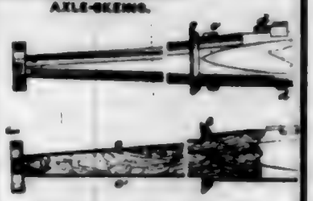
113,674. RICHARD H. KUPER.
COFFEE-POTS.

113,675. REUBEN LEWIS.
MACHINES FOR COVERING CORD.

113,676. JACOB LINDENFELTER.
MILLSTONE EXHAUSTS.

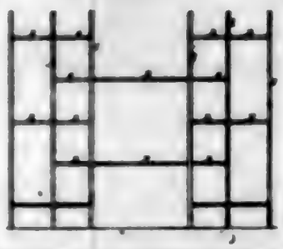
113,677. CHAS. W. LOVETT, Jr.
SHOT-CARTRIDGES.

113,678. PETER LUGENBELL.
WILLIAM A. FORD.
SLATE-FRAMES.

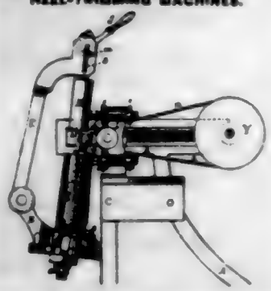


113,679. JOHN J. LUNDY.
LUBRICATING WOOL DURING THE PROCESS OF MANUFACTURE.

113,680. JOHN T. LYNAM. BIT-BRACES.

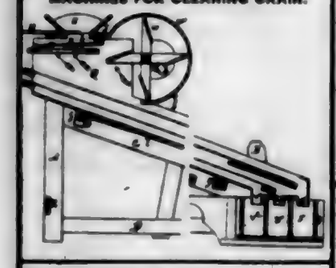


113,681. ORENZO MAYHEW.
AXLE-SKEINS.

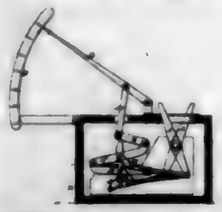


113,682. ROBERT W. McCLELLAND.
WHEELS FOR VEHICLES.

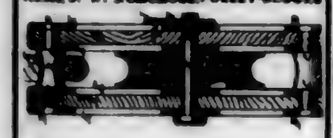
113,683. SOPHIA H. MERCER.
EXTENSIBLE SHELVING.



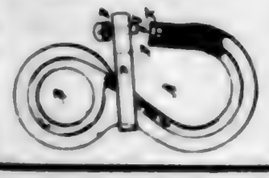
113,684. JOHN Q. MOULTON.
HEEL-TRIMMING MACHINES.



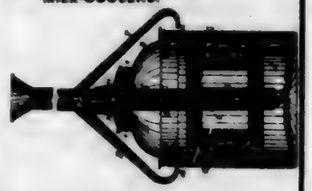
113,685. JOHN W. MURPHY
LUBRICATING PIVOTS FOR TURN-TABLES.



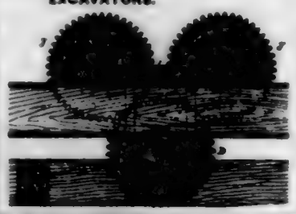
113,686. MOSES T. NESBITT.
MACHINES FOR CLEANING GRAIN.



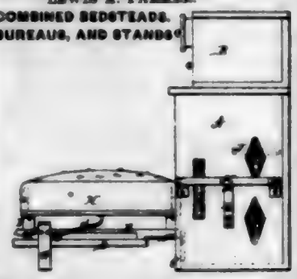
113,687. ARCHIBALD NIMMO.
MECHANICAL MOVEMENTS.



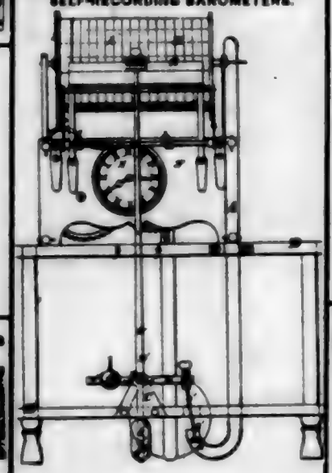
113,688. J. W. NORCROSS, PULLEY-BLOCKS



113,689. JOSEPH W. NORCROSS.
TACKLE-HOOKS.



113,690. ALBERT NORTHROP.
MILK-COOLERS.



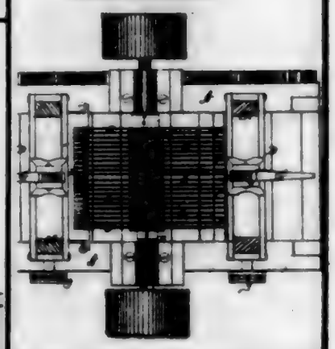
113,691. JASON C. OSGOOD.
EXCAVATORS.

113,692. ANNA PARKER.
LEWIS A. PARKER.
COMBINED BEDSTEADS, BUREAUS, AND STANDS.

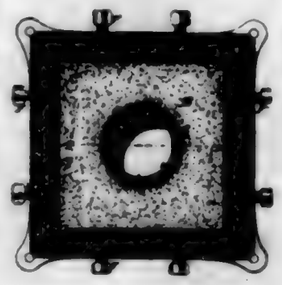
113,693. DAVID PERLOR.
SELF-RECORDING BAROMETERS.

113,694. WILLIAM L. PHILLIPS.
STOVE-PIPE DRUMS.

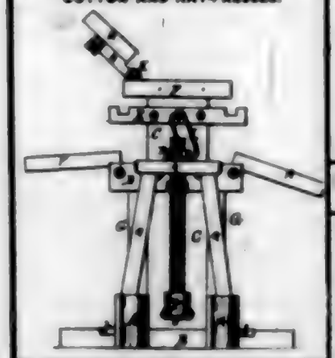
113,695. JOHN H. PUTMAN. GLOVES.



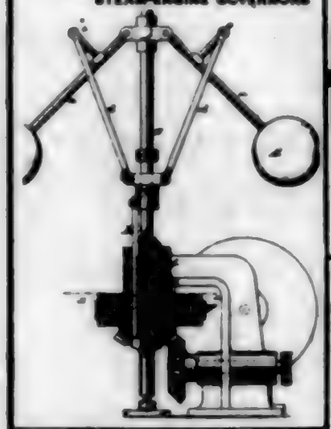
113,696. SAMUEL L. REYNOLDS.
JOHN W. REYNOLDS.
WHIFFLETREES.



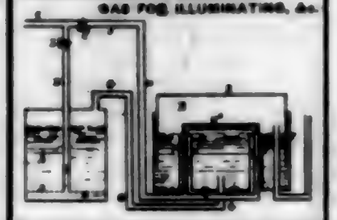
113,697. GEORGE RUMSEY.
SLIDING-DOOR HANGERS.



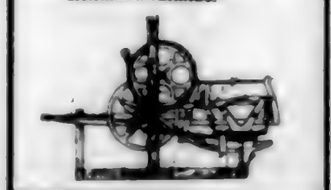
113,698. SAML. S. SHERMAN.
H. B. GUNN.
SAWING-MACHINES.



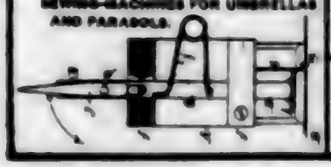
113,699. JOHN JOB. CHAS. SMITH.
DIES FOR TAKING IMPRESSIONS FROM CLOTH, &c.



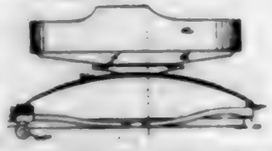
113,700. REUBEN STALLION. COTTON AND HAY-PRESSES.



113,701. SAML. STANTON. VARIABLE ECCENTRICS FOR STEAM-ENGINE GOVERNORS.

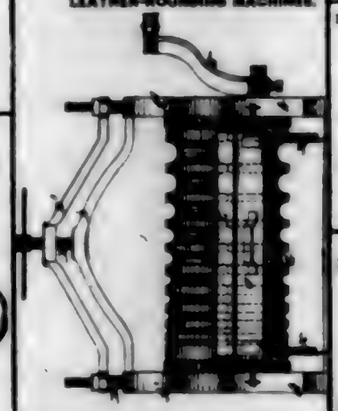


113,702. J. W. STOW. MANUFACTURE OF PNEUMATIC GAS FOR ILLUMINATING, &c.

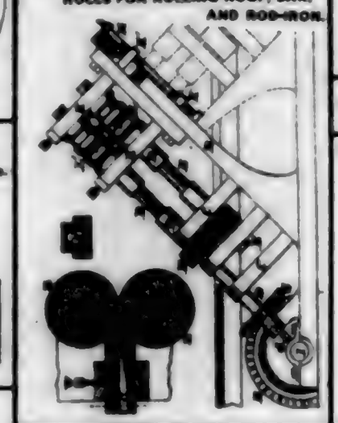


113,703. JEROME B. SWEETLAND. SAWING-MACHINES.

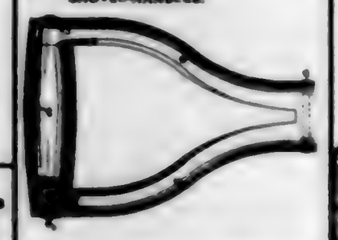
113,704. WM. J. TATE. SEWING-MACHINES FOR UMBRELLAS AND PARASOLS.



113,705. CHAUNCEY THOMAS. CARRIAGES.

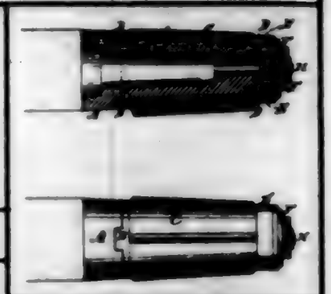


113,706. NATHAN H. THOMAS. PRESERVING WOOD.

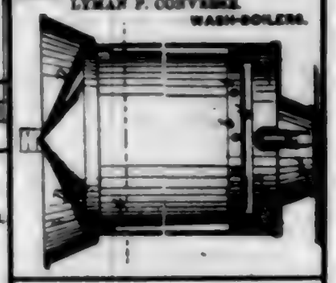


113,707. JAMES H. TIMMINS. LEATHER-ROUNDING MACHINES.

113,708. JAMES TRANTER. JOSEPH KIRKBY. ROLLS FOR ROLLING HOOP, BAR, AND ROD-IRON.

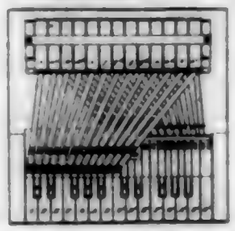


113,709. HENRY C. TRASK. SHOVEL-HANDLES.

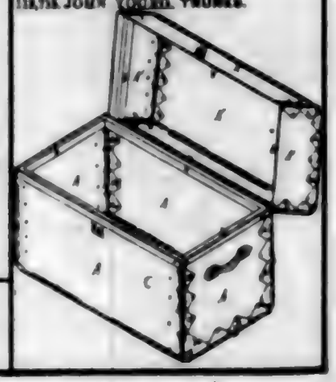


113,710. JAMES MONROE WALTERS. HASON-SPINDLES.

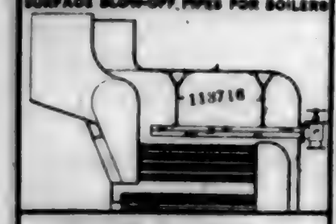
113,711. STEWART WATT. STOVE UTENSIL-HOLDERS.



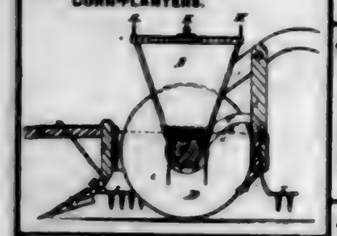
113,712. W. A. WELLS. LYMAN P. CONVERSE. WASH-BOILERS.



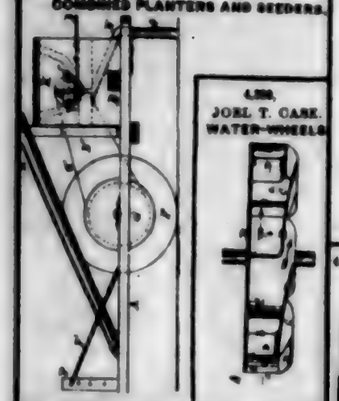
113,713. SAMUEL B. WHITLOW. MEDICAL COMPOUNDS OR BITTERS.



113,714. GEORGE W. WOODRUFF. REED-ORGANS.

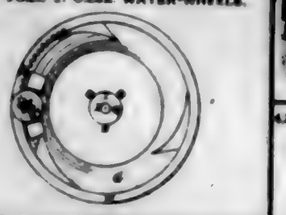


113,715. JOHN TOLEDO. TRUNKS.

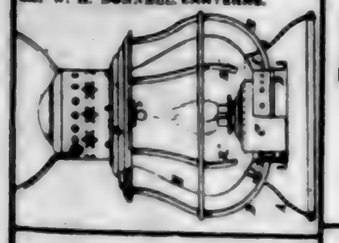


113,716. JAMES PERKINS. SURFACE BLOW-OFF PIPES FOR BOILERS.

113,717. GEORGE W. LEWIS. CORN-PLANTERS.



113,718. SAMUEL HIBSTAND. COMBINED PLANTERS AND SEEDERS.

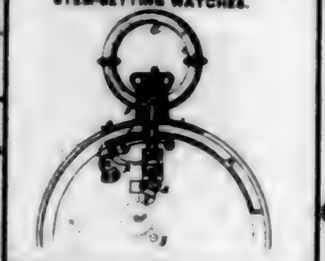


4,339. JOEL T. CASE. WATER-WHEELS.

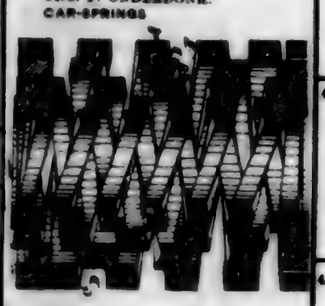
4,339. JOSEPH ALBERT. PRINTING PHOTOGRAPHS.

4,339. JOEL T. CASE WATER-WHEELS.

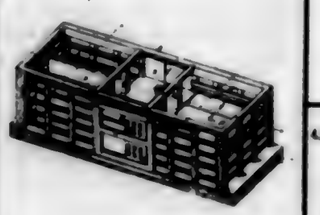
4,331. W. H. BONNELL. LANTERNS.



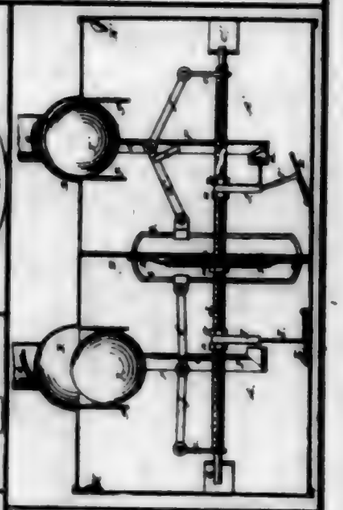
4,332. W. H. BONNELL. LANTERNS.



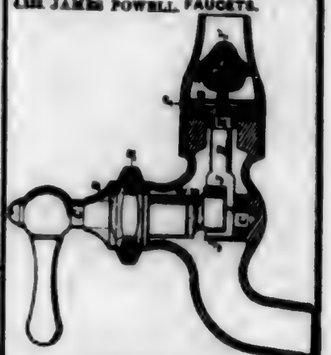
4,332. WILLIAM W. DRAPER. TOOL-HOLDERS.



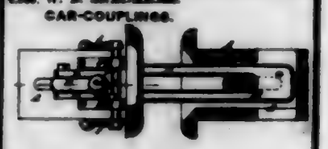
4,334. JULES JURGENSEN. STEM-SETTING WATCHES.



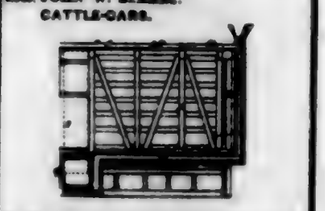
4,335. ALBERT HESBARD. JNO. P. ONDERDONK. CAR-SPRINGS.



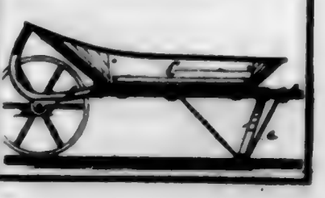
4,336. WILLIAM SWEARINGEN. STOCK-CARS.



4,337. JOHN S. PATRIC. AIR-COMPRESSING APPARATUS.



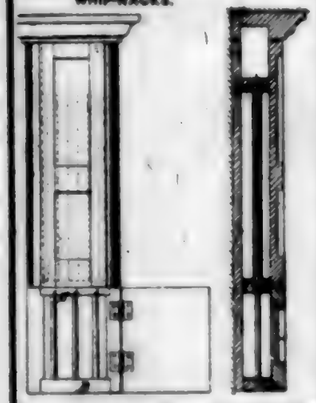
4,338. JAMES POWELL. FAUCETS.



4,340. W. B. SHEDAKER. CAR-COUPLINGS.

4,340. JOHN W. STRENT. CATTLE-CARS.

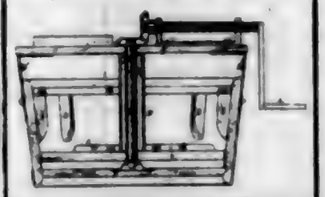
4,341. BECKWITH W. TUTHILL. WHEELBARROW-FRAMES.



ILLUSTRATIONS OF PATENTS

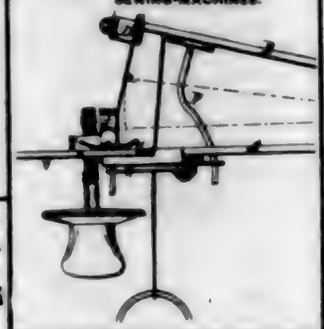
ISSUED FROM

THE UNITED STATES PATENT OFFICE

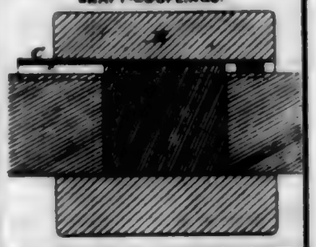


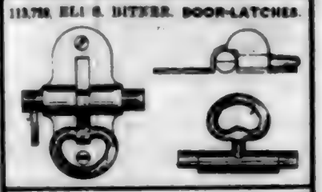
APRIL 18, 1871.

113,719. ROBERT J. ANDERSON. WHIP-RACKS.

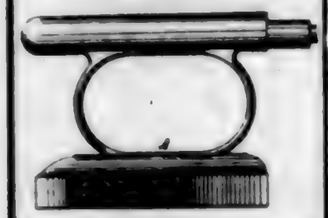


113,720. GEO. S. BARTON. EXPANDING PULLEYS.

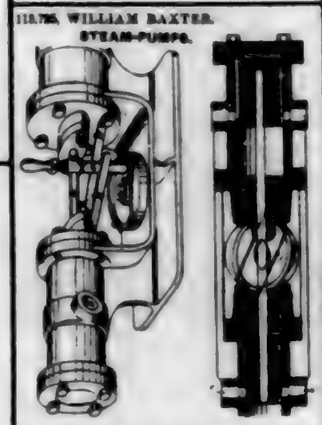




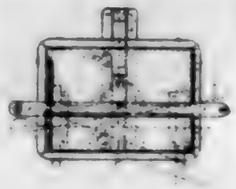
113,721. WILLIAM G. BROKWITH. SEWING-MACHINES.



113,722. JAMES H. BLESSING. SHAFT-COUPLINGS.

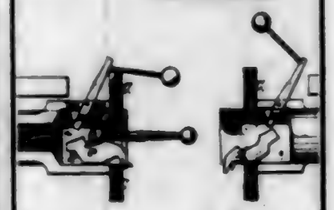


113,723. ELI S. BITNER. DOOR-LATCHES.

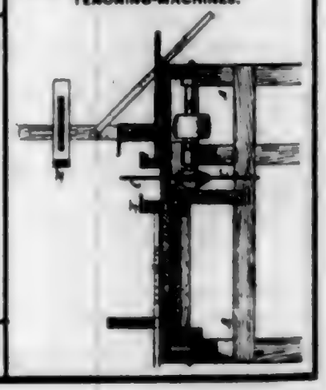


113,724. AARON E. ARMSTRONG. CHARLES S. DUDLEY. SMOOTHING AND RUFFLE-IRONS.

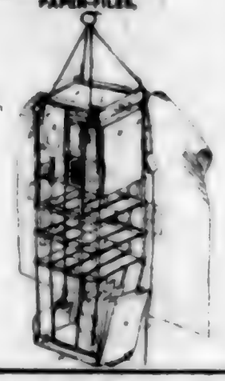
113,725. WILLIAM BAXTER. STEAM-PUMPS.



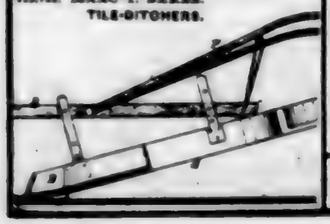
113,726. THEODORE BERGNER. RULER ATTACHMENTS FOR DRAWING-BOARDS.



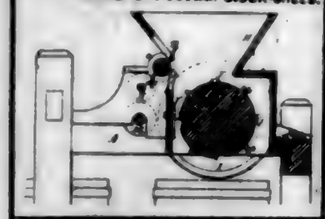
113,727. CHARLES HEELSTON BERRY. WASHING-MACHINES.



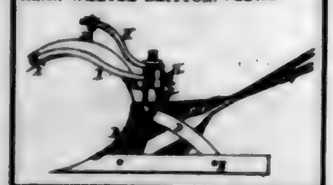
113,728. LYCURGUS J. BOSWORTH. CAR-COUPLINGS.



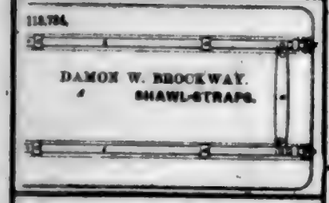
113,729. MELTON S. BOURLAND. TENONING-MACHINES.



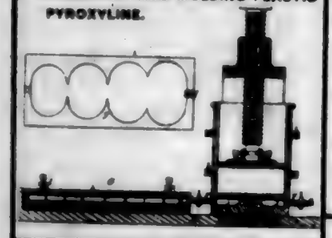
113,731. ALBERT BAKER. PAPER-FILES.



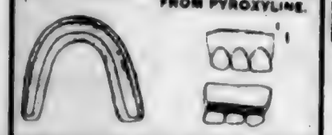
113,730. ISAAC T. BAKER. TILE-DITCHERS.



113,732. JESSE BOWEN. AARON T. FOSTER. CIDER-MILLS.



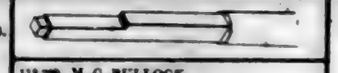
113,733. WALTER BRITTON. PLOWS.



113,734. DAMON W. BROCKWAY. SHAWL-STRAPS.

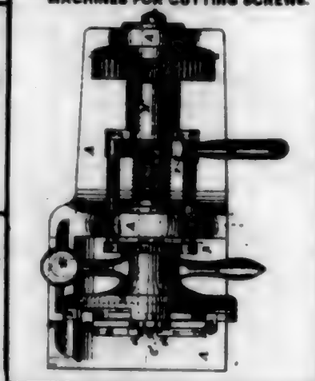
113,735. JOSEPHUS BROCKWAY. APPARATUS FOR COMPRESSING, STRAINING, AND MOLDING PLASTIC PYROXYLINE.

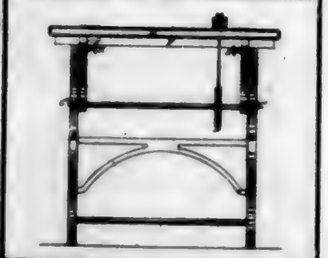
113,736. JOSEPHUS BROCKWAY. MANUFACTURE OF DENTAL-PLATES FROM PYROXYLINE.



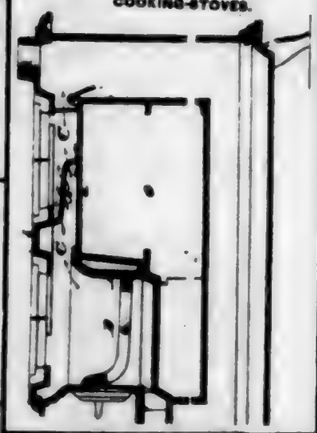
113,737. PETER BROOKS. MACHINES FOR PUNCHING CORSET-SPRINGS.

113,738. LEVERETT BROWN. THE MODES OF ATTACHING TOPMASTS AND TOP-GALLANT-MASTS.





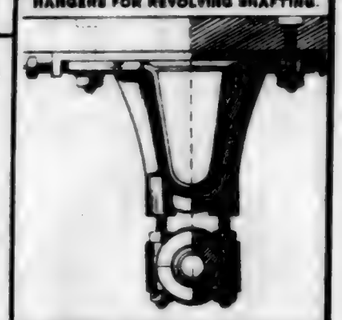
113,739. M. C. BULLOCK. SELF-CENTERING BOXES OR BEARINGS.



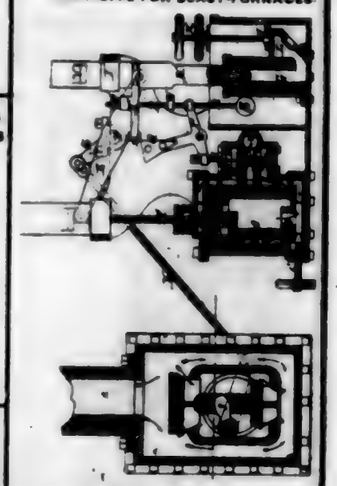
113,740. JAMES M. CARPENTER. MACHINES FOR CUTTING SCREWS.

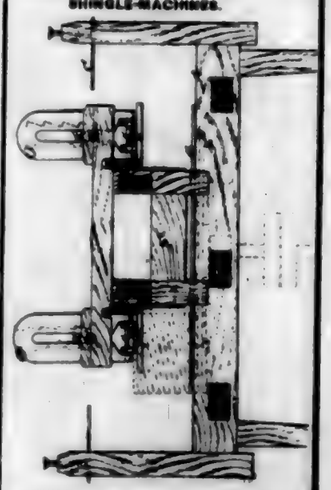
113,741. EDWIN CHESTERMAN. TABLES FOR SEWING AND KNITTING-MACHINES.

113,742. FRANKLIN CLEMENT. COOKING-STOVES.

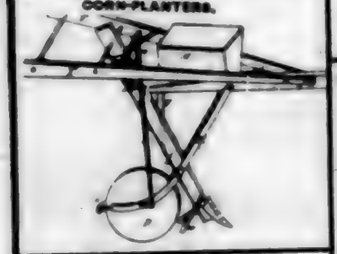


113,743. AUBY G. COBB. THE MODES OF FORMING THE HEADS OF WRENCH-BARS.



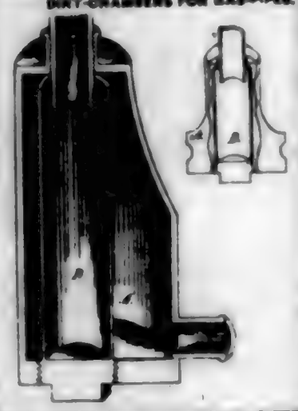


113,744. ALFRED B. COUCH. HANGERS FOR REVOLVING SHAFTING.

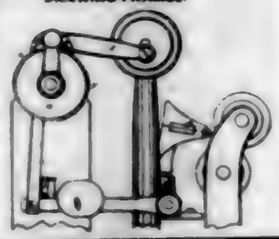


113,745. HENRY DAVIES. CUT-OFFS FOR BLAST-FURNACES.

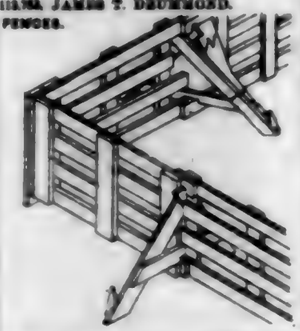
113,746. JAMES DECKER. SHINGLE-MACHINES.



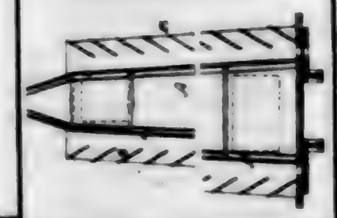
113,747. J. DYSON DELAP.
CORN-PLANTERS.



113,748. GEORGE B. DEXTER. SCARFS.



113,749. MARTIN B. DIAL.
DIRT-CHAMBERS FOR GAS-PIPES.



113,750. GEORGE DRAPER.
DRAWING-FRAMES.

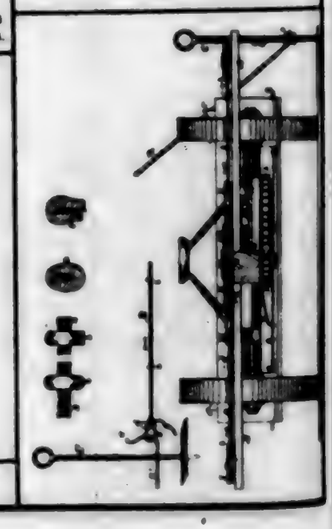
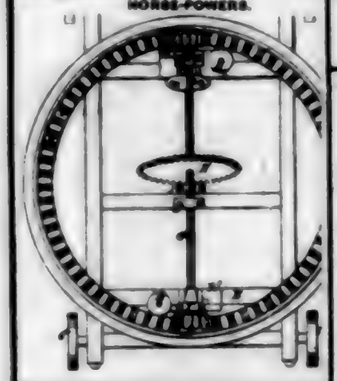
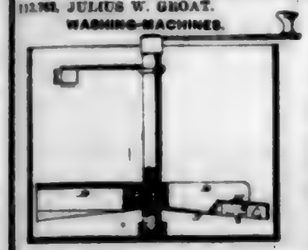
ORNAMENTATION OF METAL, GLASS.



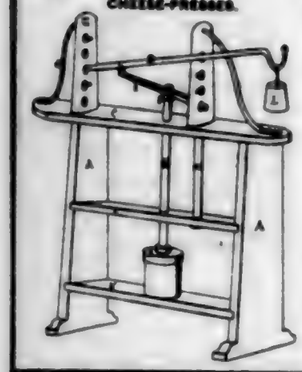
113,756. THOMAS J. GIFFORD.
SCUTTLE FASTENINGS.



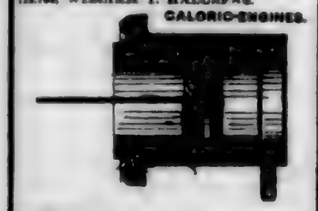
113,757. JOSEPH S. GODFREY.
REVOLVING MOLD-BOARDS FOR PLOWS.



113,758. WILLIAM W. DINGEE.
HORSE-POWERS.



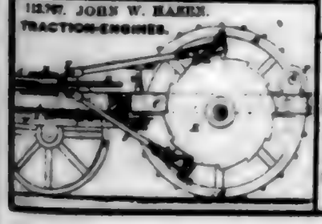
113,759. LOUIS DOVELL.
BOTTLE-STOPPERS.



113,762. JULIUS W. GROAT.
WASHING-MACHINES.

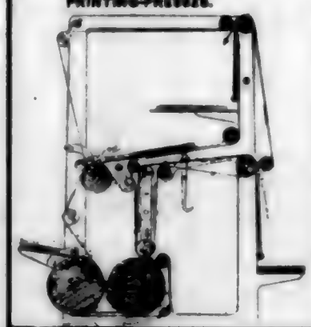
113,763. CHARLES L. HAINES.
CHEESE-PRESSES.

113,764. WILLIAM T. HALLEPAS.
CALORIC-ENGINES.

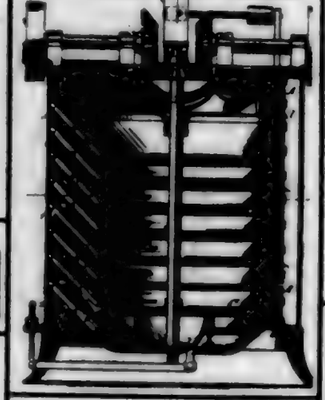


113,765. JOHN R. HARRINGTON.
CARPET-LININGS.

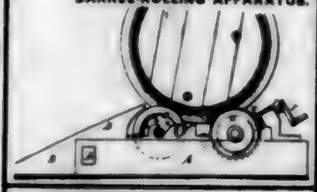
113,766. BENJ. HAVILAND.
GEO. P. GUNN.
PARLOR AIR-PISTOLS.



113,767. JOHN W. HAMEN.
TRACTION-ENGINES.

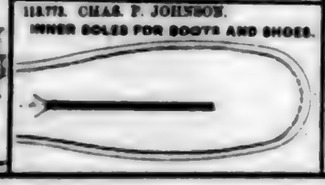


113,768. ALBERT HEBBARD.
CAR-SPRINGS.

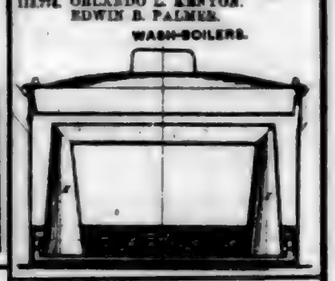


113,769. RICHD. M. HOE.
PRINTING-PRESSES.

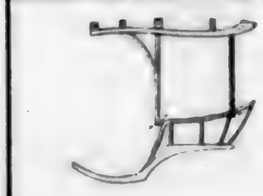
113,770. MICHAEL HOFFMANN.
GRAIN-HULLING MACHINES.



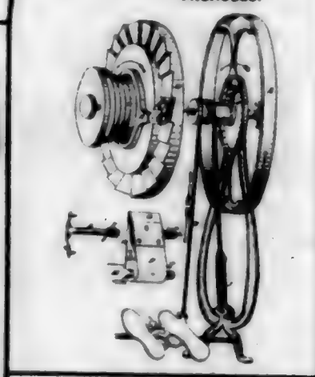
113,771. LEWIS L. HYATT.
ADOLPH O. HÜPPEL.
BARREL-ROLLING APPARATUS.



113,772. ELIAS INGRAHAM
THE APPLICATION OF BRONZE AND GILDING TO PLATE GLASS.

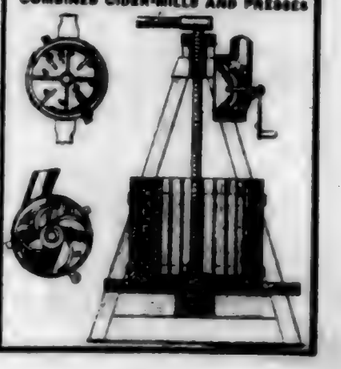


113,773. CHAS. P. JOHNSON.
INNER SOLES FOR BOOTS AND SHOES.

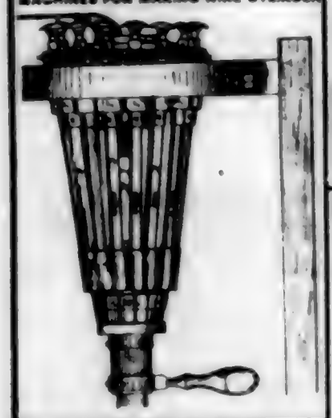


113,774. ORLANDO L. KENYON.
EDWIN B. PALMER.
WASH-BOILERS.

113,775. CHARLES P. KIMBALL.
SHIFTING TOPS FOR BASKET-PHAETONS

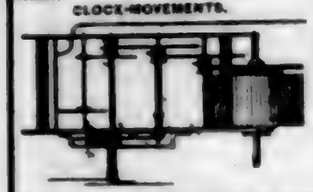


113,776. GEO. BYRON KIRKHAM.
TREADLES.



113,777. MILTON W. KIRKWOOD.
SOLOMON H. RILEY. HOPS.

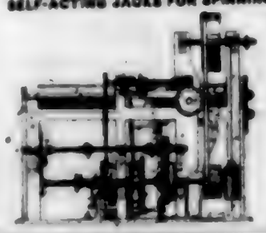
113,778. DANIEL H. KRAUSER.
COMBINED CIDER-MILLS AND PRESSES



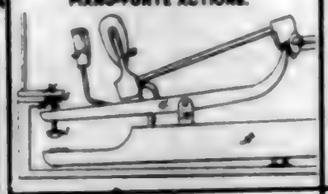
113,779. CYRUS H. LATHAM.
MACHINES FOR MAKING WIRE CYLINDER

113,780. CHRISTOPHER P. LAWTON.
NECK-TIE RETAINERS.

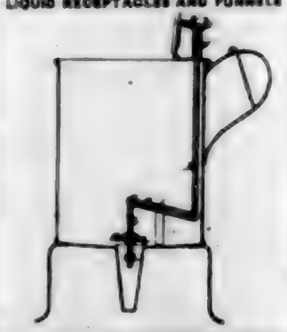
113,781. BENJAMIN R. LEWIS.
CLOCK-MOVEMENTS.



113,782. ROBERT G. LOFTUS.
PURIFICATIONS OF OILS AND FATS BY ACIDS.

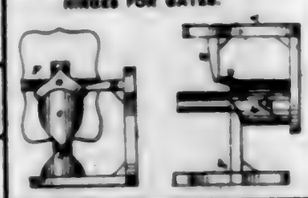


113,783. DONALD D. MACKAY.
CYRUS BUTLER.
PLUMBAGO OIL-CANS.

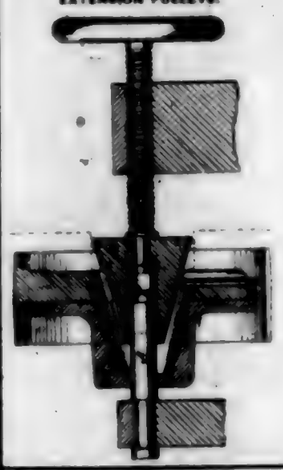


113,784. PETER McGOVERN.
SELF-ACTING JACKS FOR SPINNING.

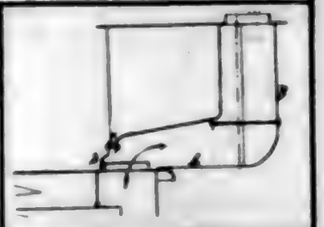
113,785. F. S. McGREGOR.
PIANO-FORTE ACTIONS.



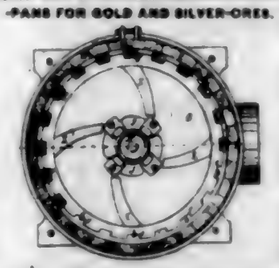
113,786. WILLIAM H. MUMLER.
LIQUID RECEPTACLES AND FUNNELS



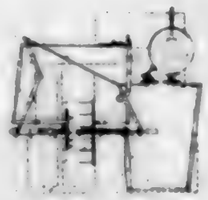
113,787. TOBIAS NEW. WATER-PROOF FLOORS.



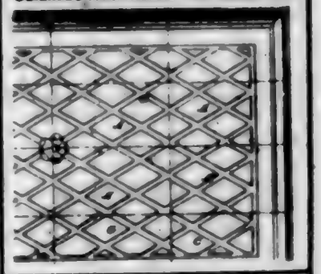
113,788. EDWIN D. NORTON.
HINGES FOR GATES.



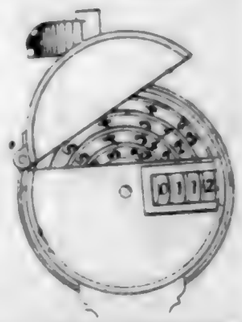
113,789. WILLIAM ONIONS.
ISAAC HAGNALL.
EXTENSION PULLEYS.



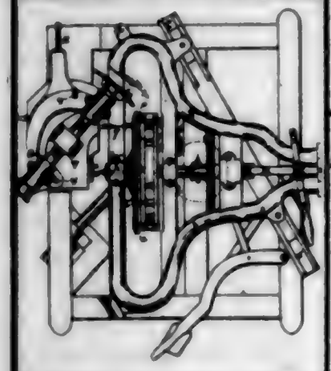
113,790. DANL. B. PARIS.
COOKING-STOVES.



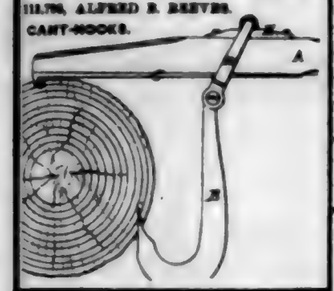
113,791. IRA S. PARKS, AMALGAMATING PANS FOR GOLD AND SILVER-ORES.



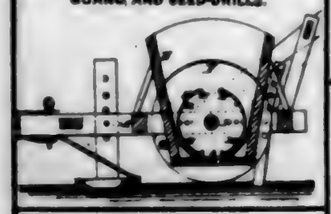
113,792. PREVIER A. PERRY.
GRAIN-BINDERS.



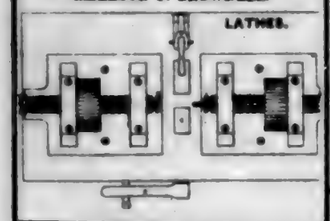
113,793. CHARLES H. POOLE.
CEILINGS AND WALLS FOR BUILDINGS.



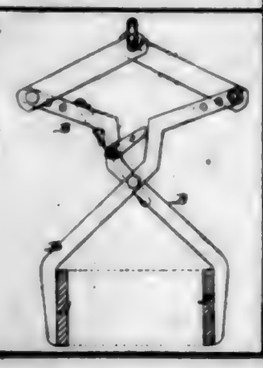
113,794. CHARLES W. PYLE.
COUNTING-REGISTERS.



113,795. JOHN JACKSON RALYA.
MACHINES FOR TURNING BARREL-HEAD

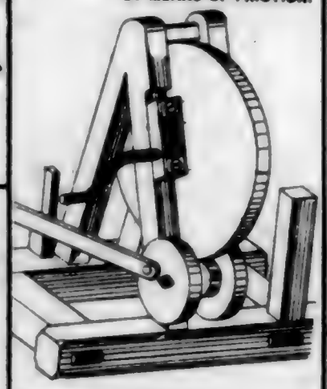


113,796. ALFRED B. REEVES.
CANT-HOOKS.

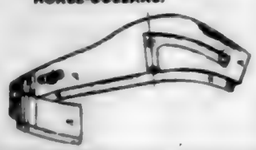


113,797. LEONIDAS M. RHODES.
GUANO AND SEED-DRILLS.

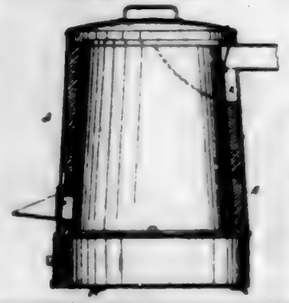
113,798. JOHN F. C. RIDER.
EMERSON P. BROWNELL.
LATHES.



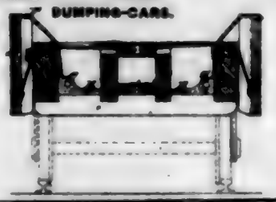
113,799. E. JULIUS RUGG.
BRICK-LIFTERS



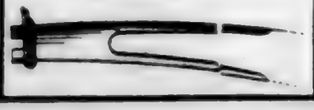
113,800. NATHANIEL RUSSELL.
PLANING-TOOLS.



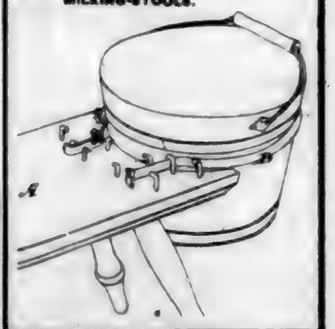
113,801. RICHARD SAMMER.
APPARATUS FOR CONVERTING ROTARY INTO RECIPROCATE MOTION BY MEANS OF FRICTION.



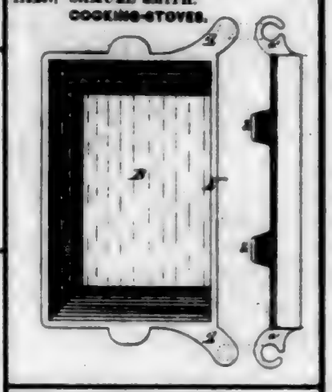
113,802. JOHN W. SCHWAFER.
HORSE-COLLARS.



113,803. CONRAD SEIMEL.
SOLDERING-FURNACES.

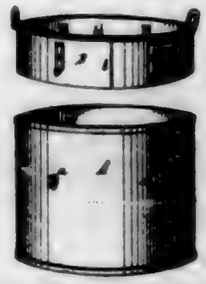


113,804. WM. A. SHARP.
DUMPING-CARS.

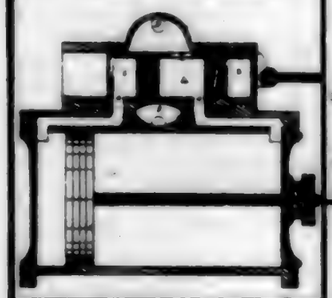


113,805. DOLPHIN G. SMITH.
FERRULES.

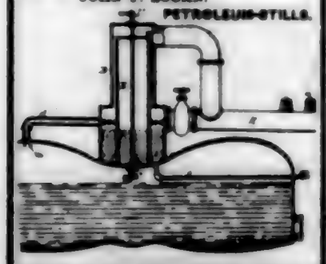
113,806. GEORGE SMITH.
MILKING-STOOLS.



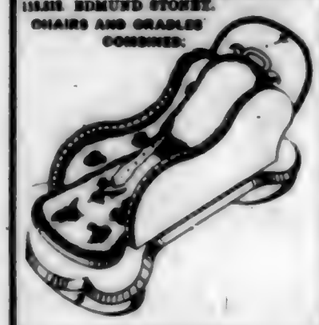
113,807. SAMUEL SMITH.
COOKING-STOVES.



113,808. J. M. SPRING.
HOOKS FOR BIRD-CAGES.

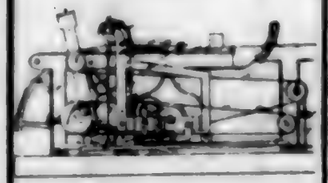


113,809. WILLIAM STERNBERG.
CHEESE-HOOPS.

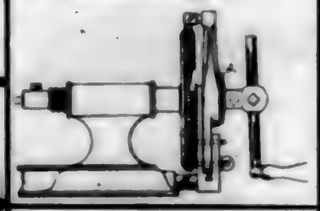


113,810. NATHAN PAGE STEVENS.
STEAM-ENGINE VALVES.

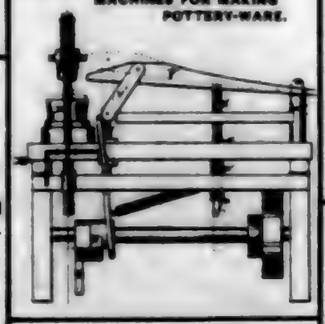
113,811. JOHN L. STEWART.
JOHN P. LOGAN.
PETROLEUM-STILLS.



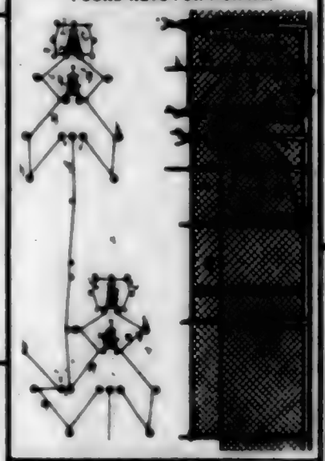
113,812. EDMUND STONEY.
CHAIRS AND CRADLES COMBINED.



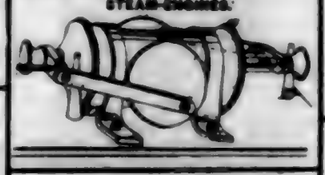
113,813. OLE O. STORLE.
HORSE HAY-RAKES.



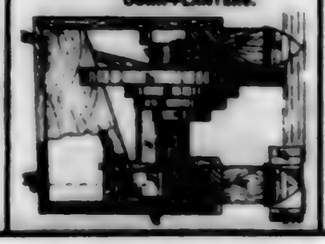
113,814. JAMES SUTHERLAND.
SELF-ACTING MULES FOR SPINNING.



113,815. GEO. C. TAFT.
DRILLING-MACHINES.

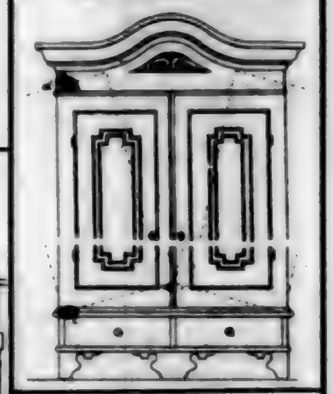


113,816. SAMUEL B. THOMPSON.
MACHINES FOR MAKING POTTERY-WARE.

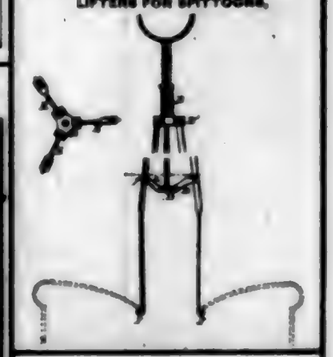


113,817. PATRICK S. TIERNAN.
POUND-NETS FOR FISHING.

113,818. SAMUEL D. TILLMAN.
STEAM-ENGINES.

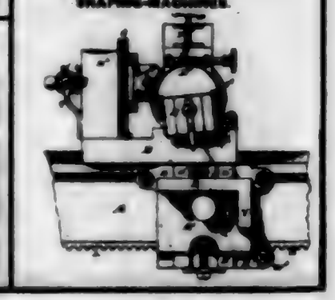


113,819. GRANVILLE J. VAUGHT.
CORN-PLANTERS.



113,820. GUILLAUME VIQUE.
DISINFECTING COMPOUNDS.

113,821. FERDINAND F. VOIGT.
WARDROBES AND BOOK-CASES.



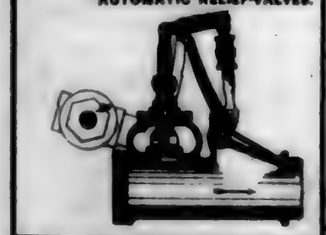
113,822. JAMES WALKER.
HENRY F. LILLY.
LIFTERS FOR SPITTOONS.

113,823. JOHN S. WARREN.
WATER-WHEELS.

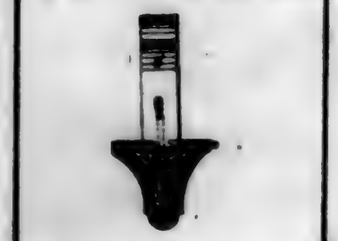
113,824. W. H. WARREN.
SHAPING-MACHINES.

113,825. CHARLES WEILER.
COMBS FOR COMBING-MACHINES.

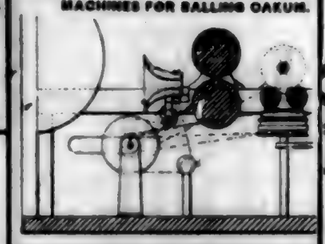
113,826. GEORGE W. WESLEY.
SELF-RELEASING CLUTCHES FOR WATER-WHEELS.



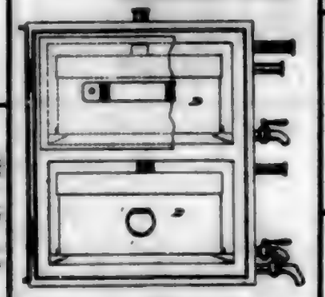
113,827. SAMUEL WHITAKER.
CASES FOR RIBBONS, LACES,



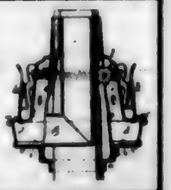
113,828. EDWIN A. WOOD.
TIME-INDICATORS FOR OFFICES.



113,829. ALBERT F. ALLEN.
AUTOMATIC RELIEF-VALVES.



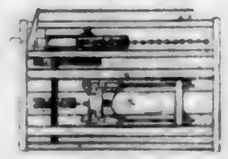
113,830. JOHN B. ANDERSON. PORTABLE ROLLERS FOR MOVING HEAVY BODIES.



113,831. SAMUEL GEORGE ARCHIBALD.
MACHINES FOR BALLING OAKUM.

113,832. JOHN ASHCROFT.
APPARATUS AND PROCESSES FOR TREATING COFFEE.

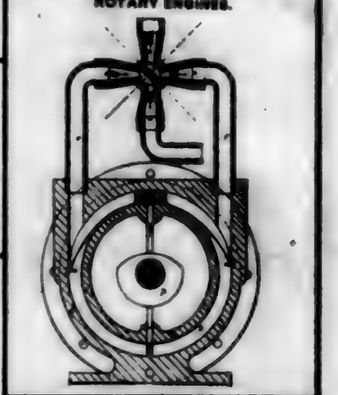
113,833. L. J. ATWOOD.
LAMP-BURNERS.



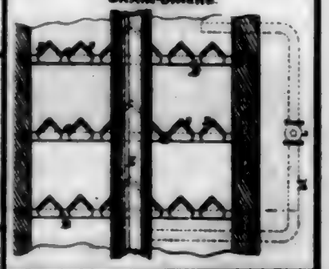
113,834. CLASP-FASTENERS FOR BAGS.
ALFRED HOLME BALCH
WOLFRED DAVID AMELIUS NELSON.

113,835. RICHD. BARTON.
TONGUE-AND-GROOVE JOINTS.

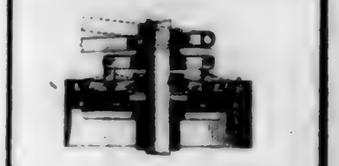
113,836. JAS. BATES.
HOISTING-MACHINES.



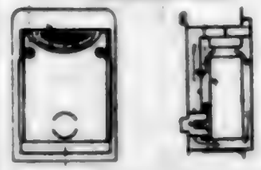
113,837. THOMAS VANDOLAH BAYLY.
HAY-ELEVATORS.



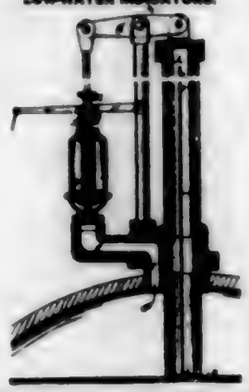
113,838. G. A. BEIDLER.
WOODEN PAVEMENTS.



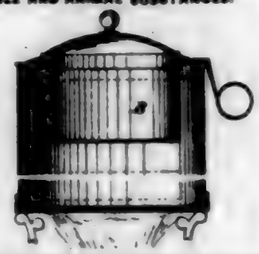
113,839. HENRY L. BENNISON.
ROTARY ENGINES.



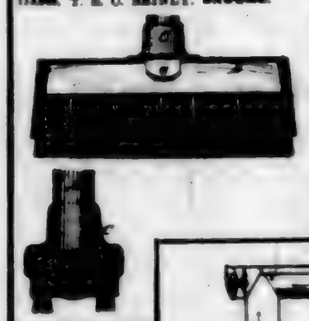
113,840. WILLIAM BLAKEY.
GRAIN-DRIERS.



113,841. JAMES H. BLEMING.
FRICTION-CLUTCHES FOR BELT-PULLEY

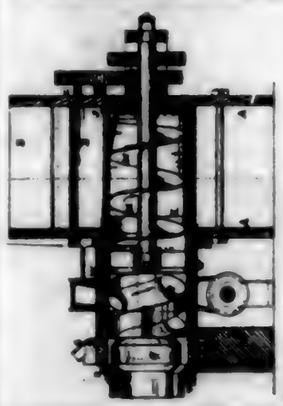


113,842. MARY ANN BOUGHTON.
COOKING-STOVES.

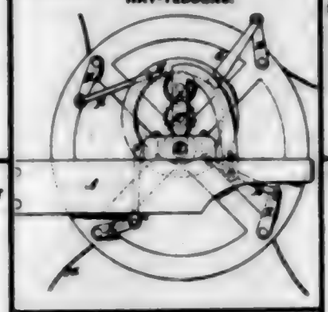


113,844. W. A. BRADFORD.
LOW-WATER INDICATORS.

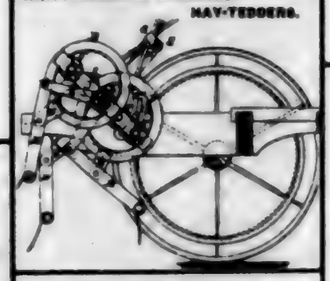
113,845. LOUIS BRAUER. APPARATUS FOR MAKING EXTRACTS FROM VEGETABLE AND ANIMAL SUBSTANCES.



113,847. T. E. C. BRINLY. BROOMS.

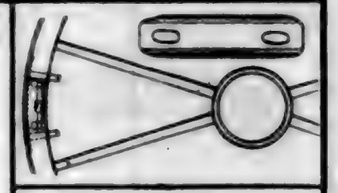


113,849. DOMINICUS BRIX.
COOKING-STOVES.

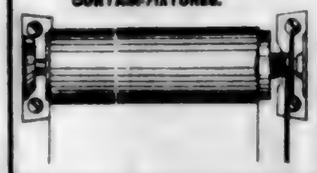


113,847. I. C. BRYANT. MACHINES FOR MAKING BRICKS AND TILES.

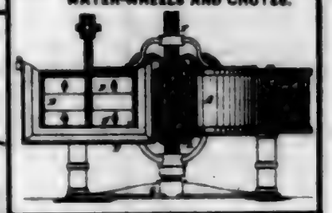
113,848. HIRAM M. BURDICK.
HAY-TEDDERS.



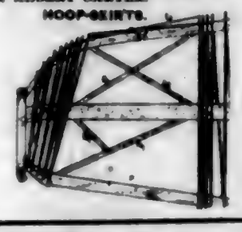
113,849. HIRAM M. BURDICK.
HAY-TEDDERS.



113,850. CHARLES BURLEIGH.
MACHINERY FOR DRILLING ROCKS



113,851. GARRETT G. W. BURNHAM.
CARRIAGE-WHEELS.



113,852. WM. CAMPBELL.

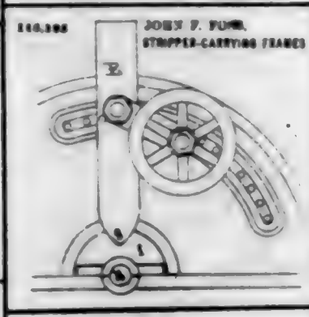
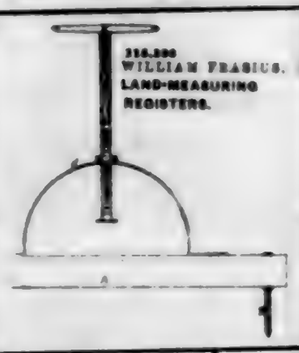
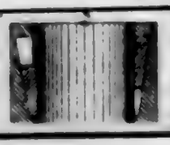
ERFELDING AND
ERFELDING.
FOLDING BOXES.



115,184
JOHN H. FLEMING.



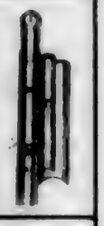
THILL-COUPLINGS.



115,185 JOHN F. FUHR.
STRIPPER-CARRYING FRAMES

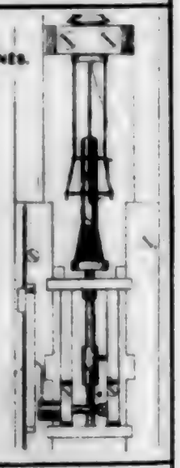
115,186
WILLIAM FRASIUS.
LAND-MEASURING
REGISTERS.

115,187
GIDEON FRISBEE,
ROCK-SPALLING
MACHINES.

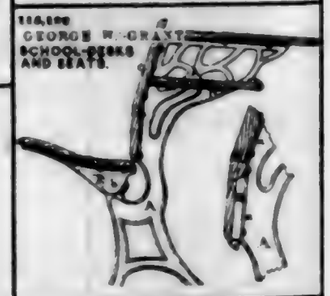


115,188 JOHN C. W. FRIEDMUTH.

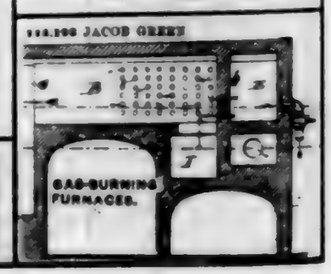
SAMPLE-BOXES FOR CIGARS.



115,189
GATES AND FRITCHEY
VAPOR-BURNERS.



115,190
WILLIAM P. GOODMAN.
PLATFORM-SCALES.



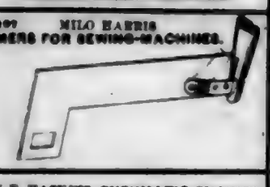
115,191
JOHN GOULDING.
SPINNING-MACHINES.

115,192
GEORGE W. GRANT.
SCHOOL-DESKS
AND SEATS.

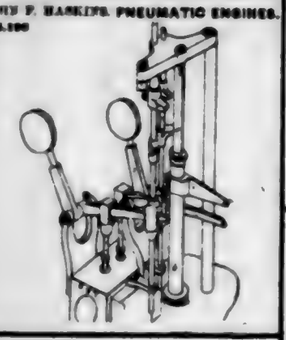
115,193 JACOB GREEN

GAS-BURNING
FURNACES.

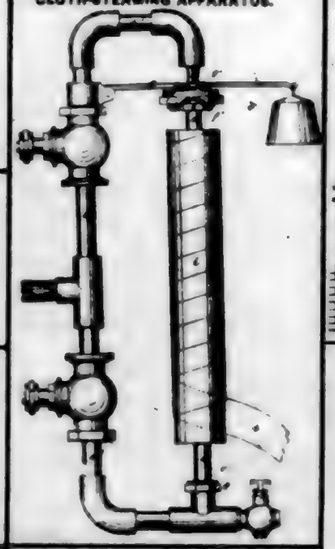
115,194 DAVID S. GRIFFEN.
TURNING AND CANTING LOGS.



115,195 WILLIAM HENRY GROVE.
SHOW-CASES.



115,196 JOHN HARRINGTON
DIES FOR FORGING AXLES.

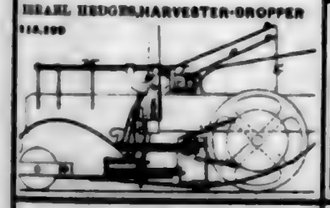


115,197 MILO HARRIS
HEMMERS FOR SEWING-MACHINES.

115,198 JOHN P. HASKINS. PNEUMATIC ENGINES.

115,199 LUKE M. HEERY.
CLOTH-STEAMING APPARATUS.

115,200 JOHN HELM.
BLEACHING RUBBER, GUTTA-PERCHA,



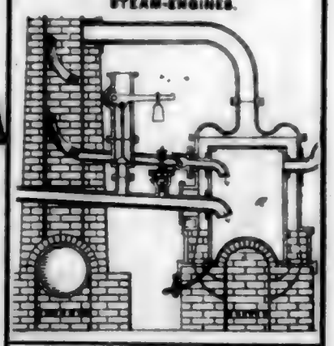
115,201 CONRAD HEYBACH.
PRESSES FOR FINISHING CLOTH,

115,202 REUBEN W. HEYWOOD.
PROPULSION OF VESSELS.

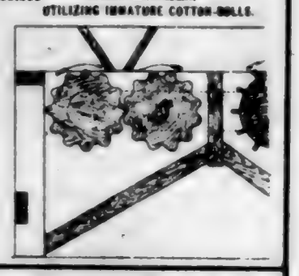
115,203 HIRAM HEDGES, HARVESTER-DROPPER

JOSEPH B. RICE
FIRE-KINDLER

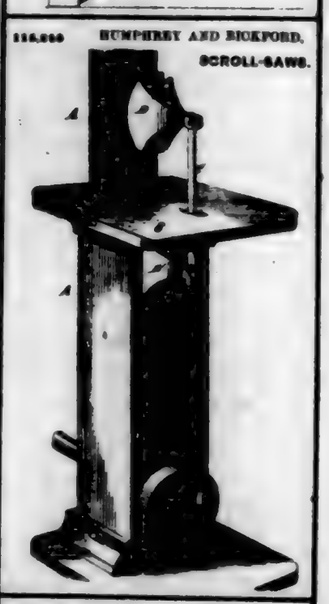
115,205
AUGUSTUS L.
HOLMANDE.
HEELS FOR BOOTS
AND SHOES.



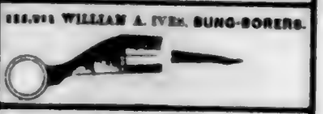
115,206 GEORGE W. HINGES.
COMBINED THRASHERS, GRAIN
SEPARATORS, AND CLEANERS.



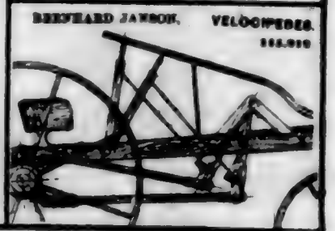
115,207
HOTCHKISS, AND
ALLERTON.
VULCANIZING APPARATUS.



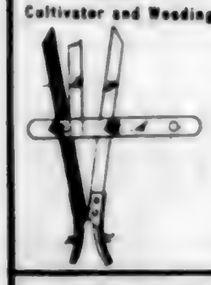
115,208 JOHN HOUPT.
STEAM-ENGINES.



115,209 JOHN HUGHES.
UTILIZING IMMATURE COTTON-BOLLS.



115,210 HUMPHREY AND RICKFORD.
SCROLL-SAWS.



115,211 WILLIAM A. IVES. BUNG-BORERS.

BERNARD JAWSON. VELOCIPEDES.

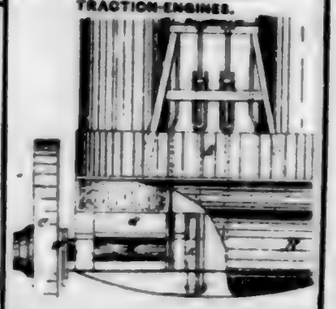
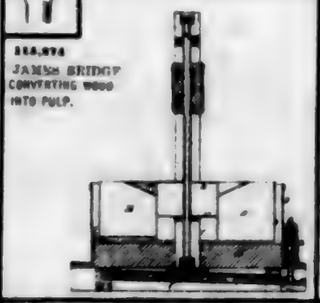
115,278 GEORGE A. BURROUGH. MANUFACTURE OF ARTICLES OF ENAMELLED METALS.

115,279 HENRY CHISHOLM MANUFACTURE OF BESSEMER STEEL.

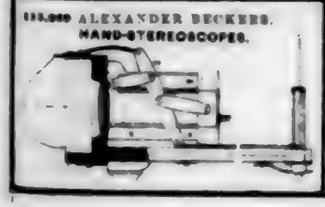


114,967 DANIEL ARMSTRONG. MAKING WROUGHT-NAILS.

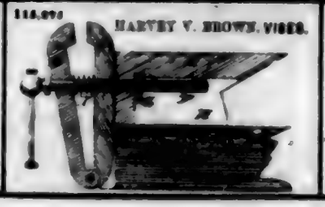
115,273 WILLIAM BOYD CLAMPS FOR THILL-COUPLINGS.



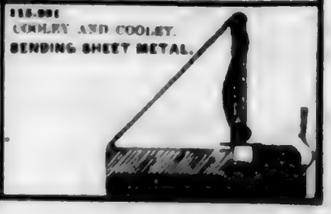
115,280 JAMES HENRY CLAPHAM. TRACTION-ENGINES.



114,968 BAKER, BOOT AND CADE. PLATFORM WEIGHING SCALES.



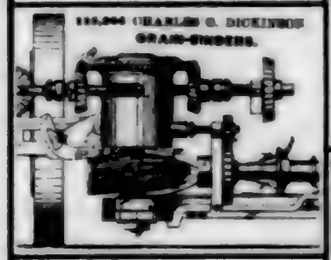
115,274 JAMES BRIDGE CONVERTING WOOD INTO PULP.



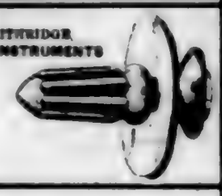
115,269 ALEXANDER BECKERS. HAND-STEREOSCOPES.

115,275 HARVEY V. BROWN. VISES.

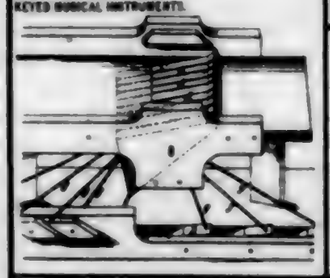
115,281 COOLEY AND COOLEY. BENDING SHEET METAL.



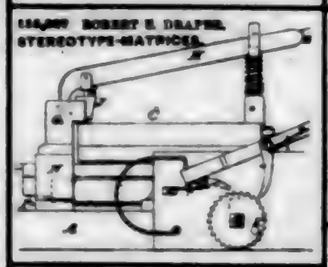
115,282
DANIEL M. DARBY,
HEMMERS FOR SEWING-MACHINES.



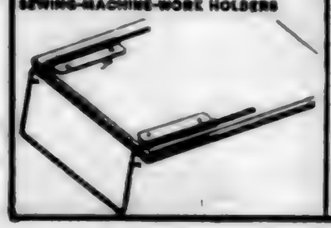
115,283
HENRY WILLIAM DEE,
LIQUID-FLASKS.



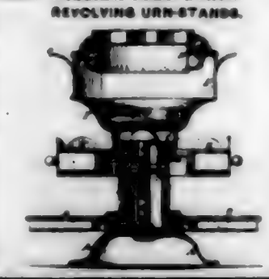
115,284 CHARLES G. DICKINSON
GRAIN-BINDERS.



115,285
EDWARD DITHRIDGE,
SURGICAL INSTRUMENTS.



115,286
HARRISON DOWNS,
KEYED SURGICAL INSTRUMENTS.

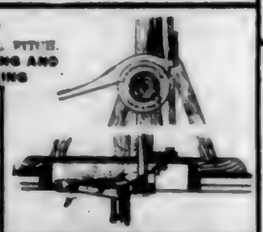


115,287 ROBERT E. DRAPER,
STEREOTYPE-MATRICES.

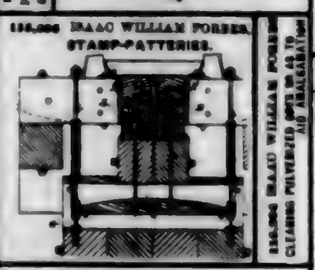
115,288 HENRY EDDY,
SEWING-MACHINE-WORK HOLDERS.

115,289 WILLIAM JOHN EVANS,
REVOLVING URN-STANDS.

115,290 LUTHER R. FAUGHT,
HOLD-FASTS FOR LATHE-SPINDLES.



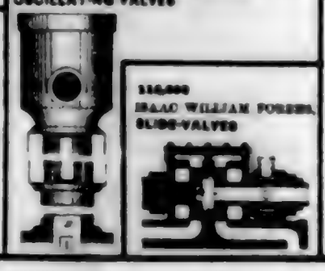
115,291 LUTHER R. FAUGHT,
DIE-STOCKS FOR CUTTING SCREWS.



115,292
RUSH L. FITCH,
HOISTING AND LOWERING

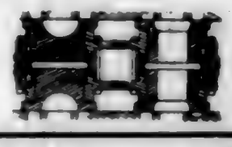
115,293 ISAAC WILLIAM FORBES,
FURNACE, PUDDLING, FOR PRECIOUS METALS.

115,294 ISAAC WILLIAM FORBES,
STAMP-BATTERIES.



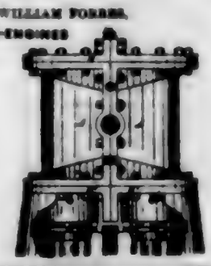
115,295 ISAAC WILLIAM FORBES,
CLEANING PULVERIZED ORES IN AIR BLAST.

115,296 ISAAC WILLIAM FORBES,
OSCILLATING VALVES.

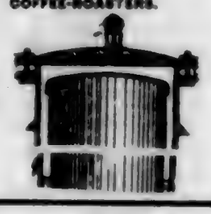


115,297 ISAAC WILLIAM FORBES,
OSCILLATING VALVES.

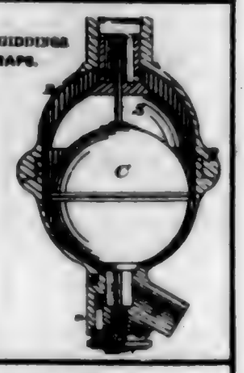
115,298
ISAAC WILLIAM FORBES,
SLIDE-VALVES.



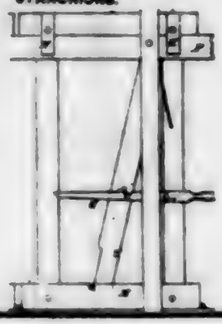
115,299 ISAAC WILLIAM FORBES,
SLIDE-VALVES.



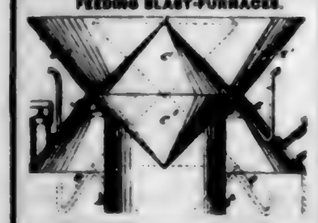
115,300 VALVE-GEARS
ISAAC WILLIAM FORBES.



115,301
ISAAC WILLIAM FORBES,
STEAM-ENGINES.

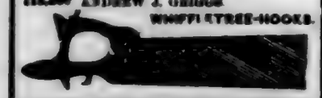


115,302 JAMES GALLOWAY
COFFEE-ROASTERS.

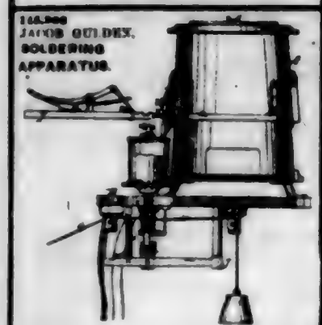


115,303
ISAAC'R. GIDDINGS
STEAM-TRAPS.

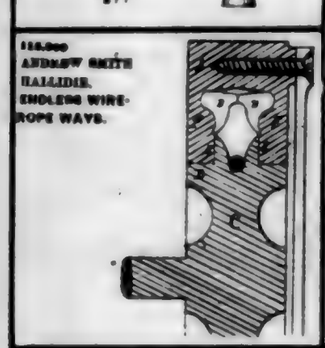
115,304 WALTER G. GIFFORD,
STANCHIONS.



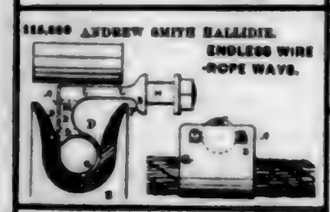
115,305 LEVET S. GOODRICH,
FEEDING BLAST-FURNACES.



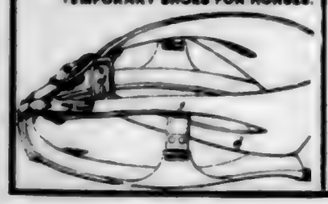
115,306
ALEXANDER GREGG,
PACKING-BOXES.



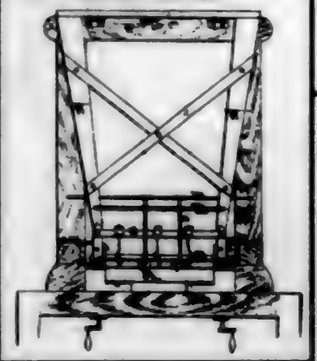
115,307 ANDREW J. GRIGGS
WHIFFLETREE-HOOKS.



115,308
JACOB GULDEN,
SOLDERING APPARATUS.

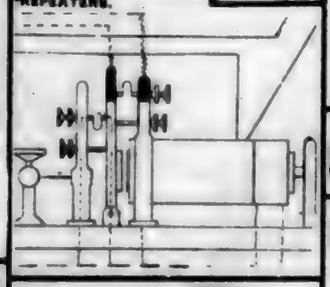


115,309
ANDREW SMITH HALLIDIE,
ENDLESS WIRE-ROPE WAYS.

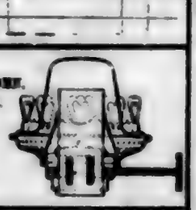


115,310 ANDREW SMITH HALLIDIE,
ENDLESS WIRE-ROPE WAYS.

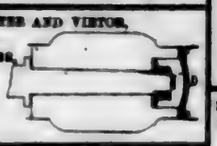
115,311 WILLIAM HUTSON HAISEY,
TEMPORARY SHOES FOR HORSES.



115,312 BENJAMIN R. HAMILTON,
CREASING LEATHER.

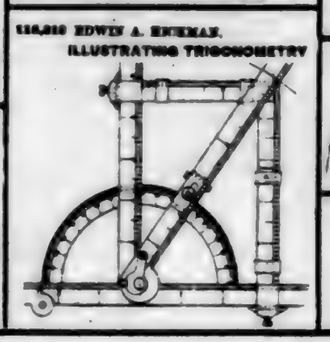


115,313
WILLIAM HARKERVILL,
TURPENTINE-BOXES.



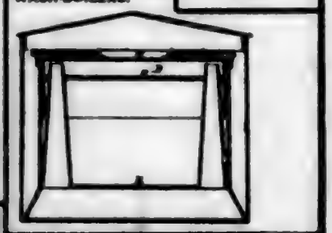
115,314
CHARLES H. HASKINS,
AUTOMATIC TELEGRAPH REPEATERS.

115,315
HIRAM W. HAYDEN,
LAMP-BURNERS.



115,316 HEATER AND VIETOR,
ATTACHING CAPS TO HUBS.

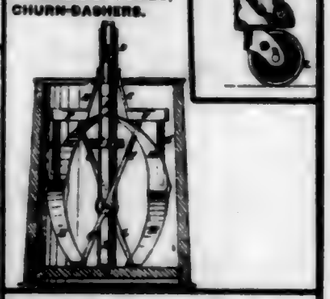
115,317 HERRMANN AND HERRMANN,
WAGON-AXLES.



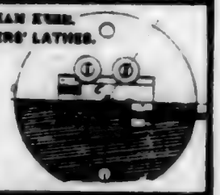
115,318 EDWIN A. HERMAN,
ILLUSTRATING TRIGONOMETRY.

115,319
JAMES HOPKINS,
ANIMAL-POKES.

115,320
HARVEY L. HORTON,
WASH-BOILERS.

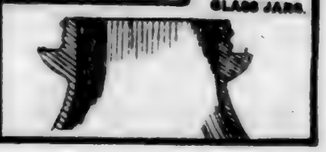


115,321 JEROME B. HULBERT,
DUMPING CARTS.

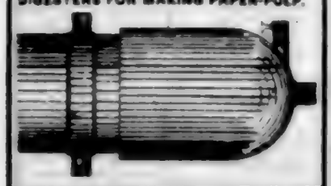


115,322.
H. A. HUMPHREY.
Casters for Stove-Legs.

115,323
WILLIAM F. JONES,
CHURN-DASHERS.



115,324 WILLIAM KYER,
WATCHMAKERS' LATHES.

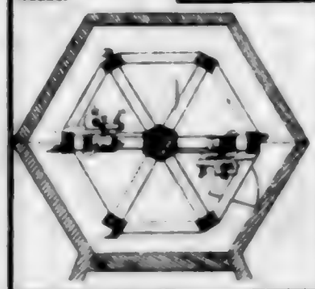


115,325
BENJAMIN KIFER,
WASHING-MACHINES.

115,326
WILLIAM H. KIRCHNER,
GLASS JARS.

115,327 WILLIAM P. LADD.
DIGESTERS FOR MAKING PAPER-PULP.

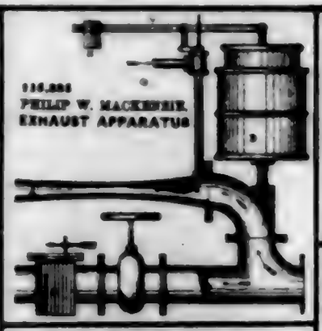
115,328
ORRIN H. LANGDON.
HANDSAWS.



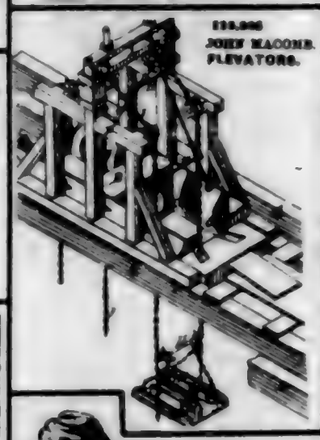
115,329 LAMPS.
HENRY E. LAUCHLIN.

115,330
GEORGE C. LAWTON.
GATE AND DOOR LATCHES.

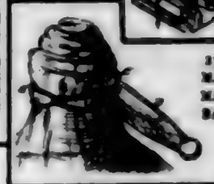
115,331
PITCH B. LEWIS.
FLOUR-BOLTING REELS.



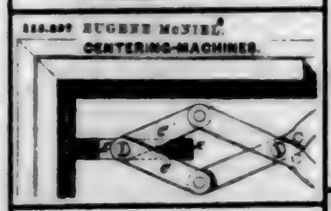
115,332 JOHN B. LOMAS.
MUSIC-STOOLS AND BOOK-RACKS



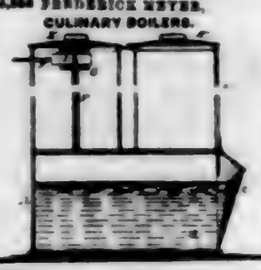
115,333 THOMAS M. LYONS.
SHEAVES AND RAILS



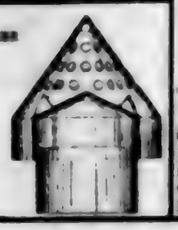
115,334
PHILIP W. MACKENZIE.
EXHAUST APPARATUS



115,335
JOHN MACOMB.
ELEVATORS.



115,336
MARKHAM AND MARKHAM.
BAG-TIES.



115,337 EUGENE McVIEL.
CENTERING-MACHINES.

115,338
FREDERICK MEYER.
CULINARY BOILERS.

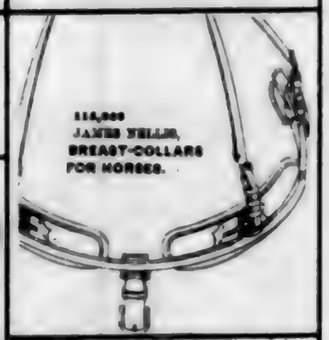
115,339
BENJAMIN F. MILLER.
VENTILATORS.

115,340
BUTLER B. MILLER.
EAVES-TROUGHS

115,340
ABSOLUTE MILLER.
LUBRICATING COMPOUNDS.

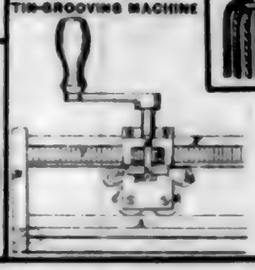
115,341
WILLIAM MILLER.
SASHES.

115,342
GEORGE T. MORSE.
CHANGEABLE-GAGE CAR-TRUCKS.

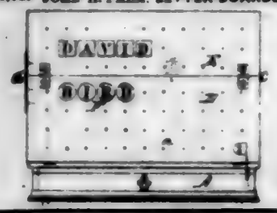


115,343 PETER W. NESFUS.
DRAINERS FOR TUMBLERS

115,344 PETER W. NESFUS. DOOR-MATS

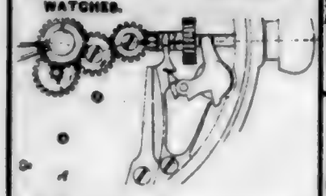


115,345
JAMES NELLIS.
BREAST-COLLARS FOR HORSES.



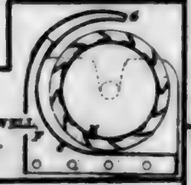
115,346
JAMES NORMAN.
TASSELS.

115,347
HORATIO J. NOYES.
TIN-GROOVING MACHINE

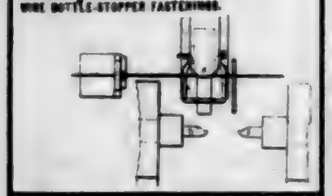


115,349 JOHN H. PALM. LETTER-BOARDS

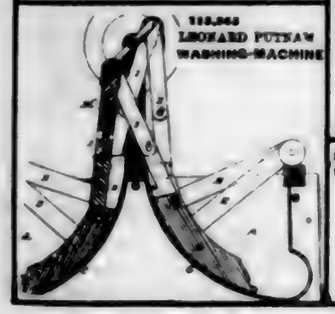
115,350
GEORGE T. PARRY.
VAPOR-BURNERS.



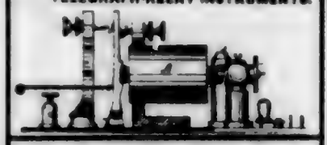
115,351
EDWIN HATHAWAY PERRY.
STEM-WINDING WATCHES.



115,352
ARCHIBALD A. PORTER.
GARDEN IMPLEMENTS.

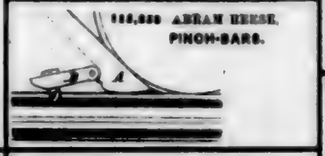


115,353
CHARLES W. POWELL.
WASH-BOILERS.



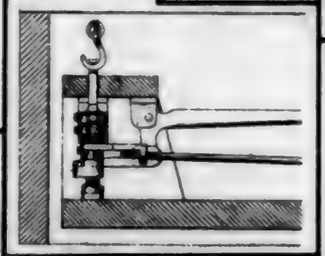
115,354 HENRY W. PUTNAM.
WIRE BOTTLE-STOPPER FASTENINGS.

115,355
LEONARD PUTNAM.
WASHING-MACHINE

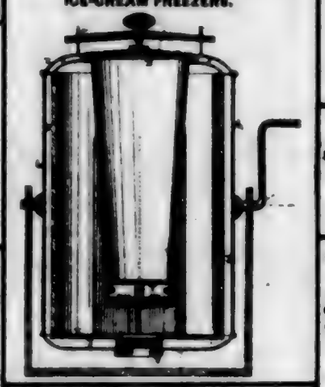


115,356 CLARENCE RATHBONE.
TELEGRAPH-RELAY INSTRUMENTS.

115,357 MONTAGUE REDGRAVE.
BAGATELLES.



115,358 ABRAM REESE.
PINCH-BARS.

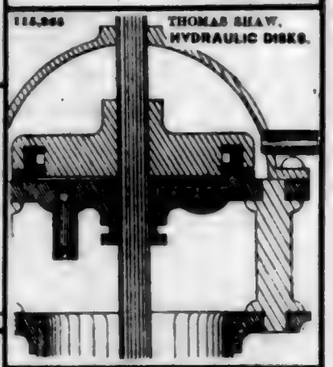


115,359
HENRY R. REMBEY
BASE-BURNING STOVES.

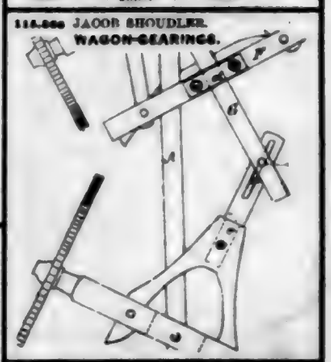
115,360
IRA ARIEL RICHARDS.
BOAT-DETACHING APPARATUS.

115,361 MORITZ ROSENTHAL.
ICE-CREAM FREEZERS.

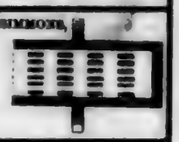
115,362 REUBEN R. ROYER.
WATER-WHEELS.



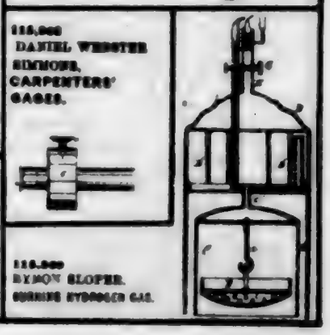
115,363
WILLIAM G. RUGH
TOBACCO-PIPES.



115,364
ALBERT P. SEYMOUR.
SHUTTER-FASTENINGS.



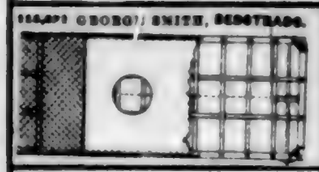
115,365 THOMAS SHAW.
HYDRAULIC DISKS.



115,366 JACOB SHOUDLER.
WAGON-GEARINGS.

115,367 ALONZO J. SIMMONS.
SEPARATING FROM BOILING LIQUIDS.

115,368
DANIEL WEBSTER SIMMONS.
CARPENTERS' GAGES.

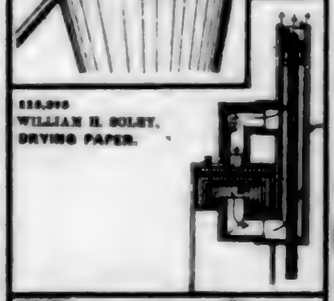


115,369
HYMON SLOPER.
BURNING HYDROCARBON GAS.

115,370 DEXTER SMITH, SHOT-GUNS.

115,371 GEORGE SMITH, SEED-TRAPS.

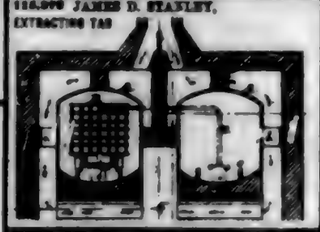
115,372 HAMILTON B. SMITH, CLOTHES-WRINGERS.



115,373 WILLARD H. SMITH, IGNITING GAS AND OTHER LIGHTS.

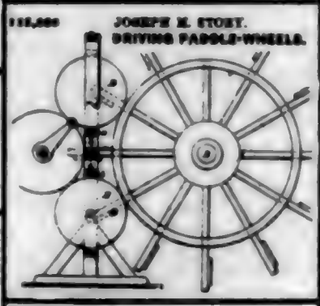
115,374 WILLIAM SOHIER, FLY-NETS.

115,375 WILLIAM H. SOLEY, DRYING PAPER.

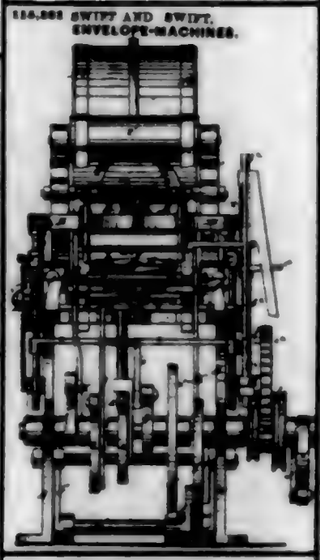


115,376 SOUDER AND MILLER, HARVESTERS.

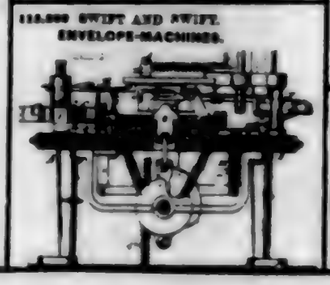
115,377 CARL STADELMANN, GLASS-MOLDS.



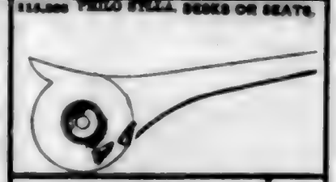
115,378 JAMES D. STANLEY, EXTRACTING TAR



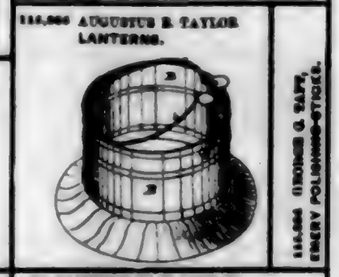
115,379 DAVID B. STEARNS, POWERS FOR SEWING-MACHINES.



115,380 JOSEPH M. STORY, DRIVING PADDLE-WHEELS.



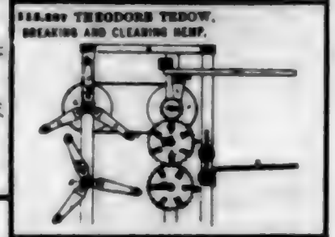
115,381 SWIFT AND SWIFT, ENVELOPE-MACHINES.



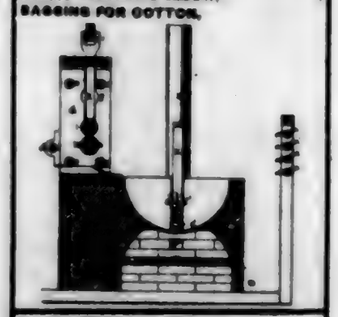
115,382 SWIFT AND SWIFT, ENVELOPE-MACHINES.

115,383 PEDRO STALA, DESKS OR SEATS.

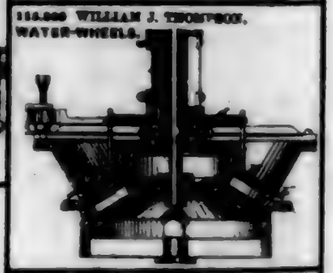
115,384 AUGUSTUS B. TAYLOR, LANTERNS.



115,385 GEORGE G. TAPP, EMERY POLISHING-STICKS.



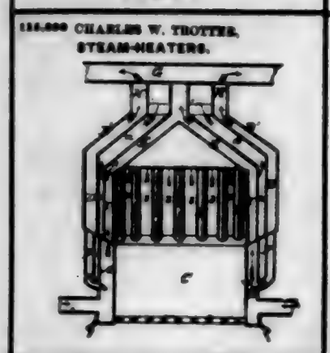
115,386 BENJAMIN W. TAYLOR, LIFE-PRESERVERS.



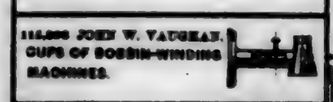
115,387 THEODORE TEBOW, BREAKING AND CLEANING HEMP.

115,388 THEODORE TEBOW, BAGGING FOR COTTON.

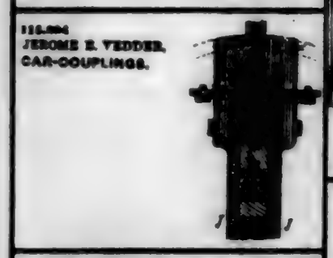
115,389 WILLIAM J. THOMPSON, WATER-WHEELS.



115,390 WENZEL TOEPFER, STIRRING SALT IN THE KILN.

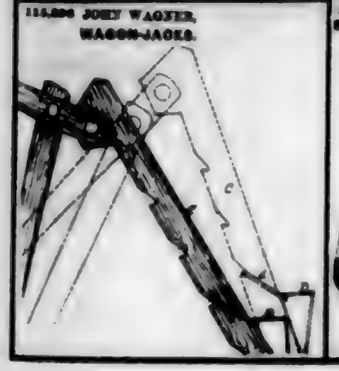


115,391 WILLIAM H. R. TOTH, PRINTING-PRESSES.

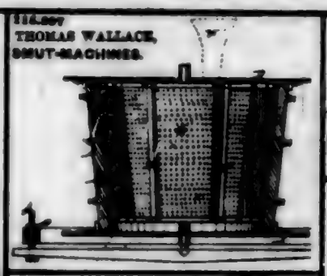


115,392 CHARLES W. TROTTER, STEAM-HEATERS.

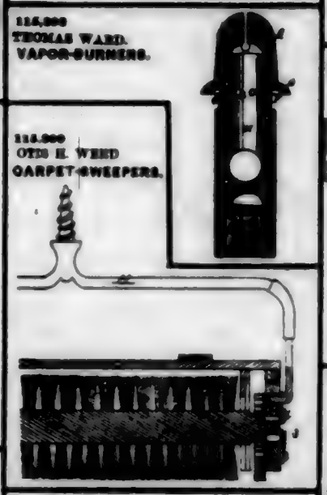
115,393 JOHN W. VAUGHAN, CUPS OF BOBBIN-WINDING MACHINES.



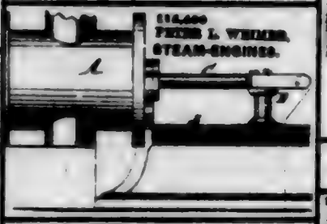
115,394 JEROME B. VEDDER, CAR-COUPLINGS.



115,395 ISAM VEST, BOILING SUGAR.

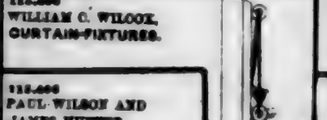


115,396 JOHN WAGNER, WAGON-JACKS.

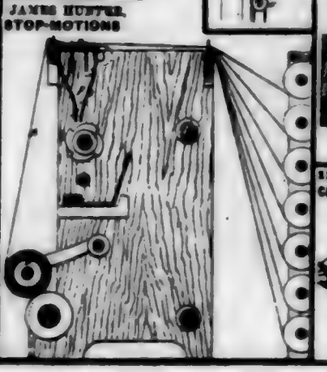


115,397 THOMAS WALLACE, SNUT-MACHINES.

115,398 THOMAS WARD, VAPOR-BURNERS.



115,399 OTIS H. WEED CARPET-SWEEPERS.

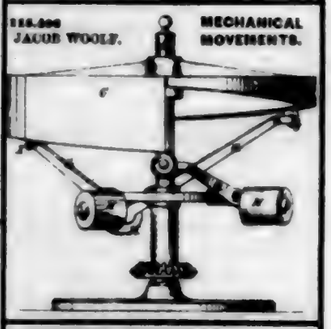


115,400 PETER L. WEIMER, STEAM-ENGINES.

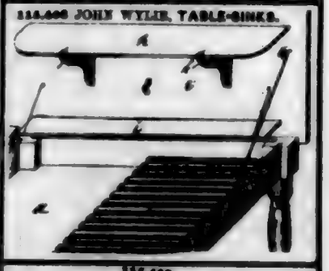
115,401 SAMUEL WHITESIDES, PLANING-MACHINES.

115,402 WILLIAM C. WILCOX, CURTAIN-FIXTURES.

115,403 PAUL WILSON AND JAMES HUNTER, STOP-MOTIONS

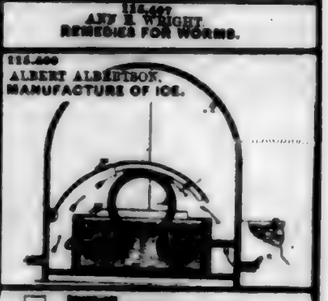


115,404 WILLIAM H. WINDSOR, PRINTERS' FURNITURE.



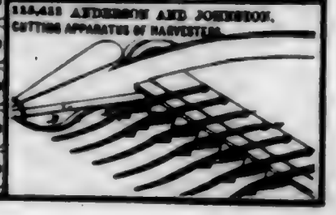
115,405 EDWIN D. WIPPERN, SWEDGES FOR HORSESHOE-CALKS.

115,406 JACOB WOOLF, MECHANICAL MOVEMENTS.

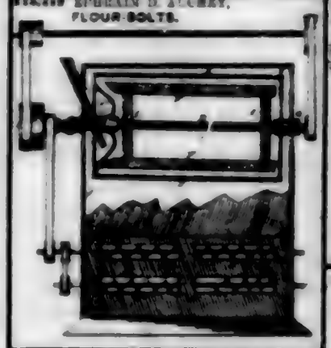


115,407 JOHN WYLIE, TABLE-SINKS.

115,408 ANN E. WRIGHT, REMEDIES FOR WORMS.

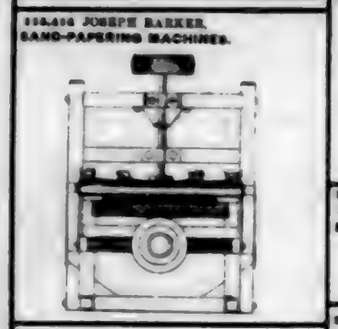


115,409 ALBERT ALBERTSON, MANUFACTURE OF ICE.



115,410 SOLOMON A. ALEXANDER, SPRING-ADJUSTERS.

115,411 ANDERSON AND JOHNSON, CUTTING APPARATUS OF HARVESTERS.



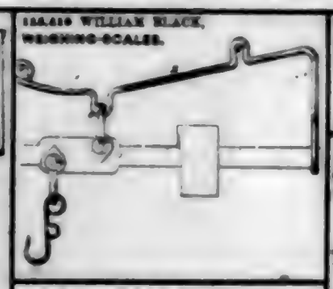
115,412 EPHRAIM D. ACHEY, FLOUR-BOLTS.

115,413 THOMAS BAGGOTT, MAKING SPIRAL-WIRE SPRINGS.

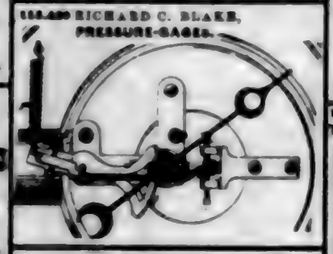
115,414 JOSEPH BARKER, SAND-PAPERING MACHINES.

115,415 ALBERT BARLING, PRUNING-SHEARS.

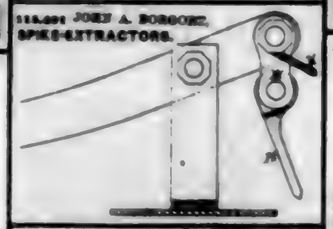
115,416 HARWELL E. BELLOWS, WASH-BOARDS.



115,417 WILLIAM BENDER, REFINING RAW SUGAR.



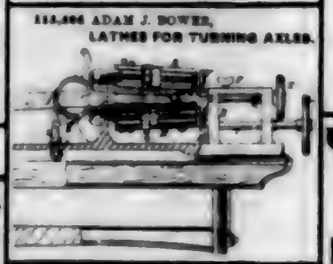
115,418 GEORGE W. BISHOP, SASH-BALANCES.



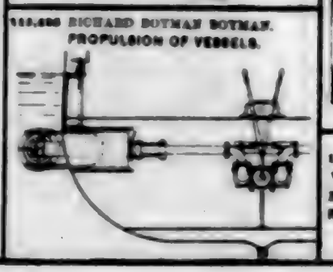
115,419 WILLIAM BLACK, WEIGHING-SCALES.

115,420 RICHARD C. BLAKE, PRESSURE-GAGES.

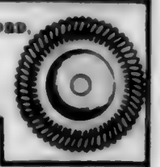
115,421 JOHN A. BORGOS, SPIKE-EXTRACTORS.



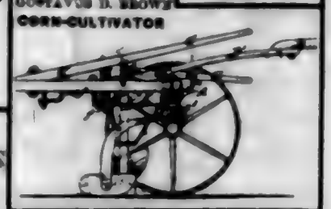
115,422 AUGUSTUS O. BOURE, BOOTS AND SHOES.



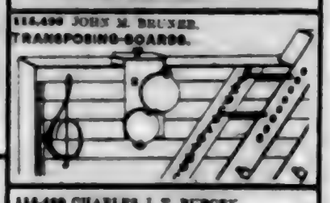
115,423 NOAH BOWEN, STEAM-HEATER



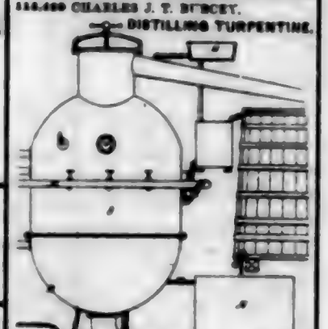
115,424 ADAM J. BOWER, LATHES FOR TURNING AXLES.



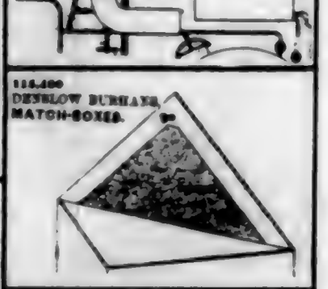
115,425 RICHARD BOTMAN BOTMAN, PROPULSION OF VESSELS.



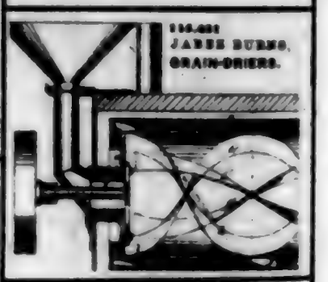
115,426 HORACE G. BRADFORD, SINKER-WHEELS



115,427 GUSTAVUS D. BROWN, CORN-CULTIVATOR

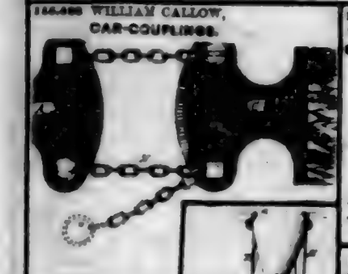


115,428 JOHN M. BRUNER, TRANSPOSING-BOARDS.



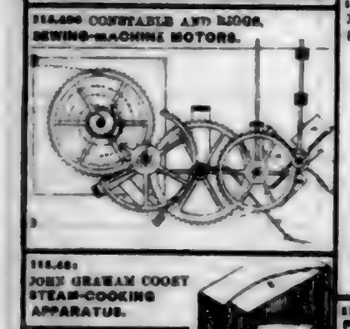
115,429 CHARLES J. T. BURCEY, DISTILLING TURPENTINE.

115,430 DENSLOW BURHANS, MATCH-BOXES.



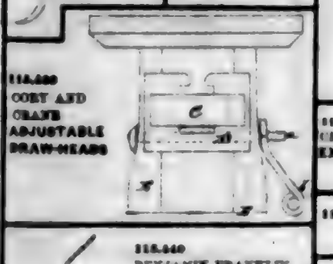
115,431 JAMES BURNS, GRAIN-DRIERS.

115,432 WILLIAM BUTTERFIELD, RIVETS.

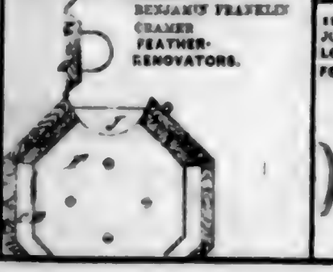


115,433 WILLIAM CALLOW, CAR-COUPLINGS.

115,434 WILLIAM D. CHAPMAN, MINNOW-PROPELLERS.



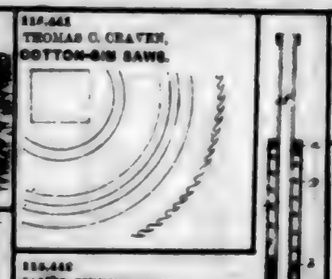
115,435 JOHN W. CHAPPELL, TWISTING AND SPINNING HEADS.



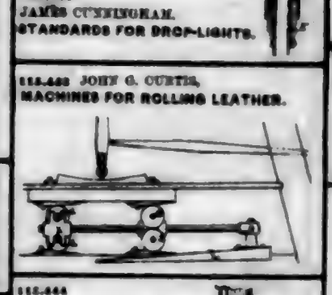
115,436 CONSTABLE AND RIDGE, SEWING-MACHINE MOTORS.

115,437 JOHN GRAHAM COOEY STEAM-COOKING APPARATUS.

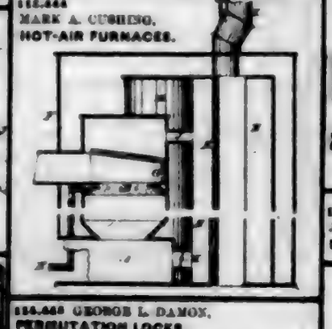
115,438 WILLIAM F. CORNELL, SURFACE-GAGES.



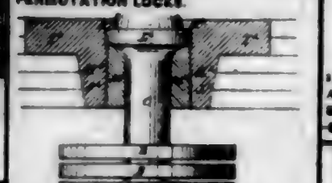
115,439 COBY AND CRANE ADJUSTABLE DRAW-HEADS



115,440 BENJAMIN FRANKLIN CRAMER FEATHER-RENOVATORS.

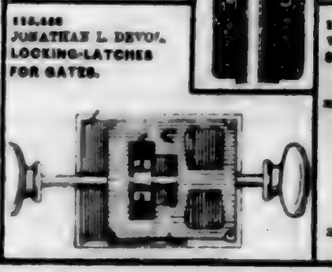


115,441 THOMAS C. CRAVEN, COTTON-GIN SAWS.



115,442 JAMES CUNNINGHAM, STANDARDS FOR DROP-LIGHTS.

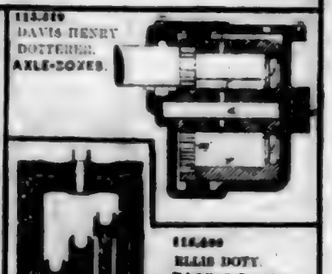
115,443 JOHN G. CURTIS, MACHINES FOR ROLLING LEATHER.



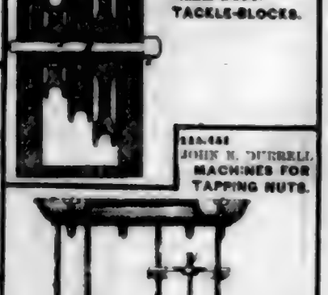
115,444 MARK A. CUSHING, HOT-AIR FURNACES.

115,445 GEORGE L. DAMON, PERMUTATION LOCKS.

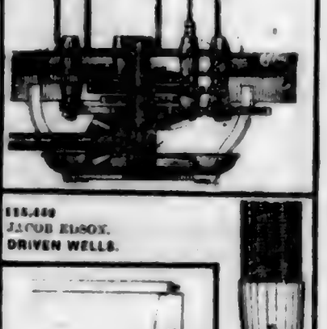
115,446 CHARLES DRAVE, EXTENSION DROP-LIGHTS



115,447 REBA DAVIS, SEASONING WOOD.

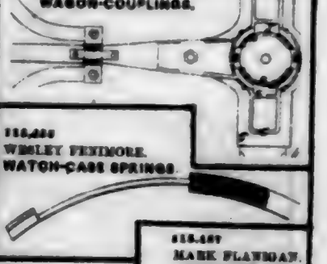


115,448 JONATHAN L. DEVO, LOCKING-LATCHES FOR GATES.

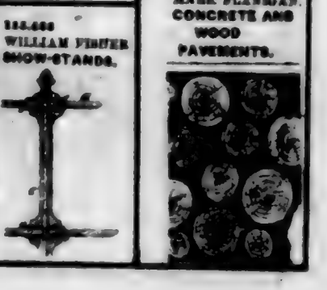


115,449 DAVIS HENRY DOTTERER, AXLE-BOXES.

115,450 ELLIS DOTY, TACKLE-BLOCKS.



115,451 JOHN H. DURRELL, MACHINES FOR TAPPING NUTS.



115,452 JACOB EISON, DRIVEN WELLS.

115,453 AMOS FASSETT, SPRING WAGON-SEATS

115,454 AMOS FASSETT, WAGON-COUPLINGS.

115,455 WESLEY FENIMORE, WATCH-CASE SPRINGS.

115,456 WILLIAM FISHER SHOW-STANDS.

115,457 MARK FLANIGAN, CONCRETE AND WOOD PAVEMENTS.

115,480 SAMUEL W. POWLER. LAMP-CHIMNEYS.

115,481 GEORGE E. COLTEY, FREDERICK V. HOGARTH. MEDICAL COMPOUNDS.

115,482 CONRAD FURST. CULTIVATORS.

115,483 GODDARD AND BRENNAN. CLOTHES-DRIERS.

115,484 HALL AND LOCKER. STUFFING-BOXES.

CANCELLED.

115,485 JOHN F. HASKINS. ALARM-GATONS.

115,486 WILLIAM P. HATCH. HAND-SPINNING

115,487 JOHN HEBBERLING. COFFEE-POTS.

115,488 HIRAM W. HAYDEN. LAMP-BURNERS.

115,489 JOHN M. HEDD. PRESERVING SILK

115,490 JOHN JOSEPH HENRY. THREAD-CUTTERS.

115,491 BENJAMIN HISKLEY. RAILWAY SWITCHES.

115,492 HODGSON AND BROWN. FIRE-PROOF ROOFS.

115,493 HODGSON AND BROWN. FIRE-PROOF BEAMS.

115,494 JAMES HOSKINSON. [illegible] AND SHAVING SKINS

115,495 GEORGE HOLZMANN. OYSTER-SHUCKERS.

115,496 WILLIAM WHEELER HUBBELL. PAVEMENTS.

115,497 JAMES G. HUNT. STOVES AND FIRE-PLACES.

115,498 ALBERT L. IDE. STEAM-HEATERS

115,499 SIMON INGERSOLL. VALVE-MOTIONS.

115,500 GEORGE H. IRELAND. SAFES.

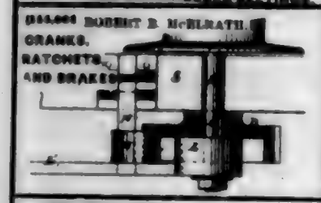
115,878 SLIDE-VALVES. MARTIN AND PERROW,



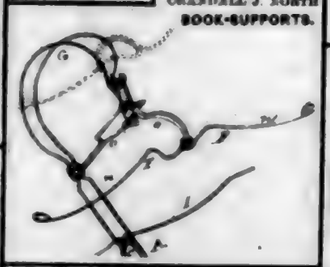
115,879 PETER McBRIDE. REFRIGERATORS.

115,880 CHARLES McBURNEY. FINISHING VULCANIZED INDIA-RUBBER BELTINGS.

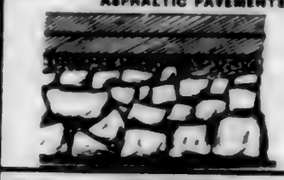
115,881 ROBERT B. McELRATH. CRANKS, RATCHETS, AND BRAKES.

115,882 HUGH MEEHAN. NON-FREEZING HYDRANTS.

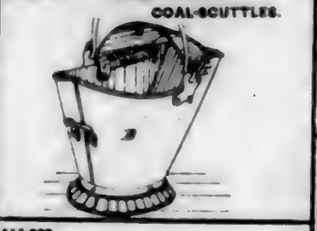
115,883 GERSHOM MOTT, GATES.



115,884 FORDYCE M. MOULTON. ANIMAL-POKER.

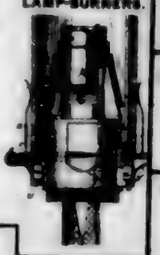


115,885 DAVID S. NEAL, KNIFE-SCOURERS.

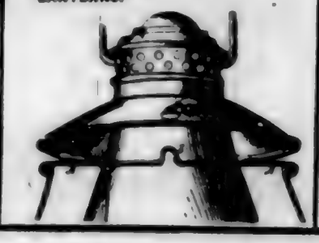


115,886 CRANDALL J. NORTH BOOK-SUPPORTS.

115,887 WILLIAM B. PARIBEN. ASPHALTIC PAVEMENTS.

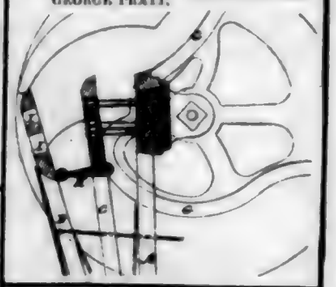


115,888 JOHN PFEIFER. COAL-SCUTTLES.

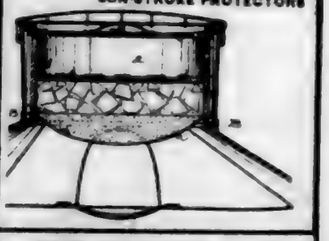


115,889 NUT-LOCKS. WILLIAM H. PHIPPS.

115,890 SEABURY B. PLATT. LAMP-BURNERS.

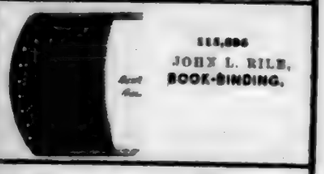


115,891 WILLIAM PORTER, JR. LANTERNS.



115,892 TIMOTHY J. POWERS. METALLIC CARTRIDGES.

115,893 GEORGE PRATT. RAISIN-SEEDERS.



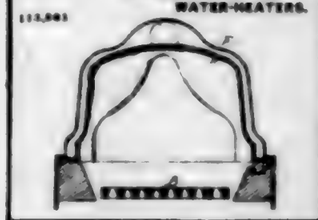
115,894 HELLWIG PREVÔT. SUN-STROKE PROTECTORS

115,895 ADAM B. REESE. HOSE-PIPES.

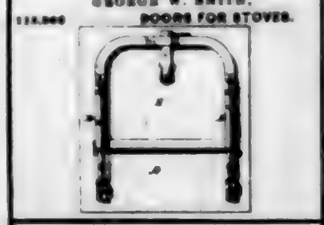
115,896 JOHN L. RILE. BOOK-BINDING.

115,897 JULIUS ROBBINS. SNAP-HOOKS.

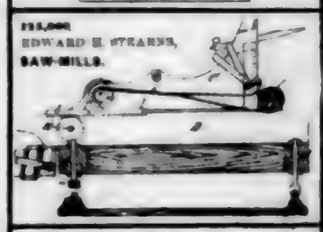
115,898 GEORGE S. ROBERTS. ADJUSTABLE MIRRORS.



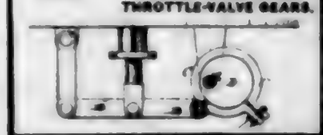
115,899
HOPS.
THOMAS P. BOUNEY.



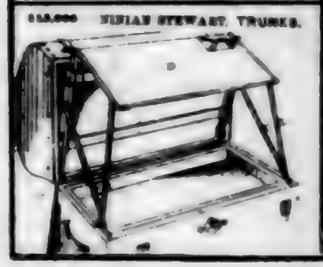
115,900
ROTH AND FURST.
ROLLERS AND MARKERS.



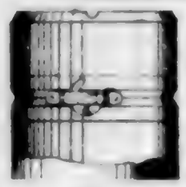
115,901
SMITH AND LYBOU,
WATER-HEATERS.



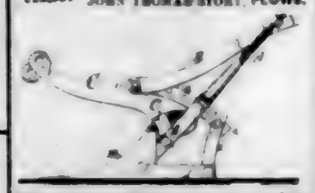
115,902
GEORGE W. SMITH,
DOORS FOR STOVES.



115,903
EDWARD H. STEARNS,
SAW-MILLS.

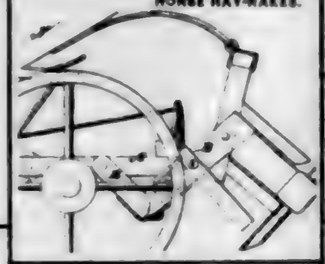


115,904
CHARLES E. STEWART,
THROTTLE-VALVE GEARS.

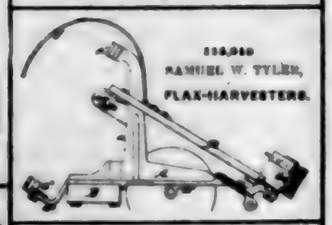


115,905
NIXIAN STEWART, TRUNKS.

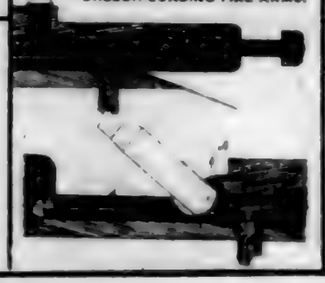
115,906
WILLIAM STINE.
STOVE-PIPE JOINTS.



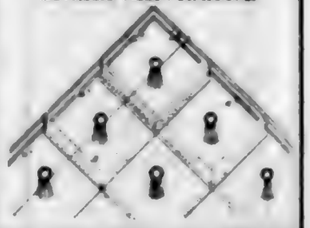
115,907
JOHN THOMAS STORY, PLOWS.



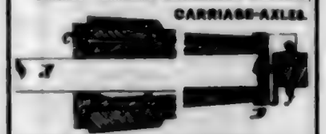
115,908
ALVAH SWEETLAND,
HAMES-FASTENERS.



115,909
MARTIN W. TREMOTT,
HORSE HAY-RAKES.



115,910
SAMUEL W. TYLER,
FLAX-HARVESTERS.

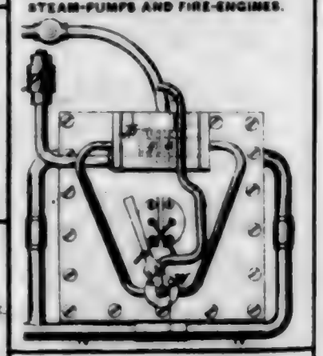


115,911
SILVANUS FREDERICK VAN CHOATE,
BREECH-LOADING FIRE-ARMS.

115,912
CORNELIS G. VAN PAPPELENDAM,
METALLIC TILES FOR ROOFS.

115,913 ERNST FRIEDRICH WAGNER,
CARRIAGE-AXLES.

115,914 CHARLES A. WAKEFIELD,
LUBRICATING ARRANGEMENTS FOR AXLES



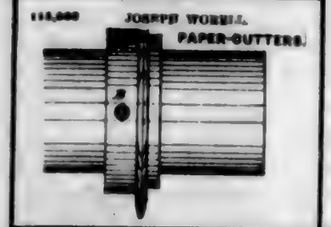
115,915 EDWARD F WALSH AND
SAFFORD DURYEA,
WRITING-INKS.

115,916
FRANKLIN WEBBER,
REVOLVING FIRE-ARMS.

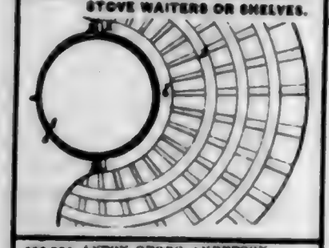
115,917
LEVI WHARTON,
HOSE-COUPLINGS.

115,918 JAMES W. WHITAKER,
STEAM-PUMPS AND FIRE-ENGINES.

115,919. PUMP-RAKE.

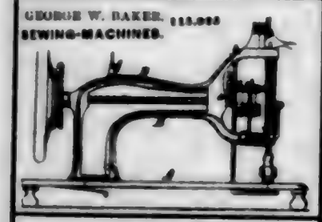


115,920
JOHN B. WHITMAN,
CHILDREN'S CARRIAGES.



115,921
JOHN V. WOODHOUSE,
FURNACES FOR SMELTING LEAD ORES.

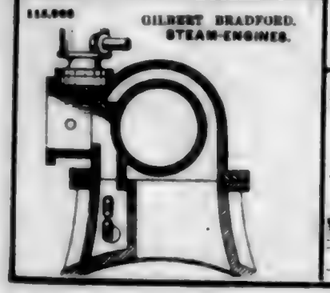
115,922
JOSEPH WORRELL,
PAPER-CUTTERS.



115,923
CHARLES D. WRIGHT,
STOVE WAITERS OR SHELVES.

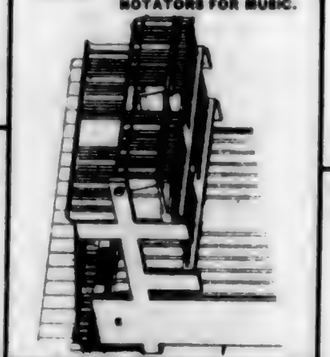
115,924 ANTON GEORG ANDERSON
COMPOSITION PAVEMENTS.

115,925
GEORGE W. BAKER,
SEWING-MACHINES.



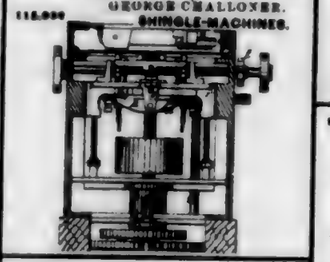
115,926
LOUIS R. BOYD,
SCREW-CAPS FOR CANS.

115,927
JOHN EDWARD BINGHAM,
ELECTRO PLATING WITH TIN.

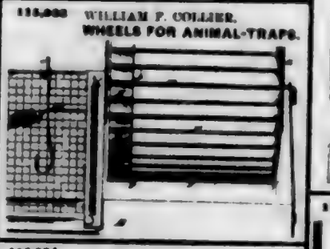


115,928
GILBERT BRADFORD,
STEAM-ENGINES.

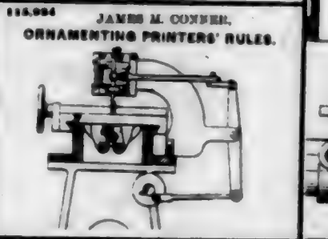
115,929
THOMAS R. C. BRINLY,
COTTON-SEED PLANTERS.



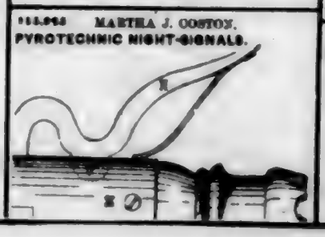
115,930
SAMUEL R. BROOKS,
NOTATORS FOR MUSIC.



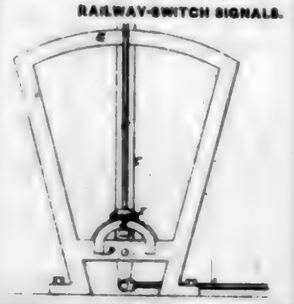
115,931
SAMUEL P. BROWN,
PRESERVING WOOD.



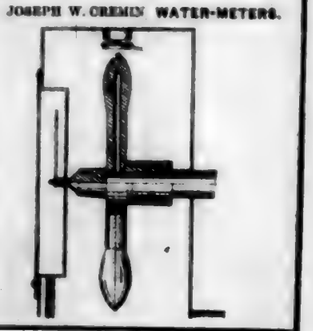
115,932
GEORGE CHALLONER,
SHINGLE-MACHINES.



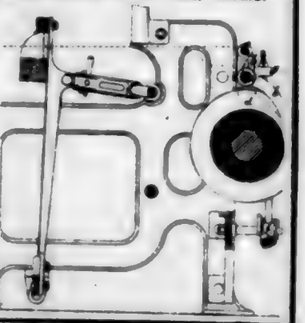
115,933
WILLIAM F. COLLIER,
WHEELS FOR ANIMAL-TRAPS.



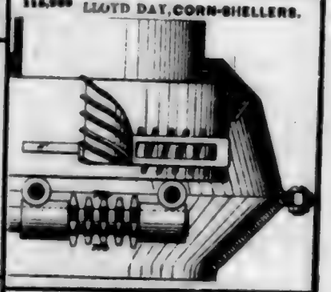
115,934
JAMES M. CONNER,
ORNAMENTING PRINTERS' RULES.



115,935
MARTHA J. COSTON,
PYROTECHNIC NIGHT-SIGNALS.



115,936
ALONZO W. CRAM,
RAILWAY-SWITCH SIGNALS.

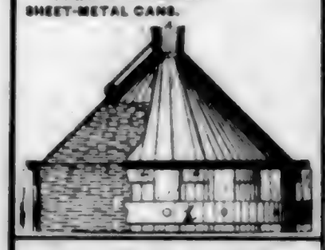


115,937
JOSEPH W. CREMIN WATER-METERS.

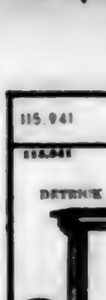
115,938 DAVIES AND YATES, LOOMS.

115,939 LLOYD DAY, CORN-SHELLERS.

115,940
AUGUSTUS M. DE SOUCHET,
WATER-METERS.



115,041 DERRICK AND HIVES. BEE-HIVES.

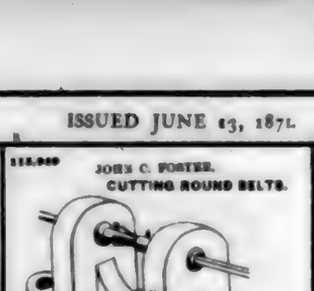


115,042 CHARLES H. DOUGLAS, LIFTING APPARATUS.

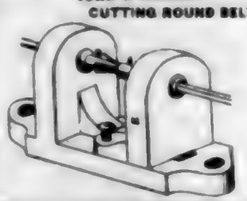
115,043 JOHN G. EVENDEN SHEET-METAL CANS.

115,044 JOSEPH FANTON, APPLYING REMEDIES TO THE EAR.

115,045 HENRY FELLOWS. WEATHER-BOARD GAUGES.

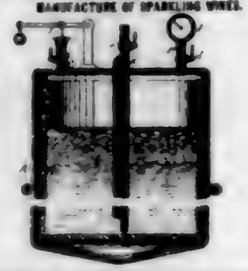


115,046 R. BERKELEY FITS, PREPARING GRAIN FOR FOOD.

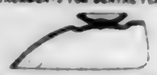


115,047 JOHN W. FIELDER, PRESERVING WOOD BY THE ROBBINS PROCESS.

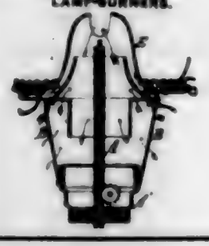
115,048 FREDERIC G. FORD, INVALID BEDSTEADS.



115,049 JOHN GOULDING, OSCILLATING ENGINES.

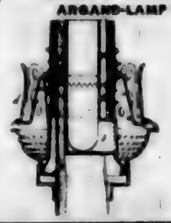


115,050 JOHN C. FOSTER, CUTTING ROUND BELTS.

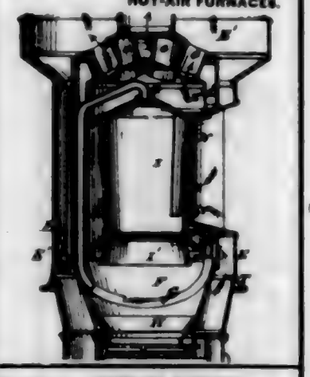


115,051 WILLIAM GILHAM, MANUFACTURE OF SPARKLING WINES.

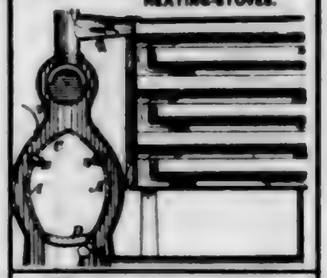
115,052 JAMES P. GILLESPIE, ATTACHMENTS FOR DENTAL-PLATES.



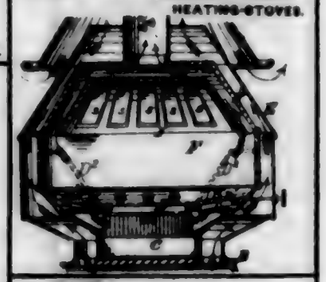
115,053 WILLIAM H. GRAY, LAMP-BURNERS.



115,054 THOMAS F. HAMILTON, CORSETS.



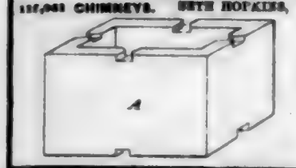
115,055 HIRAM W. HAYDEN, ARGAND-LAMP BURNERS.



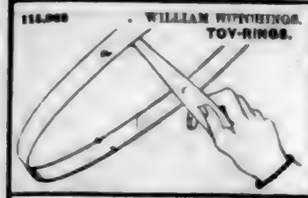
115,056 SHUBAEL B. HEWES, HOT-AIR FURNACES.

115,057 SHUBAEL B. HEWES, HEATING-STOVES.

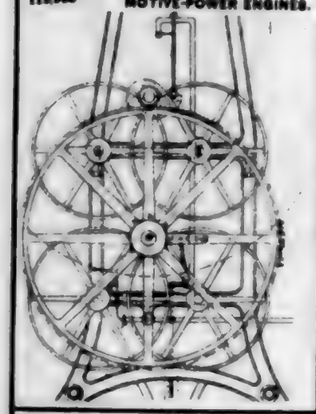
115,058 SHUBAEL B. HEWES, HEATING-STOVES.



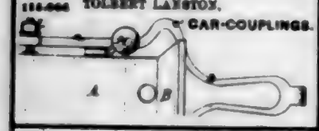
115,059 SHUBAEL B. HEWES, BASE-BURNING STOVES.



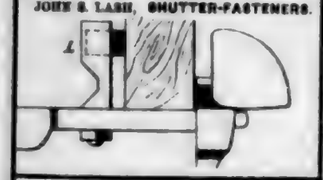
115,960 LYSANDER HILL. WOOD PAVEMENTS.



117,061 CHIMNEYS. SETH HOPKINS,

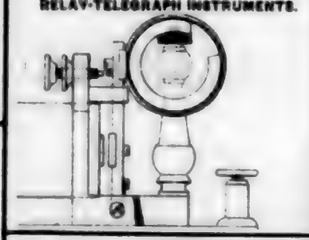


115,962 WILLIAM HUTCHINGS. TOY-RINGS.

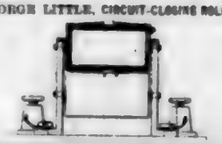


115,963 JOHN STUART JOHNSTONE, MOTIVE-POWER ENGINES.

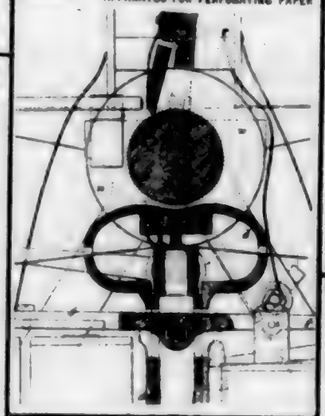
115,964 TOLBERT LANSTON. CAR-COUPLINGS.



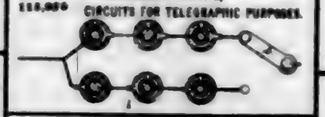
115,965 JOHN S. LASH, SHUTTER-FASTENERS.



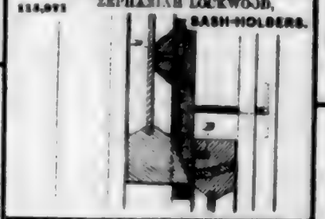
115,966 GEORGE LITTLE. SWITCHES FOR GALVANIC BATTERIES.



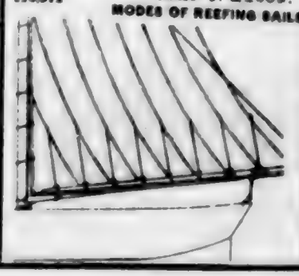
115,967 GEORGE LITTLE, RELAY-TELEGRAPH INSTRUMENTS.



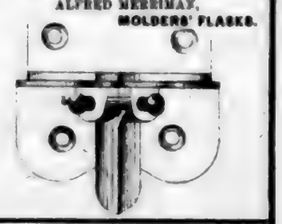
115,968 GEORGE LITTLE, CIRCUIT-CLOSING ROLLERS



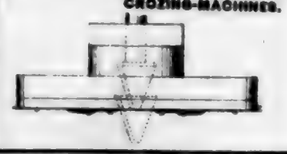
115,969 GEORGE LITTLE, APPARATUS FOR PERFORATING PAPER



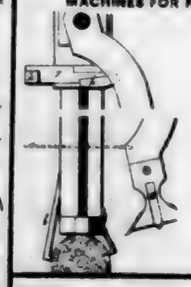
115,970 GEORGE LITTLE, CIRCUITS FOR TELEGRAPHIC PURPOSES.



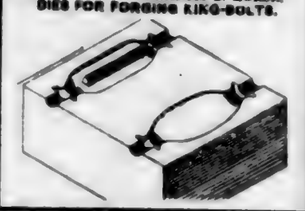
115,971 ZEPHANIAH LOCKWOOD, SASH-HOLDERS.



115,972 JOHN J. MASON. MODES OF REEFING SAILS.

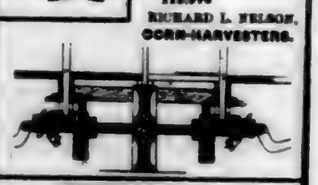


115,973 ALFRED MERRIMAN, MOLDERS' FLASKS.



115,974 WILLIAM B. MIDDLETON, CROZING-MACHINES.

115,975 ENOCH B. MORRISON. MACHINES FOR FELLING TREES.

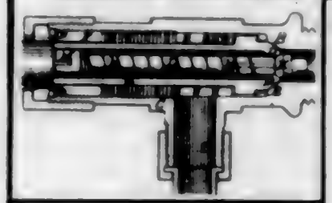


115,976 FRANCIS B. MORSE. DIES FOR FORGING RIKO-BOLTS.

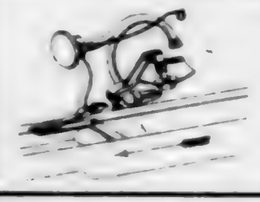
115,977 HENRY MYERS. CUT-OFFS

115,978 RICHARD L. NELSON, CORN-HARVESTERS.

115,979 HENRY OCOBB CHAIR AND STOOL IRONS.



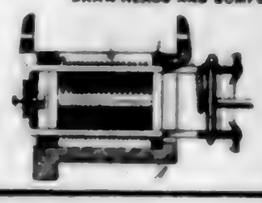
115,980 WILLIAM PARRISH GANG-PLOWS.



115,981 JOSEPH C. PIERCE. WHEELS FOR VEHICLES.

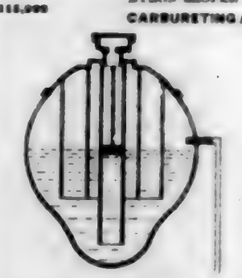
115,982 JOHN PORTEOUS. PRESSURE AND VACUUM VALVES.

115,983 HENRY PUDDER. KNITTING-MACHINES.

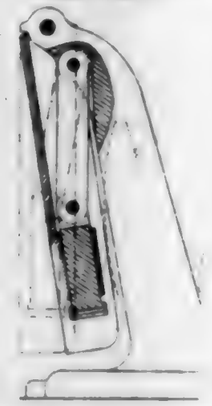


115,984 DAVID R. BOE. BROILERS.

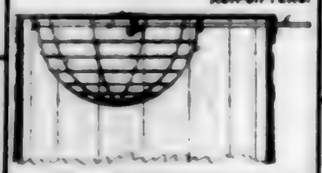
115,985 BUSH AND DE LA MATER. BUCKLES.



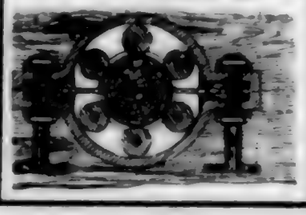
115,986 DANIEL SHAABER. DRAW-HEADS AND BUMPERS



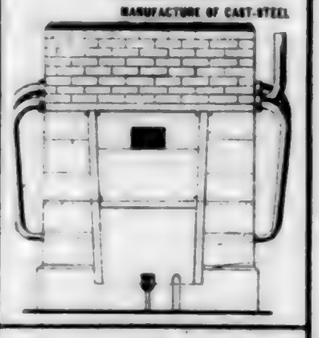
115,987 FREDERICK G. SIEMERS. MEAT-CUTTERS.



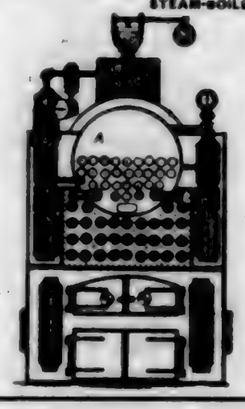
115,988 BYRON SLOPER CARBURETING AIR.



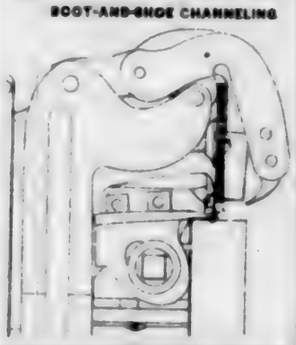
115,989 JOSEPH SLOPER HAND-STAMPS.



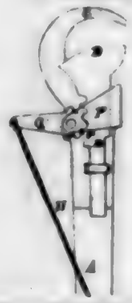
115,990 WILLIAM T. STOUTENBOROUGH. ASH-SIFTERS.



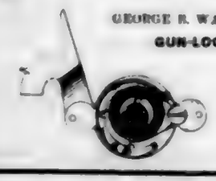
115,991 LEVI P. THURSTON. SHIPS' RUDDERS.



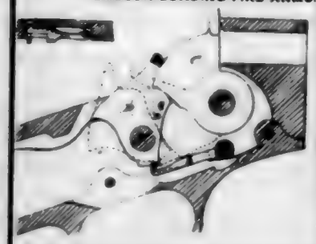
115,992 THOMAS TRAFFORD. MANUFACTURE OF CAST-STEEL



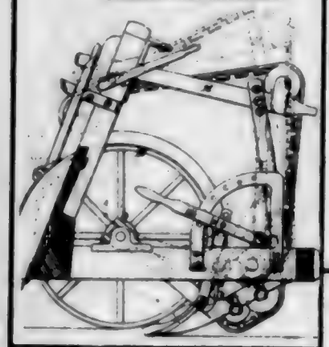
115,993 TUCKER AND BROWNELL. STEAM-BOILERS.



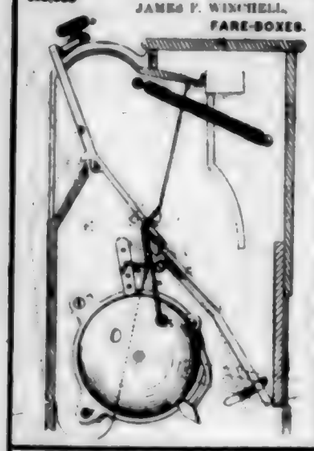
115,994 HENRY A. WOODMAN. BOOT-AND-SHOE CHANNELING



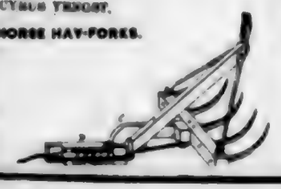
115,995 WALLET AND HANBAUGH. PRUNING-SHEARS.



115,996 GEORGE R. WARREN. GUN-LOCKS.

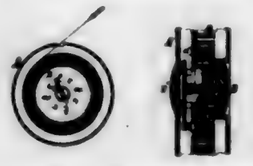


115,997 ELI WHITNEY, BREECH-LOADING FIRE-ARMS.

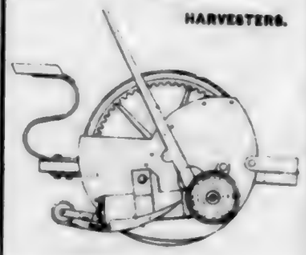


115,998 ELIAS H. WILLIAMS. EXCAVATING-MACHINES.

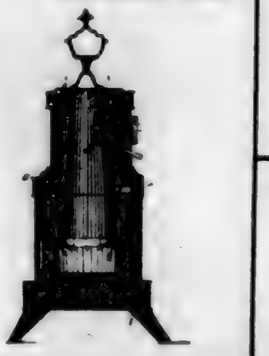
115,999 JAMES P. WINCHELL. FARE-BOXES.



116,000 CYRUS TRIOST. HORSE HAY-FORKS.

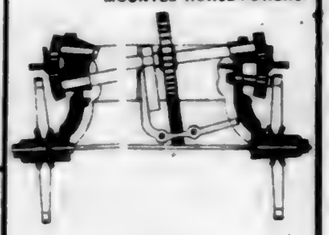


4,419 SHELDON P. GILBERT. LIGATURES, PROTECTORS, AND FERTILIZING GAGS

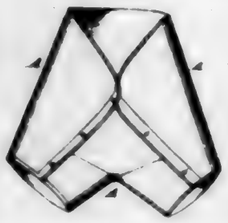


4,419 LEWIS P. BRADLEY. TAPE-MEASURES.

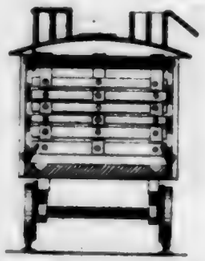
4,420 JOHN BUTTER, HARVESTERS.



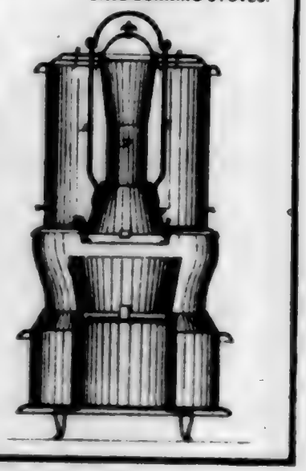
4,421 ALBERT G. CORSE. BASE-BURNING STOVES.



4,422 CHARLES STORY DUXBRACK. BOOTS AND SHOES.

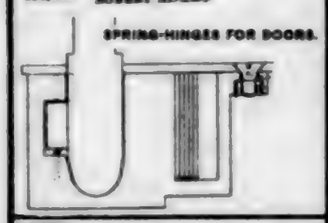


4,423 MAGENA B. ERSKINE. MOUNTED HORSE-POWERS.

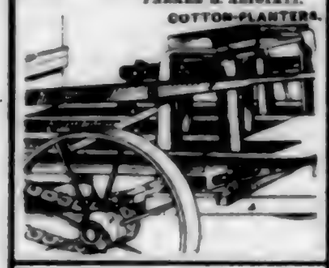


4,424 JOHN C. HEMPEL. DIAPERS.

4,425 STOCK-CARS. AMOS RANK

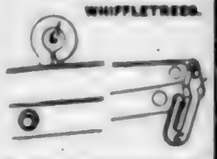


4,426 ALEXANDER WHITE. BASE-BURNING STOVES.



ILLUSTRATIONS OF PATENTS
ISSUED FROM
THE UNITED STATES PATENT OFFICE
JUNE 20, 1871.

116,002 ROBERT ADAMS. SPRING-HINGES FOR DOORS.



116,003 PARKER H. ALDSTATT. COTTON-PLANTERS.

116,004 WILLIAM AMES. ATTACHMENTS FOR VACUUM-CUPS.

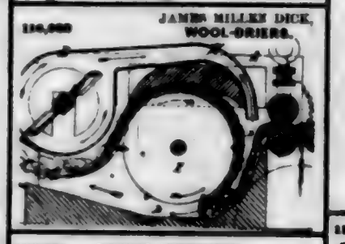
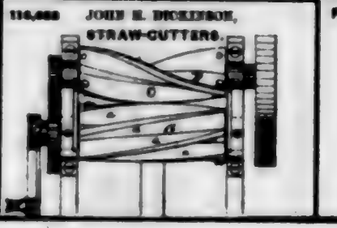
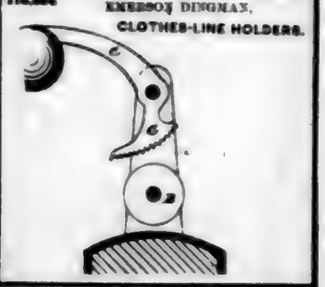
116,029 DAVID CROWELL, JR. KNIFE-SCOURERS



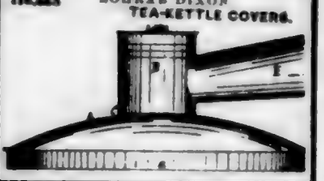
116,030 WILLIAM DEVLIEG. SCRUBBING-BRUSHES.



116,031 ALBERT L. DEWEY. STEAM-ENGINES.

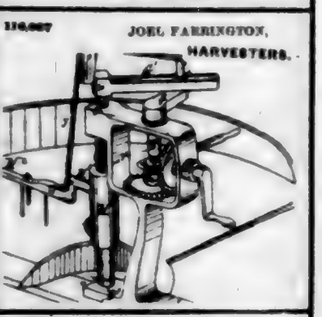


116,032 JAMES MILLER DICK. WOOL-DRIERS.



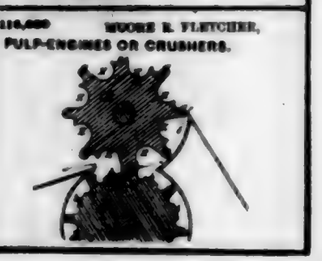
116,033 JOHN H. DICKINSON. STRAW-CUTTERS.

116,034 EMERSON DINSMAN. CLOTHES-LINE HOLDERS.

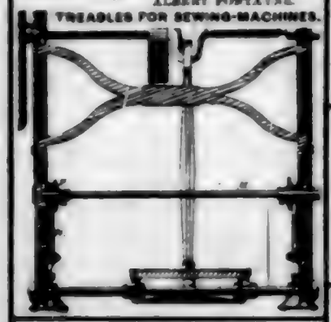


116,035 SOHRAB DIXON. TEA-KETTLE COVERS.

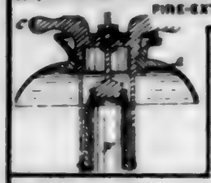
116,036 EDGAR ELTINGE. COAL-SCUTTLES.



116,037 JOEL FARRINGTON. HARVESTERS.



116,038 JOEL FARRINGTON. GEARING FOR HARVESTERS.

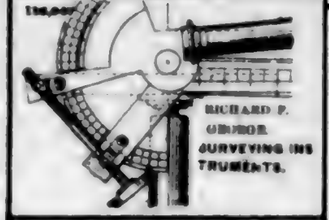


116,039 MOORE R. FLETCHER. PULP-ENGINES OR CRUSHERS.

116,040 ALBERT POSTAYNE. TREADLES FOR SEWING-MACHINES.

116,041 FORD AND KLEY. FIRE-EXTINGUISHERS.

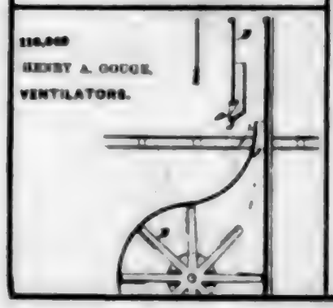
116,042 CHARLES H. FRINGS. FERMENTING MASHES.



116,043 CHARLES H. FRINGS. PREVENTING WASTE OF ALCOHOL IN FERMENTING-TANKS.

116,044 PHINEAS FROST. PAPER-PULP ENGINES.

JAMES PROVEN, EDWARD HEMMINGS AND JAMES SHELDON. MANUFACTURING RAIL-PLATES AND SHEET-STRIPS. 116,045

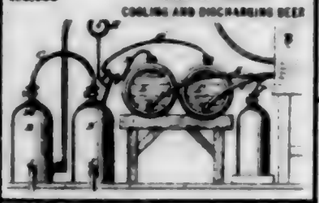


116,046 RICHARD P. GRIDER. SURVEYING INSTRUMENTS.

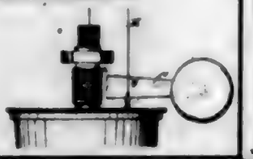
116,047 MARTIN L. GIBBS. PLOWS.

116,048 HENRY A. GOUGH. VENTILATORS.

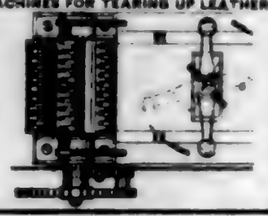
116,049 DAVID GRIM. FELLY-CLIPS



116,050 THOMAS HAINES. DIRECT-ACTING ENGINES.

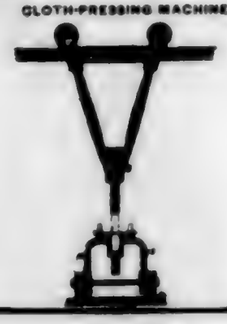


116,051 GEORGE L. HART. TRACE-LOCKS.



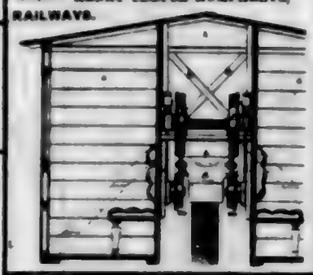
116,052 JOHN M. HEINS. COOLING AND DISCHARGING BEER

116,053 HEYL AND DIEHL. GAS-LIGHTING APPARATUS.

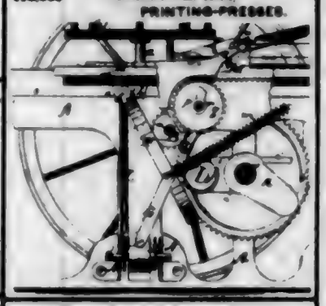


116,054 EDWARD S. HIDDEN. MACHINES FOR TEARING UP LEATHER.

ELIJAH LEAVITT HOWARD. 116,055 SAND AND EDGING-GUIDES

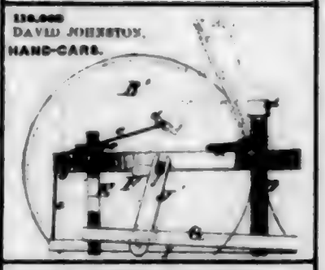


116,057 PATRICK HOWE. CLOTH-PRESSING MACHINES.

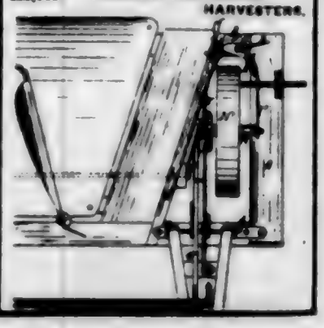


116,058 RONWORTH AND LA RUE. COOKING-STOVES.

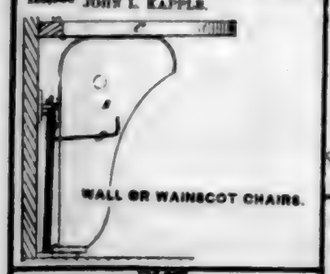
116,059 HENRY TEMPLE HUMPHREYS. RAILWAYS.



116,060 TRUMAN H. IDE. PRINTING-PRESSES.



116,061 RICHARD A. JACKSON. ROCKERS FOR CRADLES.

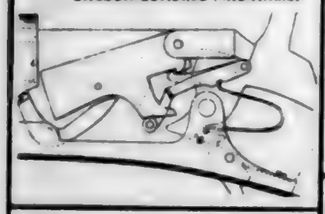


116,062 DAVID JOHNSTON. HAND-CARS.

116,063 JOHNSTON AND JENNER. HARVESTERS.

116,064 JOHN L. KAPPLE. WALL OR WAINSCOT CHAIRS.

116,065 WILLIAM H. KIMBALL. REFINING IRON AND STEEL.

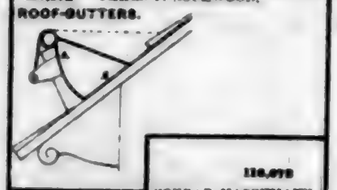


116,066 JOHN L. KIRK. MAGAZINE FIRE-ARMS.

116,067 KOOK AND SHRAWDER. TRACE-HOOK ATTACHMENTS.

116,068 JAMES LEE. BREECH-LOADING FIRE-ARMS.

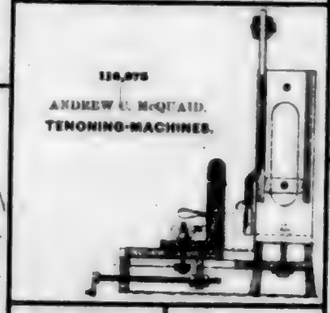
116,069 JOHN R. LEEPER. CARS.



116,070 GEORGE W. LEONARD. SIDE-HILL PLOWS.

116,071 GEORGE W. LEONARD. WATER-WHEELS.

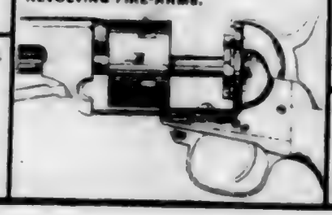
116,072 JAMES F. LOCKWOOD. ROOF-GUTTERS.



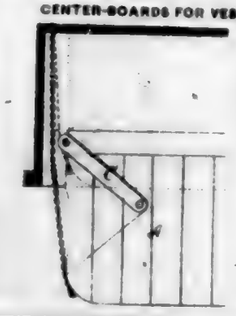
116,073 CONRAD MASCHMANN. BABY-WALKERS.

116,074 GEORGE W. MAY. SAW-SETS.

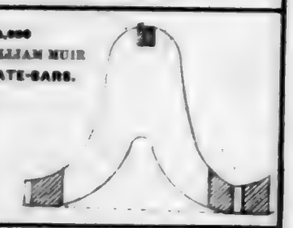
116,075 ANDREW C. McQUAID. TENONING-MACHINES.



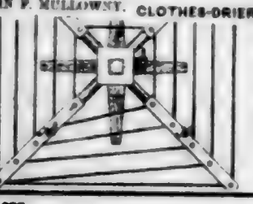
116,076 CHARLES MORRILL. MEETING-RAILS OF SASHES.



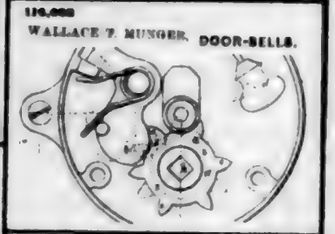
116,077 JAMES A. MORRISON. WRENCHES AND PIPE-TONGS.



116,078 MOSS AND JOHNSON. REVOLVING FIRE-ARMS.



116,079 JOHN J. MOULE. CENTER-BOARDS FOR VESSELS.

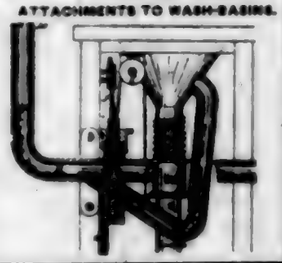


116,080 WILLIAM MUIR. GRATE-BARS.

116,081 JOHN F. MULLOWNY. CLOTHES-DRIERS.

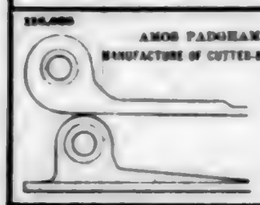
116,082 WALLACE T. MUNGER. DOOR-BELLS.

116,083 JOHN MURDOCK. APPARATUS FOR STEAMING.

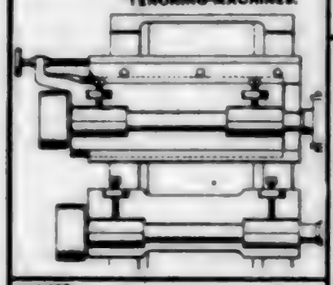


116,084 ADOLPHUS F. W. NETHABER. SAFETY-VALVES

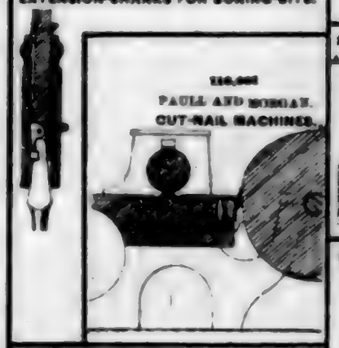
116,085 WILLIAM H. NICHOLS. SLEIGH-BELLS.



116,086 FREDERICK FORBOR, ATTACHMENTS TO WASH-BASINS.

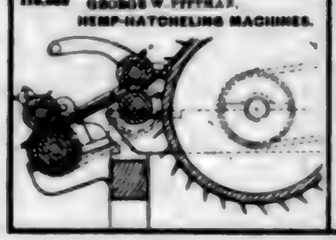


116,087 JOHN AUGUST OSTBURG, BUTTON-NEEDLES AND FASTENERS.

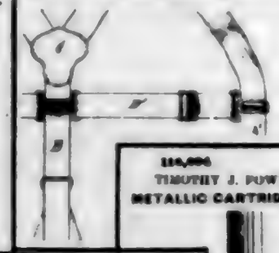


116,088 AMOS PADGHAM, MANUFACTURE OF CUTTER-BAR HEADS

116,089 GEORGE W. PASSEL, TENONING-MACHINES.

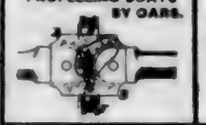


116,090 WILLIAM S. PATTIN, EXTENSION-SHANKS FOR BORING-BITS.

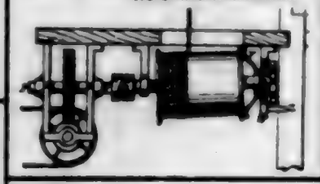


116,091 PAUL AND MORGAN, CUT-NAIL MACHINES.

116,092 GEORGE W. PITTMAN, HEMP-HATCHELING MACHINES.

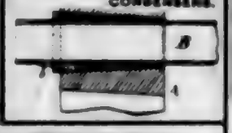


116,093 POTTER AND SMITH, SUSPENDER AND SHOULDER-BRACES.

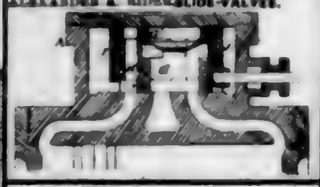


116,094 TIMOTHY J. POWERS, METALLIC CARTRIDGES.

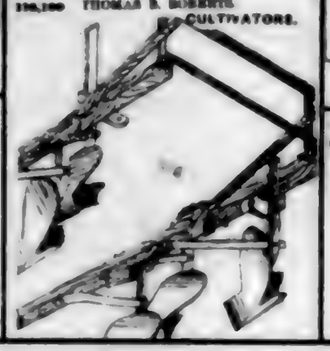
116,095 THOMAS G. PRINGLE, PROPELLING BOATS BY OARS.



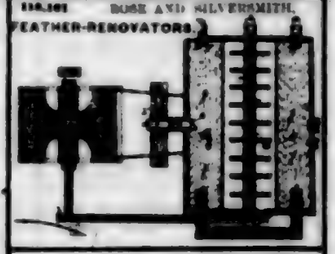
116,096 HENRY J. REEDY, HOISTING-MACHINES.



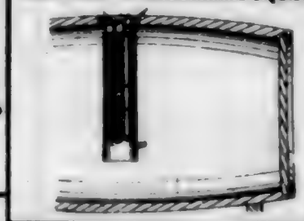
116,097 HENRY C. REICHARD, POLICE-BATONS.



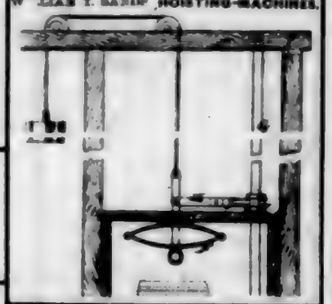
116,098 GEORGE H. REYFOLDS, TUBE-FASTENINGS OF CONDENSERS.



116,099 ALEXANDER K. RIDER, SLIDE-VALVES.



116,100 THOMAS B. ROBERTS, CULTIVATORS.



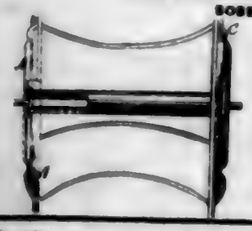
116,101 ROSE AND SILVERSMITH, FEATHER-RENOVATORS.

116,102 GEORGE L. RUNDLE, TREATMENT OF SACCHARINE LIQUIDS.

116,103 WILLIAM T. SAMP, HOISTING-MACHINES.

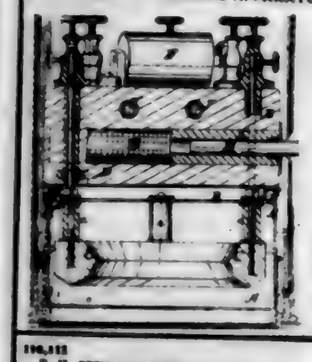
116,104 WILLIAM P. SKIPPLESTOT, BOILERS.

116,105 WILLIAM S. SMOOT, METALLIC CARTRIDGES.

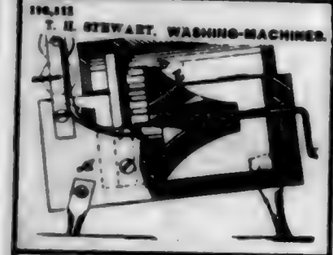


116,106 WILLIAM S. SMOOT, BREECH-LOADING FIRE-ARMS.

116,107 WILLIAM H. SPERLING, BOTTLE-CAPPING MACHINES.

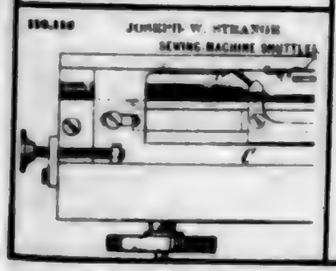


116,108 JOHN S. STEARNS, BOBBINS.

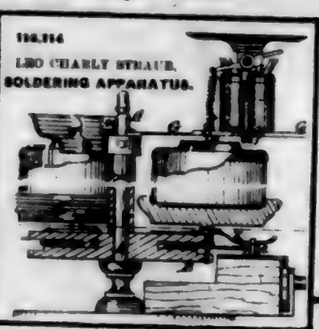


116,109 GEORGE STECK, GRAND PIANOS.

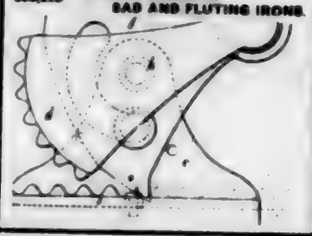
116,110 ALBERT J. STEELE, MEDICAL APPARATUS



116,111 T. H. STEWART, WASHING-MACHINES.



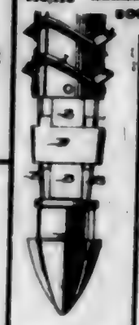
116,112 LIVINGSTON STONE, FISH-HATCHING APPARATUS.



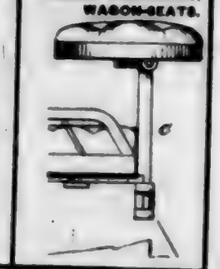
116,113 JOSEPH W. STRATTON, SEWING-MACHINE SHUTTLES.

116,114 LEO CHARLY STRAUB, SOLDERING APPARATUS.

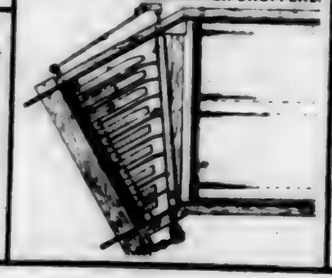
116,115 JOSHUA B. SWIFT, SAD AND FLUTING IRONS.



116,116 E. G. SWIFT, SOWING PULVERULENT MANURES.

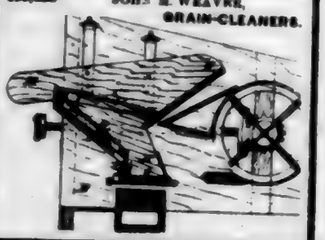


116,117 WILLIAM M. TILESTON, GAME-SIGNALS.



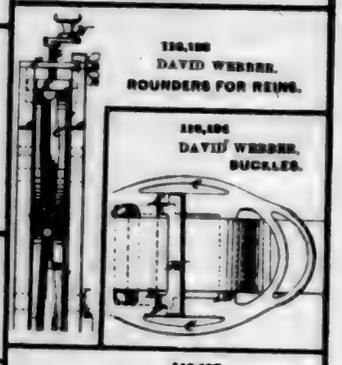
116,118 HERMANN VOELKER, BOILER-FLUE SCRAPERS.

116,119 HENRY WALLSTEDT, WAGON-SEATS.

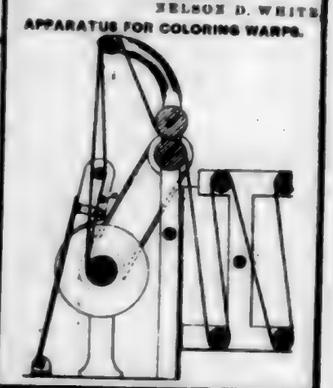


116,120 WALLIS AND WALLIS, HARVESTER-DROPPERS.

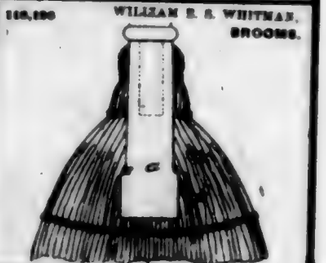
116,125 LEWIS WARD, LAMP-CHIMNEY CLEANERS.



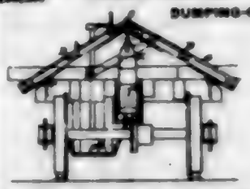
116,126 JOHN M. WEAVER, GRAIN-CLEANERS.



116,127 DAVID WEBBER, ROUNDERS FOR REINS.

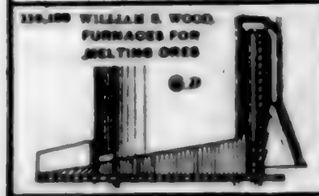


116,128 DAVID WEBBER, BUCKLES.

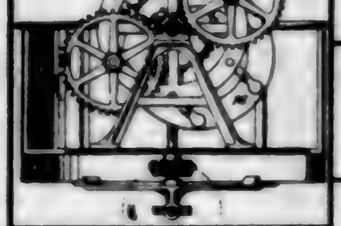


116,129 NELSON D. WHITE, APPARATUS FOR COLORING WARPS.

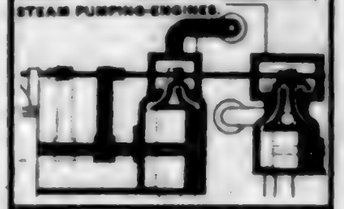
116,130 WILLIAM R. S. WHITMAN, BROOMS.



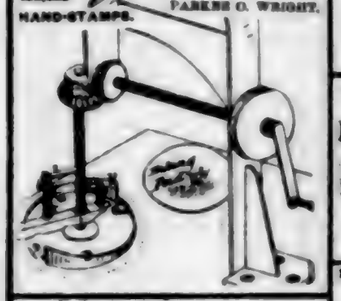
116,127 JACOB C. WISWELL. DUMPING-CARS.



116,128 DAVID LUDWIG WOLFF. FLOOR-COVERINGS, ROOFS



116,129 WILLIAM S. WOOD. FURNACES FOR MELTING ORES



116,130 JACOB WOOLF. PROPELLING APPARATUS

116,131 HENRY R. WORTHINGTON. STEAM PUMPING-ENGINES.

116,132 HARRY G. WRIGHT. HAND-STAMPS.

116,133 RUFUS WRIGHT. FOLDING EASELS.

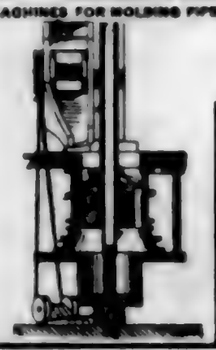
116,134 JAMES TOOMB, JR. SPLIT CASTINGS.

116,135 WILLIAM J. ANDREWS. CURE OF SCIATICA.

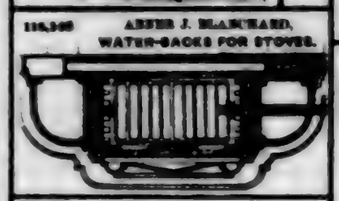
116,136 JOSE M. AGUATO. TOBACCO-CUTTERS.

116,137 WILLIAM G. BARKER. BUCKETS FOR CHAIN-PUMPS.

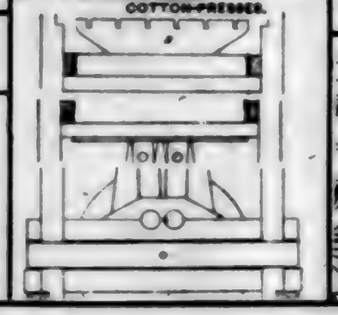
116,138 WILLIAM HENRY BALMAIN. MANUFACTURE OF GLASS.



116,139 WILLIAM H. BARTHOLOMEW. SLATE-FRAMES.



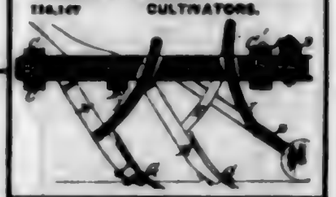
116,140 CHARLES T. BEARDSLEY. BROOM-HOLDERS.



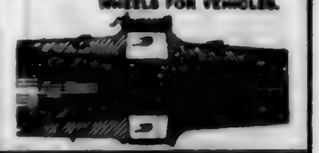
116,141 BENJAMIN S. BENSON. MACHINES FOR MOLDING PIPES.

116,142 ABNER J. BLANCHARD. WATER-BACKS FOR STOVES.

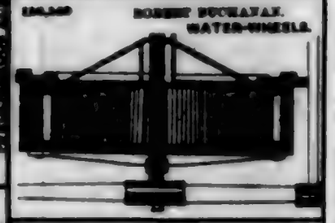
116,143 JAMES P. BOLIN. COTTON-PRESSES.



116,144 HENRY BRAUNHOLD. FUR-BOXES.



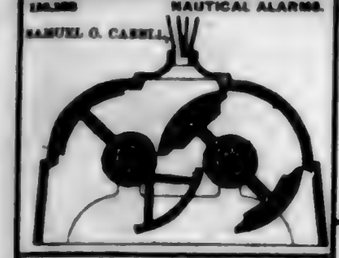
116,145 PHILIP BRECHER. FIRE-PLACES.



116,146 THOMAS R. C. BRIELY. CULTIVATORS.

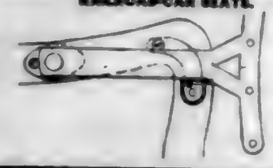
116,147 MARSHALL B. BROWN. WHEELS FOR VEHICLES.

116,148 ROBERT BUCHANAN. WATER-WHEELS.



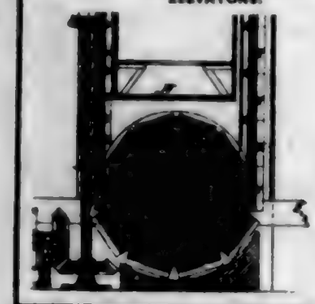
116,149 CHARLES M. BURR. BASH-HOLDERS.

116,150 BUTTON AND BUTTON. STEAM FIRE-ENGINES.

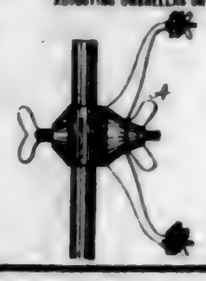


116,152 SAMUEL O. CASNER. NAUTICAL ALARMS.

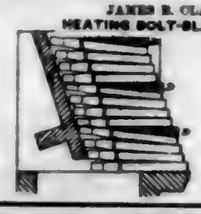
116,153 MILO CARPENTER. HINGED HAY-RACKS.



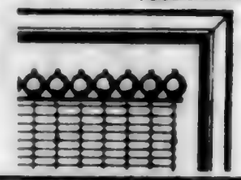
116,154 DEXTER H. CHAMBERLAIN. RAILROAD-CAR SEATS.



116,155 DEXTER H. CHAMBERLAIN. TAPS OR FAUCETS FOR BOTTLES.

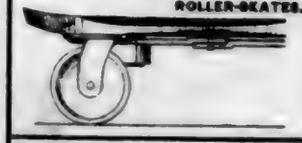


116,156 DEXTER H. CHAMBERLAIN. ELEVATORS.



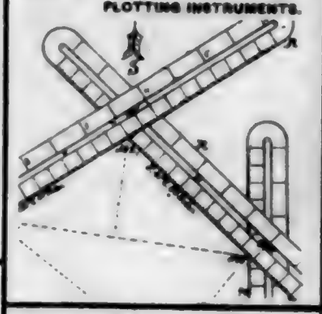
116,157 GEORGE F. CHILD. ADJUSTING UMBRELLAS ON VEHICLES.

116,158 JAMES B. CLARK. HEATING BOLT-BLANKS.

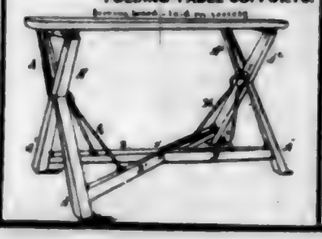


116,159 HUGH W. COLLENDER. POOL-BOARDS.

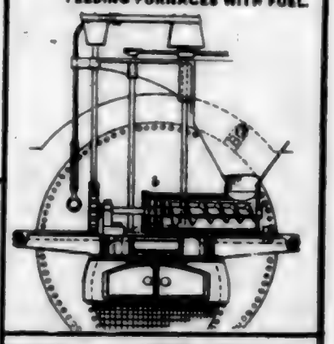
116,160 JAMES L. CORBIN. RUNNING-GEARS FOR VEHICLES.



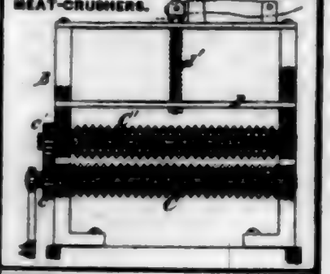
116,161 ALLEN THOMPSON COVELL. ROLLER-SKATES.



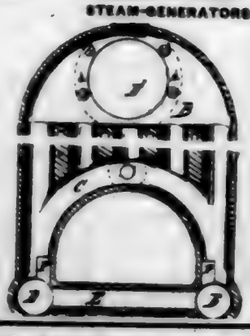
116,162 JAMES M. COWLES, IN SASH-HOLDERS.



116,163 JAMES B. CRUPPER. PLOTTING INSTRUMENTS.

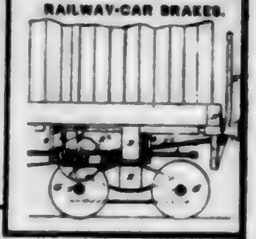


116,164 JOSEPH DALY. FOLDING-TABLE SUPPORTS.

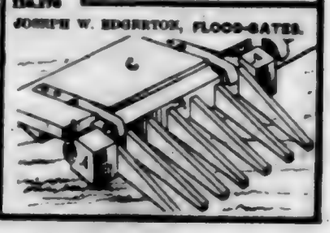


116,165 GEORGE FREDERICK DRACOK. FEEDING FURNACES WITH FUEL.

116,166 OLIVER P. DENNISON. MEAT-CRUSHERS.



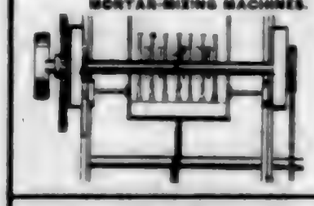
116,167 ERASMUS P. DOTEN. STEAM-GENERATORS.



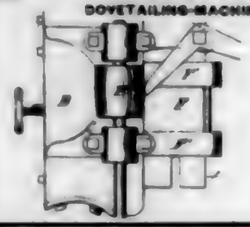
116,168 GEORGE DRAPER. HOLDING SPINNING-RODDING OR SPINDLES.

116,169 CHARLES B. EATON. RAILWAY-CAR BRAKES.

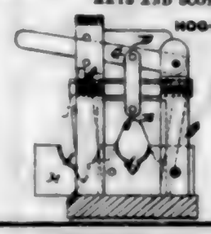
116,170 JOSEPH W. EDGERTON. FLOOD-GATES.



116,173 ALBERT G. ELLITHORPE. DREDGING-SCOOPS.



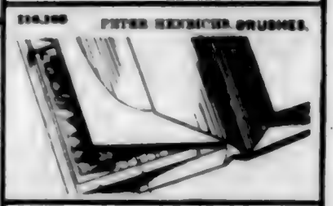
116,177 GRIDLEY AND ENGELKENSMEN. LANTERNS.



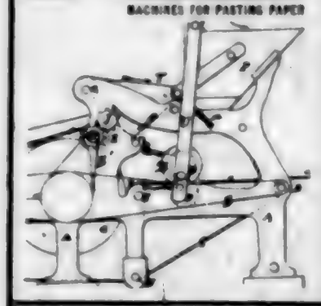
116,178 ALBERT G. ELLITHORPE. MORTAR-MIXING MACHINES.

116,179 GRIFFIN AND WILKINS. DOVETAILING-MACHINES.

116,180 MATS AND SCOTT. HOG-STOCKS.

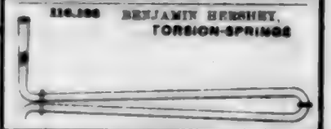


116,181 PETER HENRICHS. FOLDING BRUSHES.

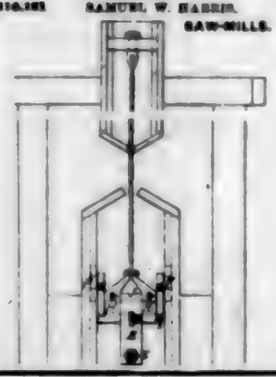


116,179 JAMES A. GRIFFITH. BLOW-OFF PIPES

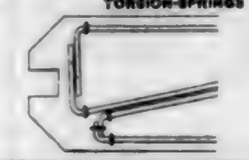
116,182 PETER HENRICHS. BRUSHES.



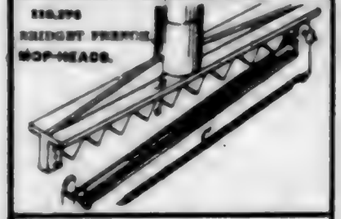
116,175 MAURICE FITZGERBONS. MACHINES FOR PASTING PAPER



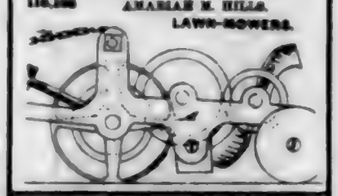
116,180 J. WILLIAM GROOMES. ENVELOPES.



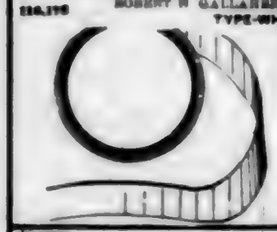
116,183 BENJAMIN HERSHEY. TORSION-SPRINGS



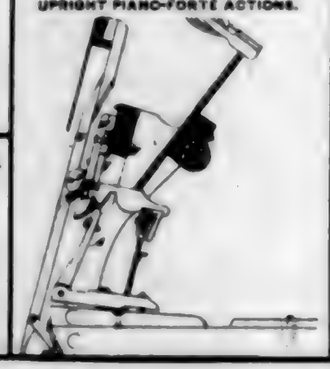
116,184 SAMUEL W. HARRIS. SAW-MILLS.



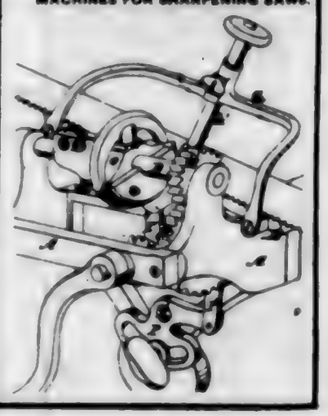
116,187 HERSHEY AND GAGGIN. TORSION-SPRINGS



116,176 BRIDGET FRENCH. MOP-HEADS.

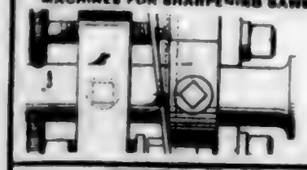


116,186 AMARIAH M. HILLS. LAWN-MOWERS.



116,174 ROBERT N. GALLAHER. TYPE-WHEELS

116,188 A. HORACE HASTINGS. UPRIGHT PIANO-FORTE ACTIONS.

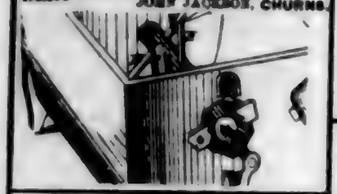


116,189 HIEBS AND BEYER. MACHINES FOR SHARPENING SAWS.

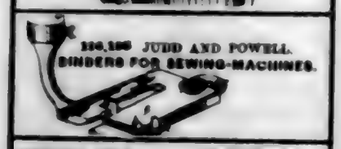
116,172 HENRY GERBER. GAS-REGULATORS.

116,190 HIEBS AND BEYER. MACHINES FOR SHARPENING SAWS.

116,191 CHARLES H. HUDSON. SELF-PROPELLING SLEIGHS.



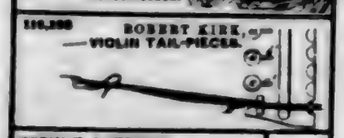
116,192 LESTER T. HULBERT. CORN-SHELLERS.



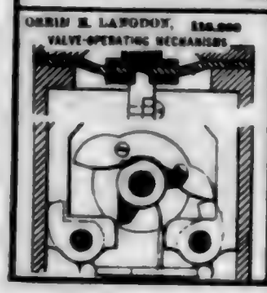
116,193 WILLIS M. HUFT. WHEELS FOR VEHICLES.

116,194 JOHN JACKSON. CHURNS.

116,195 JUDD AND POWELL. BINDERS FOR SEWING-MACHINES.



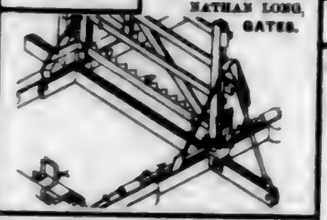
116,196 PHILIP KERR. GATE SPRINGS.



116,197 JEROME KIDDER. SPONGE-HOLDER.

116,198 ROBERT KIRK. VIOLIN TAIL-PIECES.

116,199 ORRIN H. LAWDON. VALVE-OPERATING MECHANISMS



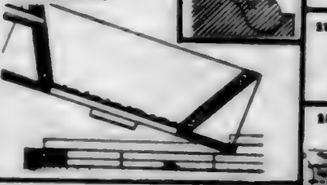
116,200 WILLIAM KLINGBEIL. MEDICAL COMPOUNDS OR EYE BALSAMS.

116,201 CARL G. LARSON. BESSEMER PROCESS OF TREATING IRON

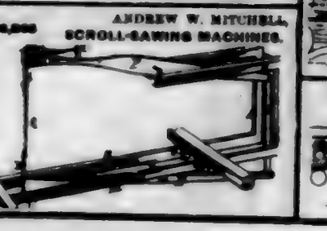
116,202 NATHAN LONG. GATES.

116,203 JAMES MACFARLANE. SILK-WINDING APPARATUS.

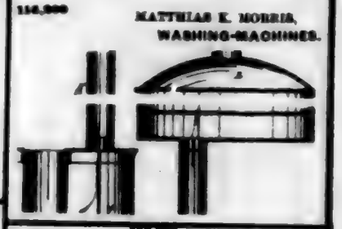
116,204 SUGAR-COATING PILLS. FREDERICK MARRIOTT.



116,205 MICHAEL MARTIN. VELOCIPEDES.

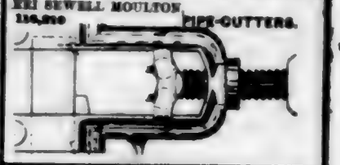


116,206 JOSEPH H. MASON. FORGING CARRIAGE-SPRING HEADS.



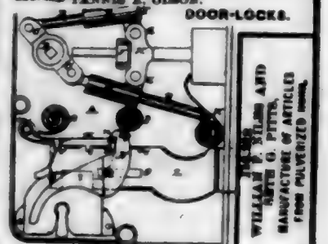
116,207 ALONZO D. McMASTER. COAL-SIFTERS.

116,208 ANDREW W. MITCHELL. SCROLL-SAWING MACHINES.



116,209 MATTHIAS E. MORRIS. WASHING-MACHINES.

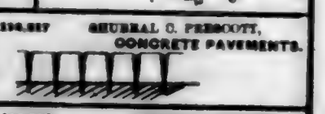
116,210 ADOLPH MÜLLER. DYEING AND COLORING FURS.



116,211 ERI SEWELL MOULTON. PIPE-CUTTERS.

116,212 WILSON NEWCOMB. TACKLE-HOOKS.

116,213 TANNIS A. OLSON. DOOR-LOCKS.

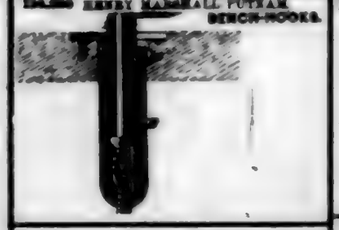


116,214 WILLIAM T. WILSON AND HIRAM G. PITTS. MANUFACTURE OF ARTICLES FROM PULVERIZED IRON.

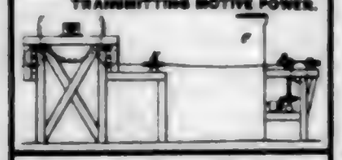
116,215 ROGERS J. BROOKS. COMPOUNDS FOR CURLING HAIR.

116,216 GEORGE H. PRATT. CLIPPING-SHEARS.

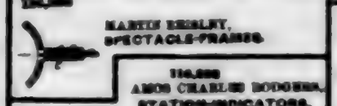
116,217 SHUBRAL C. PRESCOTT. CONCRETE PAVEMENTS.



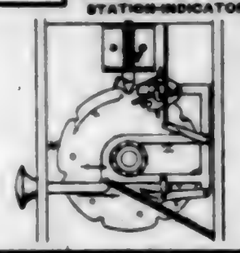
116,218 TREAT T. PROMMER. FORMING SPIRAL GROOVES ON METALLIC RODS.



116,219 MAKING METALLIC SHOE-PEGS. TREAT T. PROMMER.

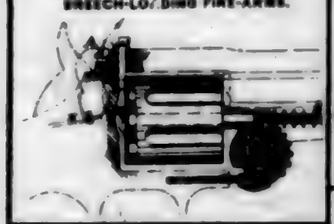


116,220 HENRY MARSHALL PUTNAM. BENCH-HOOKS.

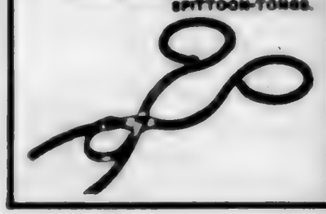


116,221 JAMES HOLMOUD. TRANSMITTING MOTIVE POWER.

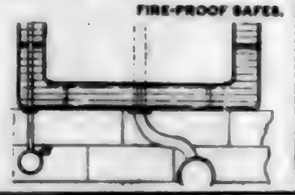
116,222 MARTIN BEDLEY. SPECTACLE-FRAMES.



116,223 AMOS CHARLES HODGMAN. STATION-INDICATORS.



116,224 RUSSELL AND PLATT. LAMP-SUPPORTERS.

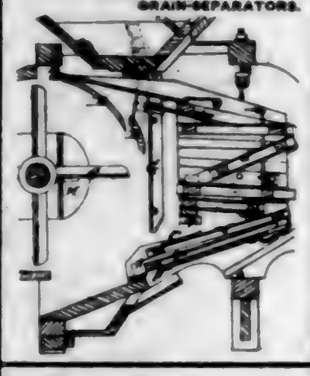


116,225 GEORGE W SCHOFIELD. BREECH-LOADING FIRE-ARMS.

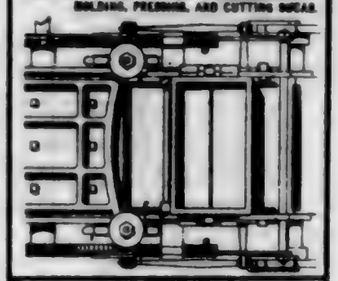
116,226 ABRAHAM H. GRIPT. SPITTOON-TONGS.

116,227 WILLIAM HAMILTON SHORT. FIRE-PROOF SAFES.

116,228 MILO SMITH. STOVE-PIPE SHELVES.



116,229 EDWARD G. SHORTT. FASTENING PULLEY AND WHEEL HUB



116,230 ROLAND H. SMITH. STREET-LAMPS.
